

## Need help with Edulink?

CentAL @ your service

### What is Edulink?

**EDULINK** is the name of the interactive, online learning environment at UJ.

Lecturers decide if and how they want to use Edulink in the modules which they teach. For example, they could use Edulink to:

- Communicate to their students the general administrative information such as their contact details of lecturers, publish module-specific announcements and calendar events.
- Provide their students opportunities to take part in online discussions or to make available additional reading material.
- Create assignment submission areas on Edulink so that the system manages all their students' submissions and to check student papers for possible traces of plagiarism.
- Provide students with self-assessment activities.
- Set up class tests, semester tests or formal examinations which then take place on Edulink in pre-booked computer labs on the four campuses of the University.
