

Bachelor Of Arts In Sport Development (B9S03Q)

Full-time only

Purpose

Successful students will have acquired the intellectual competencies and practical skills to enable them to become practitioners in the field of Sport Development.

Outcomes

This field entails three levels: Firstly on the micro-level it deals with the study of the development of individual competencies with regard to movement. Secondly on the meso-level it refers to the way in which community development can be facilitated through participation in sport and recreation and the establishment of facilities. Thirdly on the macro-level the possible positive social impact of sport and recreation on society generally towards the enhancement of the quality of human life is studied. This then implies the acquisition, analysis, interpretation and application of social science principles related to the context of sport development. Students will develop the ability to discuss and investigate human conduct and interaction in sport and recreation, particularly in the South African context.
