OF
JOHANNESBURG

The Future
Reimagined

BSc in Applied Physics now offered at UJ!

Take advantage of the fourth industrial revolution with the University of Johannesburg's new Four Year Degree Programme in Applied Physics.

Applied Physics is the interface between fundamental physics and engineering science and cuts across all phenomena that are central to the existence of humankind. The Applied Physics degree at the University of Johannesburg will prepare students for a variety of exciting careers in Science and Technology, and provide graduates with an innovative edge to take advantage of the immense benefits associated with the fourth industrial revolution. The degree provides a pragmatic balance between fundamental and applied physics with a strong emphasis on the development of problem-solving skills. The degree includes research at an undergraduate level, which serves to ensure that graduates are familiar with the latest scientific developments.
