HS iii MINIMUM PROGRAMME ADMISSION REQUIREMENTS

Award yourself points for each Grade 11 or Grade 12 subjects that you have passed according to the table provided below.

How to determine your Admission Point Score (APS):

An Admission Point Score (APS), explained below, has been developed for the National Senior Certificate (NSC) and the Independent Examinations Board (IEB) based in the achievement rating of each subject. The total APS is the sum of the achievement ratings of the six school subjects. Life Orientation is not counted in the calculation of the APS.

Rules to be implemented with this development:

In order to determine the Admission Point Score (APS) the following principles need to be taken into consideration:

- Applicants with the following results, WAEC, Diploma or Exam D'Etat, Certificado de Habilitacoes Literarias, Ensino Medio and Baccalaureat should be linked with the Ordinary Level (O) Grades on ITS.
- Applicants with the following results, HIGCSE, NSSC (HL), AS Level, IB (SL) and KCSE should be linked to the South African NSC (N) Grades on ITS.
- Applicants who have set for either A Level of IB (HL) should be linked to the (A) Grades on ITS.

ADMISSION POINT SCORE (APS) TABLE

APS	NATIONAL			INTERNATIONAL											
	NSC (IEB/SACA/ISC)	SC HG (M-SCORE)	SC SG (M-SCORE)	HIGCSE / NSSC (HL)	IGCSE / NSSC (OL)	AS LEVELS	A LEVELS	IB (HL)	IB (SL)	WAEC	KCSE	Diplome / Exam D' Etat	CHL / EM	Baccalaureate	AHSD
10							A/A*	7							
9							B	6							
8							C	5							
7	7 (80-100%)	A		1		A/A* (7)	D	4	7		A				A
6	6 (70-79%)	B	A	2		B (6)	E	3	6		B				B
5	5 (60-69%)	C	B	3	A/A* (9-7)	C (5)		2	5	A	C	80-100%	16-20	16-20	C
4	4 (50-59%)	D	C	4	B (6-5)	D (4)		1	4	B	D	70-79%	14-15	14-15	D
3	3 (40-49%)	E	D		C (4)	E (3)			3	C	E	50-69%	10-13	10-13	
2	2 (30-39%)	F	E		D/E (3)				2	D/E	F	30-49%	8-9	8-9	
1	1 (0-29%)	G	F		F/G (2-1)				1	F/G	G	0-29%	0-7	0-7	

ABBREVIATIONS

NSC - National Senior Certificate (completed Grade 12 in and after 2008)
SC HG - Senior Certificate Higher Grade (completed Grade 12 before 2008)
SC SG - Senior Certificate Standard Grade (completed Grade 12 before 2008)
IEB - Independent Examination Board
ISC International Secondary Certificate
SACAI South African Comprehensive Assessment Institute
HIGCSE - Higher International General Certificate of Secondary Education
IGCSE - International General Certificate of Secondary Education
NSSC(HL) - Namibia Senior Secondary Certificate (Higher Level)
NSSC(OL) - Namibia Senior Secondary Certificate (Ordinary Level – Cambridge)
AS - Advanced Subsidiary Level (Cambridge)
A Level - Advanced Level (Cambridge)
IB(HL) - International Baccalaureate Schools (Higher Levels)
IB(SL) - International Baccalaureate Schools (Standard Levels)
WAEC - West African Examination Council
KCSE - Kenya Certificate of Secondary Education
Diplome/Exam D'Etat - Diplome d'Etat or d'Etudes Secondaire du Cycle
CHL/EM - Certificado de Habilitacoes Literarias (Mozambique) / Ensino Medio (Angola)
Baccalaureate - Gabonese School Leaving
AHSD - American High School Diploma

Points are awarded for the six symbols on your Final Grade 11 or Final Grade 12 report, see example below.

School Subject	Marks	APS
First Language (language of teaching and learning)	65%	5
Additional recognized language	71%	6
Mathematics or Mathematical Literacy	61%	5
Accounting	68%	5
History	81%	7
Geography	86%	7
Total		35

** Life Orientation is not counted in the calculation of the total APS.*

Compliance with the minimum programme admission **requirements does not guarantee a place or space in a programme**. The General Academic Regulations of the University applies in each case.

HS iv EXEMPTIONS

Students may apply for module exemptions after they have registered for the current academic year. Application forms are available from the Faculty Administration Office. The closing date for submission is the end of **March** each academic year.

Students should in particular take note of the following general **Academic Regulations (AR8)** of the University:

An HOD may, in consultation with the Executive Dean or their delegated authority, in accordance with a list of exemptions approved by the Executive Dean, grant exemption from and award a credit for a module of which the content of the module was at least 80% the same, to students on the grounds that they have passed a relevant module at the University or at another accredited higher education institution. Applications for exemptions must be submitted during the registration period.

Exemption from and awarding of credits for modules, as stipulated in **AR 8.1**, may not be granted for more than half the number of NQF credits required in an undergraduate programme in which exemption and recognition are requested. A faculty may determine rules and regulations in this regard in agreement with the existing Faculty Rules and Regulations, and subject to approval by Senate. At least half the number of NQF credits at the exit-level, should be passed at the University, for UJ to award the diploma or confer the degree. The Executive Dean or their delegated authority concerned, in consultation with the Registrar, may give permission to the student (for legitimate reasons) to complete such exit-level module(s) at another HEI in South Africa, or abroad in accordance with the academic record/transcript concerned.

Only in exceptional circumstances may the Executive Dean or their delegated authority grant exemption from an exit-level or a semester core module that has been passed at another institution or in another programme.

As per the HEQSF, a maximum of 50% of the credits of a completed qualification may be transferred to another qualification, provided that no more than 50% of the credits required for the other qualification are credits that have been used for a completed qualification.

Students may not register simultaneously for (a) two programmes at the University, or (b) for a programme or module at another university, concurrently with their registration at the University without prior written consent of the Executive Dean of the relevant faculty, in consultation with the Registrar, and the relevant authority of the other university. (**AR5.1.18**).

HS v RECOGNITION OF PRIOR LEARNING:

The Faculty of Health Sciences follows the University policy on the Recognition of Prior Learning. This policy is available on the University of Johannesburg website (www.uj.ac.za/admission-aid/recognition-of-prior-learning/).

HS vi ASSESSMENT:

Assessment in all programmes takes place in accordance with the University policy on assessment. This policy is available on the University of Johannesburg website (www.uj.ac.za/wp-content/uploads/2023/04/assessment-policy.pdf). The criteria for assessment in all modules are available in learner guides.

HS *vii* DISTINCTION CRITERIA

Obtaining a qualification (AR11.6)

Students obtain a qualification if they have passed every module prescribed for a programme and have successfully completed service or work-integrated learning, where applicable. It is the student's responsibility to ensure all prescribed modules, service or work-integrated learning are completed.

A qualification is awarded or conferred with distinction if the requirements stipulated in **AR11.6.4** (a) to (d) are met as applicable to the particular qualification.

No rounding (up or down) should be done during the calculation process. The rounding of marks should only be done once all calculations are finalised in accordance with decisions made by the Faculty Assessment Committee or similar.

(a) Undergraduate qualifications (Contact)

The qualification must be completed within the minimum duration as indicated in **AR 10 Table 3**, unless the Executive Dean has approved a longer duration of study for legitimate reasons.

- (i) Students must achieve a weighted and/or proportional calculated average final mark of at least 75% as determined by the Faculty Board, approved by Senate and contained in the Faculty Rules and Regulations. The weighting of the individual modules must be in line with the proportional value of the NQF credits of the module within the qualification.
- (ii) A student must obtain a minimum mark of 65% in every prescribed module at NQF Level 6 for diplomas, or NQF Level 7 for degrees, or NQF Level 8 for professional bachelor's degrees. Exceptions may be considered by the Executive Dean where the qualification resides.
- (iii) A student must never have failed a module in the relevant qualification.
- (iv) Students must have been registered for the full curriculum as prescribed for each academic year on a full-time or part-time basis.
- (v) If students have transferred from another higher education institution to UJ in a similar qualification, the same requirements as stated shall apply.
- (vi) If students change qualifications within UJ, only the modules related to the new qualification will be taken into consideration in calculating whether the qualification is obtained with distinction.
- (vii) In the case where there is work-integrated education involved; the work integrated module should not be used in the calculation if the module is not DHET funded.

(b) Advanced Diplomas, Postgraduate Diplomas and Honours Degrees (Contact)

- (i) The qualification must be completed within the minimum duration as indicated in Table 3, unless the Executive Dean has approved a longer duration of study for legitimate reasons.
- (ii) Students must achieve an average final mark for an advanced diploma, a postgraduate diploma or an honours degree of at least 75%. For the purposes of calculating the weighted average, the final marks for all the modules comprising the qualification must be in accordance with the NQF credit value allocated to the modules as determined by the Faculty Board, approved by Senate and contained in the Faculty Rules and Regulations.
- (iii) A student must obtain a minimum mark of 65% in every prescribed module at NQF Level 7 for advanced diplomas/BTechs, and at NQF Level 8 for postgraduate

diplomas and honours degrees. Exceptions may be considered by the Executive Dean where the qualification resides.

- (iv) A student must never have failed a module in the relevant qualification.
- (v) Students must have been registered for the full curriculum as prescribed for each academic year on a full-time or part-time basis.
- (vi) If students have transferred from another higher education institution to UJ in a similar qualification, the same requirements as stated shall apply.
- (vii) If students change qualifications within UJ, only the modules related to the new qualification will be taken into consideration in calculating whether the qualification is obtained with distinction.

(c) Master's Degrees

- (i) Students for a research master's qualification must achieve a final mark of at least 75% for the dissertation.
- (ii) Students for a coursework master's qualification must achieve a final average mark of at least 75%. This is calculated by weighting the average final marks for all the coursework modules and the final mark for the minor dissertation/research report in accordance with the credit values allocated to all the coursework modules and the minor dissertation, respectively. For example, if the credit value of the minor dissertation represents 40% of the total credit value of the qualification, the average final mark for the qualification will be weighted in the proportion of 40% for the minor dissertation and 60% for all the coursework modules.
- (iii) If students have transferred from another higher education institution to UJ in a similar qualification, the same requirements as stated shall apply.
- (iv) If students change qualifications within UJ, only the modules related to the new qualification will be taken into consideration in calculating whether the qualification is obtained with distinction.

(d) Distance (Fully Online) programmes

- (i) Undergraduate qualifications must be completed within the maximum duration as indicated in Table 3, in Column F.
- (c) An advanced diploma, a postgraduate diploma or an honours degree must be completed within the maximum duration as indicated in Table 3, in Column F.
- (d) The average final mark for the qualification will be calculated according to the type of qualification such as undergraduate or postgraduate.
- (iv) Apart from coursework master's, students must obtain a minimum mark of 65% in every prescribed module at the relevant NQF level for the specific qualification type.
- (i) Apart from coursework master's, students must never have failed a module as a first attempt in the relevant qualifications.
- (ii) Students must have been registered for the full curriculum as prescribed for each academic year.
- (vii) If students have transferred from another higher education institution to UJ in a similar qualification, the same requirements as stated shall apply.
- (viii) If students change qualifications within UJ, only the modules related to the new qualification will be taken into consideration in calculating whether the qualification is obtained with distinction.

HS viii EXPOSURE TO INFECTIOUS AGENTS

In terms of the UJ policy adopted regarding students who are exposed to infectious agents, students who will interact with live patients in a clinical or related environment within the Faculty of Health Sciences are required to be vaccinated against Hepatitis B due to the risk of exposure. During orientation and or at the first contact session every student who will interact with live patients in a clinical or related environment will be issued with a letter which will inform them about the importance of immunization against Hepatitis B as well as the fact that it is mandatory to be vaccinated. Students are to sign for receipt for the letter and a copy will be held on their student file.

At the start of the second term students would need to sign a document stating that they have previously been exposed or received/commenced these vaccinations. By virtue of the signature on that document students confirm that they have been previously exposed/vaccinated/commenced vaccination against Hepatitis B and that they understand that false declaration constitutes fraud and that they may face disciplinary actions and medical consequences that may arise from a false declaration.

Potentially exposed students who have not started with or been exposed / vaccinated against Hepatitis B when commencing their studies in the Faculty of Health Sciences may have it done at the Primary Health Services situated on the various campuses. Vaccinations need to commence within the first month after registration. Please note that all the costs for these vaccinations are to be paid for by the student. Students may visit the Centre for Student Health and Wellness (Primary Health Care clinic) on campus to establish the cost of the vaccinations and the procedure that needs to be followed. These vaccinations may also be done at any other registered medical provider which offers this service. In some instances, medical aid may cover the cost. Hepatitis B injections commence and are then repeated 1 month and 6 months later. Blood tests would need to be done 1 month after the last injection to establish whether the body had developed sufficient immunity against Hepatitis B. If not, booster dosages would need to be administered and the blood tests repeated. These blood tests would need to be done by a private laboratory at the cost of the student. Students who were previously exposed or received the vaccinations, would also need to determine with a blood test whether sufficient immunity has been developed against the disease.

It is strongly recommended that students who work with patients be examined for Tuberculosis before commencement of their studies and also be vaccinated against Hepatitis A, Tetanus, Meningitis, Varicella, Mumps, Measles, Rubella (if not exposed or vaccinated to these diseases before) and annually for influenza.

The University will not be held liable for any consequences resulting from an accidental exposure to any of the above infectious agents by the student.

The University has insurance with Marsh for accidental exposure to HIV due to work integrated learning.

Everybody on a UJ campus, including students, have to comply with the regulations and safety measures of UJ.

HS ix AFRICAN INSIGHTS / ARTIFICIAL INTELLIGENCE IN THE 4IR

It is compulsory that undergraduate students complete one of the below online modules:

1. African Insights introduces students to the intellectual traditions and debates in Africa. This module is for all undergraduate students of the Faculty or College. Upon completing the module, a students' academic record will reflect the successful completion of the module. These credits do not count towards the completion of a qualification. This is a fully online module that is offered over thirteen weeks. All student support will take place online.
2. Artificial Intelligence (AI) in the 4IR introduces undergraduate students to the applications and implications of the AI in the society, and the future of work in the Fourth Industrial Revolution (4IR). This module is for all undergraduate students of the Faculty or College. Upon completing the module, a students' academic record will reflect the successful completion of the module. These credits do not count towards the completion of a qualification. This is a fully online module that is offered over thirteen weeks. All student support will take place online.

B FACULTY REGULATIONS

These regulations should be read in conjunction with the Academic Regulations of the University of Johannesburg.

HS1.0 DEPARTMENT OF BIOMEDICAL SCIENCES

HS1.1 BACHELOR OF HEALTH SCIENCES IN MEDICAL LABORATORY SCIENCES (B9B01Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS1.1.1 Purpose

The purpose of the Bachelor of Health Sciences in the Medical Laboratory Sciences programme is to produce competent graduates to apply theoretical and practical fundamental knowledge and skills in the fields of medical science and research. The programme provides extensive theoretical knowledge and practical training about various related modules and experiential training. The outcome of these combined offerings results in the achievement of the purpose of the qualification as stipulated in the curricula. This qualification leads to registration with the Health Professions Council of South Africa as a Medical Laboratory Scientist.

HS1.1.2 Outcomes

1. Laboratory operations in clinical diagnostic laboratories and related fields are performed in compliance with statutory requirements for ethics, safety and quality assurance and with accuracy and precision. Specified laboratory equipment is maintained and used according to SOPs.
2. Laboratory results are interpreted correctly and integration of laboratory tests with pathophysiological conditions (Pathology) in a specific field of specialisation in accordance with statutory and operations requirements is achieved.
3. Supervisory, management and research skills are developed.
4. Critical evaluation of current and new trends in technology to improve practices and to solve problems in a variety of contexts is developed.
5. Evaluation of new information, concepts and evidence from a range of sources and the academic skills, values and attributes necessary to undertake independent research in the field of Medical Laboratory Sciences, in compliance with legislated and ethical research principles are acquired.
6. Management and entrepreneurial skills in the context of Medical Laboratory Sciences are applied.
7. Work behaviour is satisfactory with regard to time-keeping, following instructions, professional behaviour etc.

HS1.1.3 Rules of access and admission requirements

A Senior Certificate with Matriculation exemption, or an equivalent qualification at an equivalent standard as determined by a Status Committee, with the following compulsory subjects:

1. Biology with at least a Higher Grade C or Standard Grade B symbol.
2. Physical Science with at least a Higher Grade D or Standard Grade C symbol.
3. Mathematics with at least a Higher Grade D or Standard Grade C symbol.
4. English with at least a Higher Grade C or Standard Grade B symbol.

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
30	5	4	Not accepted	4	5

Selection criteria

Selection is based on academic merit, and an interview (if required).

HS1.1.4 Pass requirements

1. Students are promoted to a subsequent semester of study if they have met the prerequisites.
2. Students retain credit for all modules passed.
3. Students may not register for module combinations that lead to timetable or examination clashes.
4. Students may not do Integrative Medical Laboratory Sciences III (Work Integrated Learning) until they have passed all first semester 3rd year modules.
5. Students are promoted to the second semester if they have passed at least 2 of the prescribed modules.
6. Students must pass at least 60% of the 1st year modules, including HAPDBY1 in order to qualify for readmission.

HS1.1.5 Curriculum

First year		
Module name	Module code	Prerequisite code
Semester one		
Statistical Methods 1A	SMT01A1	
Communication for Medical Laboratory Sciences 1A	CMLSBA1	
Introduction to Medical Laboratory Sciences 1A	IMLSBA1	
Computing Literacy	CSL01A1	
Chemistry 1A	CEMH1A1	
Semester two		
Cell Biology 1	CLBHBB1	
Physics 1B	PHYH1B1	

Introduction to Medical Laboratory Sciences 1B	IMLSBB1	
Immunology 1	IMMHBB1	
Year modules		
Human Anatomy, Physiology and Disease 1	HAPDBY1	
Second year		
Module name	Module code	Prerequisite code
Semester one		
Clinical Chemistry 2A	CLCHBA2	CLBHBB1 HAPDBY1
Haematology 2A	HAEHBA2	HAPDBY1
Histopathology 2	HTPHBA2	HAPDBY1
Medical Microbiology 2A	MDMHBA2	HAPDBY1
Immunohaematology 2	IMHHBA2	IMMHBB1 HAPDBY1
Semester two		
Clinical Chemistry 2B	CLCHBB2	CLCHBA2
Cytogenetics 2	CTGHBB2	HAPDBY1
Cytopathology 2	CTPHBB2	HAPDBY1
Haematology 2B	HAEHBB2	HAEHBA2

Pharmacology 4	PHMHBY4	CLCHBA3 IMLHBB3

HS1.2 MASTER OF HEALTH SCIENCES: BIOMEDICAL SCIENCES (M9BS1Q)

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF level 9, 180 Credits

Research dissertation 100%

HS1.2.1 Purpose

The purpose of the MHS in Biomedical Sciences is to produce graduates that are competent in conducting scientific research under minimal guidance in a chosen field, and to contribute to knowledge production in that field. The research problem, its justification, process, and outcome are to be reported in a dissertation which complies with the generally accepted norms for research at these levels.

HS1.2.2 Outcomes

Research is carried out under minimal guidance and a dissertation is successfully submitted.

HS1.2.3 Rules of access and admission requirements

A Bachelor of Health Science (BHS): Medical Laboratory Science (MLS) degree (NQF 8) or an equivalent qualification at an equivalent standard as determined by a Status Committee and approved by the Faculty Board.

Selection Criteria

Selection is based on approval by the Department's Research Committee.

HS1.2.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS1.2.5 Curriculum

A research project and a dissertation: The research component is 100%.

Module name	Module code
Semester one	
Research Project and Dissertation: Health Sciences (Biomedical Sciences)	DBS9XA1
Semester two	
Research Project and Dissertation: Health Sciences (Biomedical Sciences)	DBS9XB1

HS 1.3 PhD HEALTH SCIENCES: BIOMEDICAL SCIENCES(P9HS1Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS 1.3.1 Purpose

The purpose of the PhD in Health Sciences: Biomedical Sciences is to produce graduates that are competent in conducting scientific research under minimal guidance in a chosen field, and to contribute to knowledge production in that field. The research problem, its justification, process, and outcome are to be reported in a dissertation that complies with the generally accepted norms for research at these levels.

HS 1.3.2 Outcomes

Research is carried out under minimal guidance and a thesis is successfully submitted.

HS 1.3.3 Rules of access and admission requirements

A Master's degree: Biomedical Technology/Sciences (NQF 9) or an equivalent qualification at an equivalent standard as determined by a Status Committee and approved by the Faculty Board.

Selection Criteria

Selection is based on approval by the Faculty's Research Committee.

HS 1.3.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

- To publish a minimum of 2 papers before graduation

HS 1.3.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Biomedical Sciences)	RBM10X1
Semester two	
Research Project and Thesis: Health Sciences (Biomedical Sciences)	RBM10X2

HS2.0 DEPARTMENT OF CHIROPRACTIC

HS2.1 BACHELOR OF HEALTH SCIENCES IN CHIROPRACTIC (B9C01Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

Students start with a four-year degree. After the successful completion of the Professional Master's degree, you will be entitled to register with the Allied Health Professions Council of South Africa.

HS2.1.1 Purpose

The purpose of this curriculum is to give the student a thorough understanding and working knowledge of the structure and function of the human body in both health and disease and the fluctuations that lie between these poles.

Chiropractic programme aims to develop the emerging Chiropractor in light of the following:

- Primary contact practitioners.
- Specialist assessors of neuromusculoskeletal system.
- Specialists in the field of spinal and extremity manipulation.

HS2.1.2 Outcomes

On completion of this programme, the student will be able to:

ELO 1 Apply the relevant procedures and technologies in order to clinically assess, diagnose, treat and manage (including appropriate referral) of the patient in terms of normal and abnormal findings.

ELO 2 Apply the principles, proven techniques and specialized skills required for the promotion of musculoskeletal health and the prevention and rehabilitation of problems of the musculoskeletal system.

ELO 3 Demonstrate the application of pertinent knowledge of the biopsychosocial, biological, pharmacological and basic sciences in terms of chiropractic and community health.

ELO 4 Demonstrate appropriate communication skills for personal and professional development within a chiropractic context and apply the principles of medical ethics within a multi-cultural and international context.

ELO 5 Acquire knowledge of the entrepreneurial sciences and professional practices relevant to chiropractic.

ELO 6 Evaluate and interrogate multiple sources of literature as critical users and developers of research in the Chiropractic field, continue with lifelong learning and become a reflective practitioner.

HS2.1.3 Rules of access and admission requirements

The admission requirements for the BHS Chiropractic programme are as tabulated below:

A Senior Certificate with matriculation exemption, or an equivalent qualification at an equivalent standard as determined by a Status Committee, with the following:

Two of the following modules:

1. Mathematics with at least a Higher Grade D or Standard Grade C symbol.
2. Physical Science with at least Higher Grade D or Standard Grade C symbol.
3. Biology with at least Higher Grade D or Standard Grade C symbol.

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
26	5	4	Not accepted	4	4

Selection criteria

Selection is based on:

1. Applicants with Physical Sciences or Life Sciences will be considered, based on academic merit.
2. Complete an online questionnaire.
3. Letters of recommendation/observation from at least 2 practicing Doctors of Chiropractic.
4. A personal interview, if points 3 and 4 are successfully completed.

HS2.1.4 Pass requirements

1. Students are promoted:
 - a. To full second-year status if they have passed all the first-year modules.
 - b. To full third-year status if they have passed all the second-year modules.
 - c. To full fourth-year status if they have passed all third-year modules.
2. The pass mark for all clinical/practical modules is 60% from the third year of study.
3. In order to gain readmission to the programme, first year students must pass a

minimum of 60% of the first-year modules.

4. Students may enrol for a module in the following year, provided that:
 - a. They have passed the prerequisite module.
 - b. They have passed both the theory and practical final summative assessments in a module comprising a theory and a practical component.
5. Students retain credit for all modules passed.
6. Students must pass all components of the module(s) to obtain credit for the module(s).
7. Students may not register for module combinations that lead to timetable clashes.
8. 100% attendance of and participation in the practical and/or clinical components are compulsory. If students fail to comply with this requirement, they may fail the module and be required to repeat the full module.
9. If students fail any third or fourth year module(s), they must repeat all the practical/clinical modules of the respective year. The practical and theoretical components are assessed in an integrated manner and students will therefore be required to repeat and pass the module(s) in entirety, as indicated in the relevant learning guide. If students fail to comply with this requirement, they may not be promoted to the following year of study.
10. Students will be required to complete a stipulated clinical component (in line with any relevant Professional Board requirements) prior to conferment of degree.

HS2.1.5 Student registration with the Professional Council

Students must register with the Allied Health Professions Council of South Africa at the beginning of each year of registration, at which time a fee is payable. It is the students' responsibility to ensure they are registered from the second year of study. During the fourth year of study, students must successfully complete a First Aid course for which the Department will make provision. An additional levy will be charged. Students will subsequently be personally responsible for maintaining the validity of this course.

HS2.1.6 Curriculum

All modules are Continuous Evaluation modules.

First year		
Module name	Module code	Prerequisite code
Semester one		
Physics of Health Sciences 1	PHYCHA1	
Semester Two		
Sociology of Health and Health Care	SOHCHB1	
Year modules		
Anatomy and Physiology 1	ANPCHY1

HS2.2 MASTER OF HEALTH SCIENCES IN CHIROPRACTIC (M9C01Q)

Duration of programme

Full-time: 2 Years

NQF Level 9, 180 Credits

Course work 70% and minor dissertation 30%

After the successful completion of the Professional Master of Health Sciences in Chiropractic degree you will be entitled to register with the Allied Health Professions Council of South Africa.

HS2.2.1 Purpose

The purpose of this curriculum is to give the student a thorough understanding and working knowledge of the structure and function of the human body in both health and disease and the fluctuations that lie between these poles.

The Chiropractic programme aims to develop the emerging Chiropractor as a:

- Primary contact practitioner.
- Specialist assessor of neuromusculoskeletal system.
- Specialist in the field of spinal and extremity manipulation.

HS2.2.2 Outcomes

On completion of this programme, the student will be able to:

ELO 1 Apply the relevant procedures and technologies in order to clinically assess, diagnose, treat and manage (including appropriate referral) of the patient in terms of normal and abnormal findings.

ELO 2 Apply the principles, proven techniques and specialized skills required for the promotion of musculoskeletal health and the prevention and rehabilitation of problems of the musculoskeletal system.

ELO 3 Demonstrate the application of pertinent knowledge of the biopsychosocial, biological, pharmacological and basic sciences in terms of chiropractic and community health.

ELO 4 Demonstrate appropriate communication skills for personal and professional development within a chiropractic context and apply the principles of medical ethics within a multi-cultural and international context.

ELO 5 Acquire knowledge of the entrepreneurial sciences and professional practices relevant to chiropractic.

ELO 6 Critically use and interrogate multiple sources of literature in order to develop and contribute towards research output in a Chiropractic related field and to continue with lifelong learning and become a reflective practitioner.

HS2.2.3 Rules of access and admission requirements

The minimum admission requirement is a Bachelor of Health Sciences in Chiropractic (BHSc Chiropractic). Applications from persons with an equivalent qualification will be considered by a constituted status committee in line with the University's & Faculty's regulations.

Selection criteria

None

HS2.2.4 Pass requirements

1. Students must pass all components of the module(s) to obtain credit for the module(s).
2. Students may not register for module combinations that lead to timetable clashes.
3. 100% attendance of and participation in the practical and/or clinical components are compulsory. If students fail to comply with this requirement, they may fail the module and be required to repeat the full module.
4. If students fail a module(s), they must repeat all the practical/clinical modules of the respective year. The practical and theoretical components are assessed in an integrated manner and students will therefore be required to repeat and pass the module(s) in entirety, as indicated in the relevant learning guide. If students fail to comply with this requirement, they may not graduate.
5. Students will be required to complete a stipulated clinical component (in line with any relevant Professional Board requirements) prior to conferment of degree.

HS2.2.5 Student registration with the Professional Council

1. Students must register with the Allied Health Professions Council of South Africa at the beginning of each year of registration, at which time a fee is payable. It is the students' responsibility to ensure they are registered.
2. After graduation, students must apply to the Council for registration as a Chiropractor.
3. Full registration will only be granted after completion of a period of Community Service / Internship as determined by the Allied Health Professions Council of South Africa.

HS2.2.6 Curriculum

A research project and a minor dissertation. The research component is 30%.

First year		
Module name	Module code	Prerequisite code
Semester one		
Clinical and Applied Biomechanics 5	CAB9XA1	
Practice Management and Jurisprudence	PMJ9X01	
Year modules		
Clinical Chiropractic 5	CHC9XY1	
Chiropractic Clinical Practice 5A	CHP9XA1	
Chiropractic Principles and Practice 5	CPP9XY1	
Myofascial and Auxiliary Therapies 5	MAT9XA1	
Research Project and Dissertation 5A	RPD9XA1	

Second year		
Module name	Module code	Prerequisite code
Semester one		
Research Project and Dissertation 5B	RPD9XB2	
Semester two		
Research Project and Dissertation 5C	RPD9XC2	
Year modules		
Chiropractic Clinical Practice 5B	CHP9XB2	

HS2.3 PhD HEALTH SCIENCES: CHIROPRACTIC (P9HS2Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS2.3.1 Purpose

The purpose of this programme is to provide the qualifying student with advanced analytical problem-solving and reflective competencies in the field of chiropractic, and to enable them to act as a leader within the chiropractic research field. This will be achieved by making an original contribution to the knowledge content of chiropractic through independent research.

HS2.3.2 Outcomes

On completion of this qualification the graduate will be competent to conduct, present/publish and supervise accredited research within the field of chiropractic, in order to advance professional development and provide health education to individuals and communities.

HS2.3.3 Rules of access and admission requirements

The minimum admission requirement is one of the following:

- Master of Health Sciences in Chiropractic
- Master of Technology: Chiropractic
- An Equivalent qualification in a relevant field at an NQF level 9. Applications from persons with an equivalent qualification will be considered by a constituted status committee in line with the University's & Faculty's regulations.

Selection criteria

Selection is based on approval of the student's research proposal by the Department's Research Committee and then the Faculty's Research and Ethics Committees.

HS2.3.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg

HS2.3.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Chiropractic)	RPC10X1
Semester two	
Research Project and Thesis: Health Sciences (Chiropractic)	RPC10X2

HS3.0 DEPARTMENT OF COMPLEMENTARY MEDICINE

HS3.1 BACHELOR OF HEALTH SCIENCES IN COMPLEMENTARY MEDICINE (B9CM1Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS3.1.1 Purpose

The purpose of this qualification is to provide the qualifying student with the necessary knowledge, skills and competencies required to successfully consult, treat pre-diagnosed patients and communicate holistic advice to patients. The graduate will be a team player capable of working in multidisciplinary teams to promote the profession.

HS3.1.2 Outcomes

On completion of this programme the graduate will be competent to practice as a Complementary Medicine (CM) healthcare therapist within the community. The graduate will be eligible to register with the Allied Health Professions Council of South Africa as an acupuncture therapist. The graduate will be able to conduct research within the field of CM in order to advance professional development and provide health education to individuals and communities.

HS3.1.3 Rules of access and admission requirements

A Senior Certificate with matriculation exemption, or an equivalent qualification at an equivalent standard as determined by a Status Committee, with the following:

Two of the following subjects:

1. Mathematics with at least a Higher Grade D or Standard Grade C symbol.
2. Physical Science with at least Higher Grade D or Standard Grade C symbol.
3. Biology with at least Higher Grade D or Standard Grade C symbol.

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
26	5	4	Not accepted	4	4

Selection criteria

Selection is based on:

1. Applicants with either Life Sciences or Physical Sciences will be considered based academic merit.
2. Letters of recommendation from at least 2 practitioners of CM, or;
3. Letter of recommendation from 2 practitioners from the Health Training Centre, UJ.
4. Completion of an assignment.

HS3.1.4 Pass requirements

1. Students are promoted:
 - a. To full second-year status if they have passed all the first-year modules.
 - b. To full third-year status if they have passed all the second-year modules.
 - c. To full fourth-year status if they have passed all the third-year modules.
2. The pass mark for all clinical/practical modules is 60% from the third year of study.
3. In order to gain readmission to the programme, first year students must pass a minimum of 60% of the first-year modules.
4. Students may enrol for a module in the following year, provided that:
 - a. They have passed the prerequisite module.
 - b. They have passed both the theory and practical final summative assessments in a module comprising a theory and a practical component.
5. Students retain credit for all modules passed.
6. Students must pass all components of the module(s) to obtain credit for the module(s).
7. Students may not register for module combinations that lead to timetable clashes.
8. 100% attendance of and participation in the practical and/or clinical components are compulsory. If students fail to comply with this requirement, they may fail the module and be required to repeat the full module.
9. If students fail any third or fourth year module(s), they must repeat all the practical/clinical modules of the respective year. The practical and theoretical components are assessed in an integrated manner and students will therefore be required to repeat and pass the module(s) in entirety, as indicated in the relevant learning guide. If students fail to comply with this requirement, they may not be promoted to the following year of study.
10. Students will be required to complete a stipulated clinical component (in line with any relevant Professional Board requirements) prior to conferment of degree.

HS3.1.5 Student Registration with Professional Council

1. Students must register with the Allied Health Professions Council of South Africa (AHPCSA) at the beginning of each year of registration, at which time a fee is payable to the AHPCSA. It is the students' responsibility to ensure they are registered from the second year of study.
2. After graduation, students may apply to the AHPCSA for registration as an Acupuncturist. Full registration will only be granted after completion of a period of Community Service/ Internship as determined by the Allied Health Professions Council of South Africa.

HS3.1.6 Curriculum

All modules are Continuous Evaluation modules.

HS3.2 [POSTGRADUATE DIPLOMA IN ACUPUNCTURE \(E9A01Q\)](#)

Duration of programme

Part-time: Minimum 2 years

NQF Level 8, 120 Credits

HS3.2.1 **Purpose**

The purpose of the Postgraduate Diploma in Acupuncture is to provide existing health care professionals with knowledge of the principles, practice and safety issues of the use of acupuncture techniques. The qualifying graduate will be able to competently apply and integrate clinical approaches that optimise the use of the various employed techniques in acupuncture therapeutics; incorporate acupuncture as a treatment modality in their practice as clinically indicated; and be able to integrate modern medical science and acupuncture diagnostics and therapeutics to improve patient care and satisfaction. The graduate will also be a team player capable of working in multidisciplinary teams to promote the profession.

HS3.2.2 **Outcomes**

Students will be able to:

Interpret clinical data in order to identify and assess the range of health problems presented to acupuncturists, and implement a comprehensive and holistic approach with the integration of relevant clinical competencies and therapeutic acupuncture knowledge.

HS3.2.3 **Rules of access and admission requirements**

Master of Technology (M. Tech): Homoeopathy, M. Tech Chiropractic, Bachelor of Medicine or Bachelor of surgery (MBChB), Double Bachelors from the University of the Western Cape (UWC) (BSc Complementary Health Science plus a Bachelor's degree in one of the following: Phytotherapy, Naturopathy, or Unani-Tibb).

Applications from persons with other related qualifications will be considered by a constituted status committee in line with the University and Faculty regulations.

HS3.2.4 **Pass requirements**

1. The pass mark for all clinical/practical modules is 60%.
2. The pass mark for all theory modules is 50%.
3. Students must pass all components of the module(s) to obtain credit for the module(s).
4. Students may be required to complete a stipulated clinical component (in line with any relevant Professional Board requirements) prior to conferment of degree.

HS3.2.5 Student Registration with Professional Council

Students must register with the Allied Health Professions Council of South Africa (AHPCSA) at the beginning of each year of registration, as a student within the domain of acupuncture, at which time a fee is payable to the AHPCSA. It is the students' responsibility to ensure they are registered from the second year of study.

After graduation, students can apply to the AHPCSA for registration as an Acupuncturist. Full registration will only be granted after completion of a period of Community Service/ Internship as determined by the Allied Health Professions Council of South Africa.

HS3.2.6 Curriculum

Clinical Acupuncture 2	CLACMY2	CLACMY1
Ethics and Jurisprudence	ETJCMY2	NETCMY1

HS3.3 [POSTGRADUATE DIPLOMA IN PHYTOTHERAPY \(E9P01Q\)](#)

Duration of programme

Part-time: Minimum 2 years

NQF Level 8, 120 Credits

HS3.3.1 Purpose

The purpose of this programme is to develop a graduate competent in the knowledge, attitudes, insight and skills required for diagnosing and managing patients in the field of Phytotherapy and formulating comprehensive treatment plans for health promotion. Graduates will be competent to compound, dispense and prescribe herbal medicines within their scope of practice and will also be a team player capable of working in multidisciplinary teams to promote the profession.

HS3.3.2 Outcomes

Derive, analyse, and interpret clinical data in order to identify and assess the range of health problems presented to phytotherapists, and implement a comprehensive

and holistic approach with the integration of relevant clinical competencies and phytotherapy knowledge.

HS3.3.3 Rules of access and admission requirements

Master of Technology (M. Tech): Homoeopathy, M. Tech Chiropractic, Bachelor of Medicine or Bachelor of surgery (MBChB), Double Bachelors from the University of the Western Cape (UWC) (BSc Complementary Health Science plus a Bachelor's degree in one of the following: Chinese Medicine and Acupuncture, Naturopathy, or Unani-Tibb).

Applications from persons with other related qualifications will be considered by a constituted status committee in line with the University and Faculty regulations.

HS3.3.4 Pass requirements

1. The pass mark for all clinical/practical modules is 60%.
2. The pass mark for all theory modules is 50%.
3. Students must pass all components of the module(s) to obtain credit for the module(s).
4. Students may be required to complete a stipulated clinical component (in line with any relevant Professional Board requirements) prior to conferment of degree.

HS3.3.5 Student Registration with Professional Council

Students must register with the Allied Health Professions Council of South Africa (AHPCSA) at the beginning of each year of registration, as a student within the domain of phytotherapy, at which time a fee is payable to the AHPCSA. It is the students' responsibility to ensure they are registered from the second year of study.

After graduation, students can apply to the AHPCSA for registration as a Phytotherapist. Full registration will only be granted after completion of a period of Community Service/ Internship as determined by the Allied Health Professions Council of South Africa.

Ethics and Jurisprudence	ETJCMY2	HPPCMY1

HS3.4 MASTER OF HEALTH SCIENCES IN COMPLEMENTARY MEDICINE (M9CM1Q)

Duration of programme

Full-time: 2 Years

NQF Level 9, 180 Credits

Course work 70% and minor dissertation 30%

HS3.4.1 Purpose

The purpose of this qualification is to develop a graduate competent in the knowledge, attitudes, insight and skills required for diagnosing and treating patients in the field of CM as well as formulating comprehensive management plans for health promotion.

The qualifying graduate will be able to competently apply and integrate theoretical principles, evidence-based techniques, practical exposure and appropriate skills as a healthcare practitioner. The programme of study will produce a well-rounded graduate who will be competent to compound, dispense and prescribe CMs within that scope of practice. The graduate will be a team player capable of working in multidisciplinary teams to promote the profession.

HS3.4.2 Outcomes

On completion of this programme the graduate will be competent to practice as a CM healthcare practitioner, as either a homeopath or phytotherapist, within the community. The graduate will be eligible to register with the Allied Health Professions Council of South Africa as a practitioner within the respective CM field. The graduate will be able to conduct research in order to develop and contribute towards research output in a CM related field in order to advance professional development in the provision of health care and education to individuals and communities.

HS3.4.3 Rules of access and admission requirements

The minimum admission requirement is the Bachelor of Health Sciences in Complementary Medicine (BHS CM). Applications from persons with an equivalent qualification will be considered by a constituted status committee in line with the University's & Faculty's regulations.

HS3.4.4 Pass requirements

1. The pass mark for all clinical/practical modules is 60%.
2. Students retain credit for all modules passed.
3. Students must pass all components of the module(s) to obtain credit for the module(s).
4. 100% attendance of and participation in the practical and/or clinical components are compulsory. If students fail to comply with this requirement, they may fail the module and be required to repeat the full module.
5. Students will be required to complete a stipulated clinical component (in line with any relevant Professional Board requirements) prior to conferment of degree.
6. If students fail any module(s), they must repeat all the practical/clinical modules (excluding the entrance OSCE). The practical and theoretical components are

assessed in an integrated manner and students will therefore be required to repeat and pass the module(s) in entirety, as indicated in the relevant learning guide.

7. All students are required to complete a research project for conferment of the qualification which will be weighted as 30% of the master's year.

HS3.4.5 Student Registration with Professional Council

1. Students must register with the Allied Health Professions Council of South Africa (AHPCSA) at the beginning of the year, at which time a fee is payable to the AHPCSA. It is the students' responsibility to ensure they are registered.
2. After graduation, students must apply to the Council for registration within the respective field of CM.
3. Registration as a practitioner may only be granted by the AHPCSA after completion of a prescribed internship as determined by the AHPCSA.

HS3.4.6 Curriculum

A research project and a minor dissertation. The research component is 30%.

First year		
Module name	Module code	Prerequisite code

HS3.5 DOCTOR OF HEALTH SCIENCES IN COMPLEMENTARY MEDICINE (P9CM1Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF Level 10, 360 Credits

Research thesis 100%

HS3.5.1 Purpose

The purpose of this programme is to provide the qualifying student with advanced analytical problem-solving and reflective competencies in the field of complementary medicine (CM), and to enable them to act as a leader within the CM research field. This will be achieved by making an original contribution to the knowledge content of CM through independent research.

HS3.5.2 Outcomes

On completion of this qualification, the graduate will be competent to conduct, present/publish and supervise accredited research within the field of CM, in order to advance professional development and provide health education to individuals and communities.

HS3.5.3 Rules of access and admission requirements

The admission requirement for the DHSc CM programme is a Masters of Health Sciences in Complementary Medicine (MHSc CM) (Homeopathy or Phytotherapy) or Master of Technology (M. Tech): Homoeopathy, or an equivalent qualification in a relevant field at an NQF level 9, generating a minimum of 180 credits for example: phytochemistry, pharmacology or related analytical fields. Applications from persons with an equivalent qualification will be considered by a constituted status committee in line with the University's & Faculty's regulations.

Selection criteria

Selection is based on approval of the student's research proposal by the Department and Faculty's Research and Ethics Committees.

HS3.5.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS3.5.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Complementary Medicine	CPMEDA1
Semester two	
Research Project and Thesis: Complementary Medicine	CPMEDB1

HS4.0 DEPARTMENT OF EMERGENCY MEDICAL CARE

HS4.1 HIGHER CERTIFICATE IN EMERGENCY MEDICAL CARE (F9E01Q)

Mode of Offering: Contact

Duration of programme

Offered Off campus: Minimum 1 year and Maximum 2 years

NQF Level 5, 132 Credits

HS4.1.1 Purpose

This programme is designed to produce entry-level emergency care providers who are clinical assistants within the emergency medical care environment thereby replacing the Basic Ambulance Assistant Course as the entry qualification for emergency medical services. The qualification provides an entry point into a career in emergency medical services thereby creating access and an opportunity for employment within the emergency services and related industries. The programme will develop the necessary foundational knowledge; skills and attitudes necessary to form the basis for further study in the field of prehospital emergency medical care and will provide access to further study within the HEQSF.

Graduates will practice primarily on ambulances within South Africa in rural and urban contexts that range from sophisticated emergency medical care facilities to remote primary health care settings. This programme also aims to promote an understanding of the multi-disciplinary approach to effective, efficient patient care.

HS4.1.2 Outcomes

1. Demonstrate effective communication and apply the principles of medical ethics, professional behaviour and the legal framework to the context within which Emergency Care Assistants operate while maintaining personal health, wellness and safety.
2. Demonstrate knowledge of the structure and function of Emergency Medical Service (EMS) systems in South Africa and how they relate to the broader health care structures within the country.
3. Provide healthcare as part of a team within an emergency care environment to all sectors of the community within the Emergency Care Assistant scope of practice.

HS4.1.3 Rules of access and admission requirements

The minimum entry requirement is the National Senior Certificate with appropriate module combinations and levels of achievement as defined in the Minister's policy,

In addition to adherence to the University's student admission policy the Department has the following requirements:

The applicant with a Senior Certificate (Prior to 2009) must have at least a minimum of an E symbol on Higher Grade or a D symbol on Standard Grade pass for all of the following subjects:

- English
- Mathematics
- Biology or Physical Sciences

For applicants who obtained a Grade 12 during or after 2009:

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
21	5	3	Not accepted	3	4

Selection criteria

Selection will be based on:

- academic merit; APS
- a structured personal interview;
- a phobia evaluation;
- medical examination;
- physical fitness and swimming proficiency evaluation;
- an English proficiency evaluation;
- previous appropriate experience (a recommendation).

HS4.1.4 Pass requirements

1. Students may graduate once they have passed all of the modules.
2. Due to the integrated nature of certain modules, individual credits are NOT retained unless all modules are passed within the same academic year. This ruling applies to the following modules:

HCert EMC
EMCCTY1
EMCCPY1
CLPECY1

3. If students fail any of the modules within the programme, they need to register for, and pass the physical preparedness module again.
4. 100% attendance of all theory lectures, practicals, experiential or clinical components as well as tutorials is compulsory.
5. In order to gain readmission to the programme, students must pass a minimum of 60% of the modules.

- Students may not register for the same module for a third time without permission from the Head of Department and Executive Dean.
- Students have a maximum of two years to complete the full-time offering, and three years to complete the part-time offering.

HS4.1.5 Practical Training (Clinical learning)

- Students must, by the end of the relevant year of study, complete the Clinical Learning requirements which are detailed in the relevant study guides in order to be granted a credit for the clinical practice module.
- Clinical practice is rostered at set periods during the academic year in conjunction with cooperative partners and cannot be personalised.
- 100% attendance of all rostered shifts is compulsory. Students who miss shifts due to illness or injury will be required make up the missed shifts prior to the end of the academic year if they are to be granted a credit for the practical training modules.

HS4.1.6 Specific rules and regulations for Emergency Medical Care students

- Students must familiarize themselves with the internal rules and regulations of the Department of Emergency Medical Care. These rules and regulations, as set out in the Departmental policy document, are binding.
- Students who fail to attend theory classes will be requested to provide in writing reasons for their non-attendance.
- The programme is not offered as a distance- learning programme. Students who elect to leave the country will be unable to continue with their studies.
- All students (even if not registered for Clinical Practice within that academic year) are required to see a minimum number of patients each year as determined by the department whilst they are registered. This is a requirement to ensure that clinical competencies are retained.
- All registered students are required to attend physical training sessions as rostered.
- Students may not register for a third time for the same module unless allowed by the Head of Department and Executive Dean of the Faculty.
- Students are required to adhere to the requirements of the department relating to uniform and personal appearance.

HS4.1.7 Curriculum

All modules are Continuous Evaluation modules

First year		
Module name	Module code	Prerequisite code
Semester one		
Basic Sciences: Physics 1A	PHYCEA1	
Foundations of Professional Practice	FOPPCA1	
End User Computing	ENUC011	
Semester two		
Basic Sciences: Chemistry	CHBCEB1	
Mental Health and Wellness	MHAECB1	

Year modules		
Emergency Medical Care 1 Theory	EMCCTY1	
Emergency Medical Care 1 Practical	EMCCPY1	
Clinical Practice 1	CLPECY1	
Anatomy 1	ANATCY1	
Physiology 1	PHYSEY1	
Physical Preparedness 1	PHPRCY1	

HS4.2 [DIPLOMA IN EMERGENCY MEDICAL CARE \(D9E01Q\)](#)

Duration of programme

Full-time: Minimum 2 years

NQF Level 6, 240 Credits

HS4.2.1 Purpose

This is a mid-level worker qualification within the Emergency Care profession. Successful completion leads to registration with the Health Professions Council of South Africa (HPCSA) as a Paramedic. The programme recognizes the key competences required by Paramedics who are able to work independently in a variety of prehospital emergency care contexts.

HS4.2.2 Outcomes

1. Demonstrate effective communication and apply the principles of medical ethics, professional behaviour, and the legal framework to the context within which Paramedics operate while maintaining personal health, wellness and safety.
2. Demonstrate knowledge of the structure and function of Emergency Medical Service (EMS) systems in South Africa and how they relate to the broader health care structures within the country.
3. Care for and operate medical and rescue equipment and resources required to render emergency care and rescue within the Paramedic scope of practice.
4. Perform appropriate clinical assessment, diagnostics skills and interventions within the Paramedic scope of practice.

HS4.2.3 Rules of access and admission requirements

The minimum entry requirement is the National Senior Certificate with appropriate module combinations and levels of achievement as defined in the Minister's policy. Minimum Admission Requirements for Higher Certificate, Diploma and Bachelor's Degree Programmes Requiring a National Senior Certificate, Government Gazette, Vol. 482, 27961, 18 August 2005.

In addition to adherence to the University's student admission policy, the Department has the following requirements:

1. The minimum admission requirement is a Senior Certificate with university exemption, or an equivalent (NQF Level 4) achievement, as determined by a status committee, with the following subject combinations and symbols:
 - 1.1 Biology or Physiology with at least a Higher Grade D or Standard Grade C symbol.
 - 1.2 Physical Science with at least a Higher Grade D or Standard Grade C symbol.

1.3 Mathematics with at least a Higher Grade D or Standard Grade C symbol.

For applicants who obtained a Grade 12 during or after 2008:

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
26	5	4	Not accepted	4	4

Selection criteria

Selection will be based on:

- academic merit; APS
- a structured personal interview;
- a phobia evaluation;
- medical examination;
- physical fitness and swimming proficiency evaluation;
- an English proficiency evaluation;
- previous appropriate experience (a recommendation).

HS4.2.4 Pass requirements

1. Students may graduate once they have passed all the modules.
2. Due to the integrated nature of certain modules, individual credits are NOT retained unless all are passed within the same academic year. This ruling applies to the following modules:

1 st Year	2 nd Year
EMCTH11	EMCTH22
EMCPR11	EMCPR22
CLPR011	CLPR022

3. Students may enrol for a module in the following year, provided that:
 - 3.1 They have passed the prerequisite modules.
 - 3.2 The module selection does not lead to timetable clashes.
 - 3.3 In the case of Medical Rescue, the student has passed the physical preparedness module in the previous year of study.
4. If any of the modules within a particular year is failed, students need to register for and pass the physical preparedness module again.
5. First-year students must pass a minimum of 60% of the first-year modules to qualify for readmission to the programme.
6. 100% attendance of all theory lecturers, practical, experiential or clinical components as well as tutorials is compulsory.
7. Students are granted full second-year status if they have passed all of the first-year modules.
8. Physical training is compulsory and in order to gain entry into medical rescue modules, students must successfully complete the physical preparedness evaluations.
9. Students may not register for the same module for a third time without permission from the Head of Department and Executive Dean of the Faculty.
10. Students have a maximum of four years to complete the qualification.

HS4.2.5 Practical Training (Clinical learning)

1. Students must, by the end of each year, complete the Clinical Learning requirements which are detailed in the relevant study guides in order to be granted a credit for the clinical practice modules.
2. Clinical practice is rostered at set periods during the academic year in conjunction with cooperative partners and cannot be personalised.
3. 100% attendance of all rostered shifts is compulsory. Students who miss shifts due to illness or injury will be required make up the missed shifts prior to the end of the academic year if they are to be granted a credit for the practical training modules.

HS4.2.6 Specific rules and regulations for Emergency Medical Care students

1. Students must familiarize themselves with the internal rules and regulations of the Department of Emergency Medical Care. These rules and regulations, as set out in the Departmental policy document, are binding.
2. 100% attendance of all theory lectures, practical, experiential, or clinical components as well as tutorials is compulsory.
3. Students who fail to attend theory classes will be requested to provide in writing reasons for their non-attendance.
4. The programme is not offered as a limited contact or distance- learning programme. Students who elect to leave the country will be unable to continue with their studies.
5. All students (even if not registered for Clinical Practice within that academic year) are required to see a minimum number of patients each year as determined by the department whilst they are registered. This is a requirement to ensure that clinical competencies are retained.
6. All registered students are required to attend physical training sessions as rostered.
7. Students may not register for a third time for the same module unless allowed by the Head of Department and Executive Dean of the Faculty.
8. Students are required to adhere to the requirements of the department relating to uniform and personal appearance.
9. Students have maximum of 4 years to complete the two-year diploma.

HS4.2.7 Curriculum

All modules are Continuous Evaluation modules.

First year

HS4.3 **ADVANCED CERTIFICATE IN MEDICAL RESCUE (C9AMRQ)**

Mode of Offering: Contact One Year Programme

Duration of programme

Offered Part-Time: Minimum 2 years and Maximum 3 years

NQF Level 6, 147 Credits

HS4.3.1 **Purpose**

This programme is designed to equip graduates with the required knowledge, skills and attributes to function as Medical Rescue Technicians. Medical Rescue Technicians will function within the emergency care profession of the South African healthcare system. These professionals will have the technical and cognitive ability necessary to operate at urban, rural and aquatic rescue incidents. Medical Rescue Technicians will promote a multi-disciplinary approach to effective, efficient rescue techniques with the patients' needs being central to the rescue operation.

HS4.3.2 Outcomes

1. Articulate a meaningful understanding of the over-arching principles and generic phases of a rescue including the role and function of rescue personnel, rescue services, incident command systems and applicable legislation within the South African context.
2. Apply the principles and theories of basic sciences underpinning rescue activities.
3. Conduct operational routines including the identification, inspection, preparation, operation, maintenance and storage of equipment, vehicles and other resources required to provide safe and effective rescue services.
4. Demonstrate appropriate levels of physical fitness, emotional stability, endurance, teamwork, and leadership required for the effective rendering of rescue in austere environments.
5. Demonstrate the ability to safely construct and operate rope rescue systems used to access, package, treat and extricate victims in a range of contexts including, urban, rural, industrial, wilderness and aquatic settings.
6. Perform and participate in search and rescue activities within a range of contexts including, urban, rural, industrial, wilderness and aquatic settings.

HS4.3.3 Rules of Access and Admission Requirements

This is a qualification for individuals who are already registered as health care professionals. Applicants will be required to provide proof that they are registered with the Health Professions Council (HPCSA) of South Africa or similar registering authority in the case of international applicants.

In addition, applicants would need to also hold an applicable recognised NQF level 5 or other higher education qualification in emergency medical care that facilitates their articulation and access into the Advanced Certificate in Medical Rescue. Applicants may enter the programme using the UJ's RPL criteria.

HS4.3.4 Selection criteria

To register for the qualification, the candidate must meet or exceed all the requirements indicated below:

The applicant with a Senior Certificate (prior to 2009) with University exemption, or its equivalent (NQF Level 4), as determined with an M-Score of 10 and at least a minimum of an E symbol on Higher Grade or a D symbol on Standard Grade pass for the following subjects:

- English
- Mathematics
- Biology/Physiology or,
- Physical Science

The applicant with a National Senior Certificate with a Diploma endorsement must have the following subjects and rating codes:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
21	4	4	Not accepted	4	4

In addition to the above applicants must undergo structured interview, a South African Civil Aviation Authority (SACAA) Class II Cabin Crew Medical Assessment (or equivalent), physical fitness assessment (including swimming proficiency), acrophobia and claustrophobia testing and an English language proficiency assessment prior to registration.

Recognition of Prior Learning (RPL) will be applied on an individual basis against the exit-level outcomes of the programme on a case-by-case basis and will be conducted in accordance with the UJ's RPL Policy and Professional Board requirements.

HS4.3.5 Pass requirements

1. Students must pass all components of the module(s) to obtain credit for the module(s).
2. Students may graduate once they have passed all of the modules.
3. The Physical Preparedness module will be considered a co-requisite for any registered student, regardless of having passed the module in the prior academic semester or year.
4. Students must pass a minimum of 50% of the modules to qualify for readmission to the programme.
5. Students may not register for the same module for a third time without permission from the Head of Department and Executive Dean of the Faculty.
6. A range of assessment strategies and weightings, as laid out in the relevant module's learning guide, explains the continuous assessment criteria specified for promotion to the next year of study.

HS4.3.6 Curriculum

All modules are Continuous Evaluation modules.

First year

HS4.4 BACHELOR OF HEALTH SCIENCES IN EMERGENCY MEDICAL CARE (B9E01Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS4.4.1 Purpose

The purpose of this qualification is to develop an Emergency Care Practitioner competent in the clinical knowledge and skills required for the emergency medical care and medical rescue profession.

The graduate will be able to competently apply an integration of theoretical principles, proven techniques, practical experience and appropriate clinical skills in order to:

- Provide an independent specialised emergency medical care and rescue service to all sectors of the community.
- Demonstrate skills in management and research working independently and in a supervisory capacity within emergency services and the healthcare team.
- Become a reflective practitioner and lifelong student within the emergency medical care profession.
- Successful completion of this qualification will entitle the student to register with the Health Professions Council of South Africa as an Emergency Care Practitioner.

HS4.4.2 Outcomes

1. Demonstrate effective communication and apply the principles of medical ethics, professional behaviour, and the legal framework to the context within which emergency care practitioners operate while maintaining physical fitness, personal health, wellness and safety.
2. Provide and facilitate emergency medical care to all sectors of the community utilising specialised clinical strategies and technologies.
3. Perform medical rescue in a wide range of contexts.
4. Provide in-service training in emergency medical care and rescue.
5. Demonstrate an understanding of the structure and functioning of Emergency Medical

- Service (EMS) systems in South Africa including the provision of operational and clinical supervision within an emergency medical and rescue service.
6. Develop research skills, participate and conduct research in emergency medical care and rescue.

HS4.4.3 Rules of access and admission requirements

For applicants who obtained a Grade 12 prior to 2008:

1. A Senior Certificate with university exemption or an equivalent qualification at an equivalent standard, as determined by a Status Committee, with 2 of the following modules:
 - 1.1 Biology or Physiology with at least a Higher Grade D or Standard Grade C symbol.
 - 1.2 Physical Science with at least a Higher Grade D or Standard Grade C symbol.
 - 1.3 Mathematics with at least a Higher Grade D or Standard Grade C symbol.

For applicants who obtained a Grade 12 during or after 2008:

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
26	5	4	Not accepted	4	4

Selection criteria

Selection will be based on:

- academic merit;
- a structured personal interview;
- a phobia evaluation;
- passing of a Class II Aviation or equivalent medical examination;
- a physical preparedness evaluation;

Evidence of community service and or previous appropriate experience is a recommendation.

HS4.4.4 Pass requirements

1. Due to the integrated nature of certain modules, individual credits are NOT retained unless all are passed within the same academic year. This ruling applies to the following modules:

1 st Year	2 nd Year	3 rd Year	4 th Year
EMC01Y1	EMC01Y2	EMC01Y3	EMC01Y4
EMC02Y1	EMC02Y2	EMC02Y3	EMC02Y4
EMC03Y1	EMC03Y2	EMC03Y3	EMC03Y4
PFP01Y1	PFP02Y2	PFP03Y3	PFP04Y4

- 2 Students may enrol for a module in the following year, provided that:
 - 2.1 They have passed the prerequisite modules.
 - 2.2 The module selection does not lead to timetable clashes.
 - 2.3 In the case of Medical Rescue, the student has passed the fitness and swimming proficiency assessment.
- 3 First-year students must pass a minimum of 60% of the first-year modules to qualify for readmission to the programme.
- 4 100% attendance of all theory lectures, practical, experiential or clinical components as well as tutorials is compulsory.
- 5 Students who fail to attend theory classes will be requested to provide in writing reasons for their non-attendance.

HS4.4.5 Clinical practice (Work integrated learning)

1. Students must, by the end of each year, complete the requirements which are detailed in the EMC 1, 2, 3 and 4 Study Guides.
2. Clinical Learning and rescue practical are integrated into the academic programme in conjunction with cooperative education and training partners, for this reason, shift rosters cannot be personalized.
3. Due to the nature of emergency medical care and rescue work students registering for this programme may be required to work after-hours, weekends and over religious holidays. We are regrettably unable to cater for individual requests not to work on certain days and times.

HS4.4.6 Specific rules and regulations for Emergency Medical Care students

1. Students must familiarize themselves with the internal rules and regulations of the Department of Emergency Medical Care. These rules and regulations, as set out in the Departmental policy document, are binding.
2. The programme is not offered as a limited contact or distance- learning programme. Students who elect to leave the country will be unable to continue with their studies.
3. All students (even if not registered for Clinical Practice within that academic year) are required to see a minimum number of patients each year as determined by the department whilst they are registered. This is a requirement to ensure that clinical competencies are retained.
4. All registered students are required to attend physical training sessions as rostered.
5. Students may not register for a third time for the same module.
6. Students are required to adhere to the requirements of the department relating to uniform and personal appearance.
7. Students have maximum of 6 years to complete the four-year degree.

HS4.4.7 Curriculum

All modules are Continuous Evaluation modules.

HS4.5 [**POSTGRADUATE DIPLOMA IN CLINICAL SIMULATION \(E9CSMO\)**](#)

Mode of offering: Distance (Online)

Duration of programme

Offered Part-time: Minimum 2 years and maximum 3 years

NQF Level 8, Credits 124

HS4.5.1 **Purpose**

The purpose of the PGDip Clinical Simulation is to develop health care educators who are skilled in the integration and application of clinical simulation theories and practises in their own teaching, learning, assessment, and research. This requires problem-solving skills and critical, reflective thinking, as well as the ability to report on clinical simulated teaching principles in ways appropriate to the relevant academic and disciplinary discourses. The graduate will be able to competently apply an integration of theoretical principles, proven techniques, practical experience, and appropriate skills into their own teaching practises.

HS4.5.2 **Outcomes**

1. Demonstrate a deep understanding of the development and application of simulation as a strategy for health care education.
2. Apply adult learning theories to the construction and application of simulation-based learning experiences.
3. Describe and critically appraise current simulation technologies and modalities with regard to their value and application.
4. Design and implement simulation-based learning experiences using appropriate teaching, learning and assessment strategies.
5. Describe the core principles associated with the management of simulation facilities and related resources.
6. Critically appraise research methodologies and approaches used in simulation contexts.

HS4.5.3 **Rules of access and admission requirements**

The minimum admission requirement is an appropriate Health Sciences related Bachelor's degree or Advanced Diploma or equivalent qualification (a minimum of an

NQF level 7). The candidate should have experience in health professions education, with a minimum of 2 years' experience in their relevant field. This includes clinical or profession specific experience. Additionally, the candidate also needs access to a simulation laboratory/clinic where they will have the opportunity to conduct and participate in simulated activities. This may include conducting and participating in formal and non-formal simulation activities. Applicants would need to have access to hardware required to successfully navigate the online nature of the programme. This includes a laptop, tablet or desktop computer with suitable word processing applications and an internet connection. The use of Recognition of Prior Learning for access onto the programme will be considered provided this is in-line with the overall enrolment plan, related UJ and Council on Higher Education policies and procedures. International applicants will be assisted with application for the programme once a South African Qualifications Authority (SAQA) equivalency for their existing qualifications, is established.

HS4.5.4 Selection criteria

Once the minimum admission requirements are in place, applicants will apply via the UJ website. Once applications have been received by the Department, selection will be based on the candidates' prior experience and qualification. Experience in health professions education would be advantageous. The selection will further be guided by the enrolment strategy of the Department and the Faculty.

HS4.5.5 Pass requirements

1. Students retain credits for all modules passed.
2. Students must pass all components of the module(s) to obtain credit for the module(s).
3. Students may graduate once they have passed all the modules.
4. Students must pass a minimum of 50% of the modules to qualify for readmission to the programme.
5. Students may not register for the same module for a third time without permission from the Head of Department and Executive Dean of the Faculty.
6. Students have a maximum of two years full-time and three years part-time to complete the qualification.
7. A range of assessment strategies and weightings, as laid out in the relevant module's learning guide, explains the continuous assessment criteria specified for promotion to the next year of study.

HS4.6 MASTER OF EMERGENCY MEDICAL CARE (M9E01Q)

Duration of programme

Part-time: Minimum 1 year and Maximum 3 years

NQF Level 9, 180 Credits

Research dissertation 100%

HS4.6.1 Purpose

The primary purpose of this qualification is to provide qualifying students with the ability to:

- Perform independent scientific research with an original component
- Contribute to knowledge of and insight into emergency medical care as well as the specific discipline of research
- Display skills in related research methodologies and in proper formulation through a master's dissertation
- Reflect upon decision-making, self-directedness and contributions to medical science.

HS4.6.2 Outcomes

The student will be able to:

- Identify, formulate, prepare and solve research problems.
- Execute the research project at the appropriate level.
- Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
- Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
- Report research findings at the appropriate level.
- Make conclusions, suggestions and recommendations based on the data collected that are reasonable and justifiable.

HS4.6.3 Rules of access and admission requirements

A 4-year Bachelor's Degree in Emergency Medical Care or an equivalent qualification at an equivalent standard as determined by a Status Committee and approved by the

Faculty Board. Applications from persons with a BTech degree in Emergency Medical Care or equivalent qualifications will be considered by a constituted status committee in line with the Universities and Faculties regulations.

Selection criteria

Selection will be based on:

- Consideration of a research concept note
- Structured personal interview

The selection and allocation of postgraduate students depends on the availability of supervisors.

HS4.6.4 Pass requirements

Students are assessed via submission of a dissertation in line with the Senate Higher Degrees Policy of the University.

HS4.6.5 Curriculum

A research project and a dissertation. The research component is 100%.

Module name	Module code
Semester one	
Research Dissertation: Emergency Medical Care	EMC9X01
Semester two	
Research Dissertation: Emergency Medical Care	EMC9X02

HS4.7 PhD HEALTH SCIENCES: EMERGENCY MEDICAL CARE(P9H16Q)
Duration of programme
Part-time: Minimum 2 years and Maximum 5 years
NQF level 10, 360 Credits
Research thesis 100%

HS4.7.1 Purpose

The purpose of the Doctor of Philosophy: Emergency Medical Care Degree is to promote the career advancement of graduates in the field of emergency medical care by enabling students to conduct independent, novel research in emergency medical care.

This Doctoral Degree aims to provide members of the profession an opportunity to conduct independent original research through scientific discourse and independent investigation contributing to the development of the field of emergency medical care. The outcome of this field-specific Doctoral Degree is a comprehensive and systematic grasp of an in-depth body of knowledge in the field of emergency medical care with the development of specialist expert knowledge, thereby contributing to evidence based professional practice.

HS4.7.2 Outcomes

Demonstrate a systematic understanding of the field of Emergency Medical Care and a mastery of the skills and methods of research associated with the field of Emergency Medical Care. Demonstrate the ability to conceive, design and implement research with scholarly integrity. Make a contribution through original research that extends the frontier of knowledge by developing a substantial body of work in an area of Emergency Medical Care, some of which merits national or international refereed publication.

HS4.7.3 Rules of access and admission requirements

Prior learning

It is assumed that the student has specialist knowledge in research methodology and:

- Is knowledgeable about ethical considerations in relation to research in Emergency Medical Care.
- Is competent in research proposal writing.
- Is competent in report writing and dissemination.
- Has expertise in the area to be investigated.

Access to the Qualification

An appropriate Master's Degree in the field of Emergency Medical Care and Rescue is required. Alternatively, conferment of status may be granted through an internal evaluation process in alignment with institutional policies.

Applications from persons with an M Tech degree in Emergency Medical Care or equivalent qualifications will be considered by a constituted status committee in line with the Universities and Faculties regulations.

Selection criteria

The selection of Doctoral students will be done in accordance with rules and regulations of the Higher Degrees Committee of the University of Johannesburg as stipulated for

inter-disciplinary programmes:

Selection will be based on;

- Consideration of a research concept note
- Structured personal interview

The selection and allocation of postgraduate students depends on the available.

HS4.7.4 Pass requirements

The final outcome of a thesis which is ratified in accordance with the post graduate policy approved by the Senate. The results are considered by the Faculty Higher Degrees Committee for approval, sent to Faculty Board for ratification and then to Senate Higher Degrees Committee for noting in accordance with the University's Higher Degrees and Postgraduate Studies Policy.

It is expected of the student, in collaboration with the supervisor, to submit a journal article for publication in accordance with UJ policy and procedures.

HS4.7.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Emergency Medical Care)	REM10X1
Semester two	
Research Project and Thesis: Health Sciences (Emergency Medical Care)	REM10X2

HS5.0 DEPARTMENT OF ENVIRONMENTAL HEALTH

HS5.1 BACHELOR OF ENVIRONMENTAL HEALTH (B9ENV1)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS5.1.1 Purpose

The purpose of the BEH programme is to produce graduates who have a systematic and coherent body of knowledge to apply principles and practices of Environmental Health; the ability to access and evaluate scientific information and have a high level of analytical, cognitive and generic skills; To provide graduates opportunities for continued personal intellectual growth, advancing with postgraduate study, contributing to the social upliftment of society constructively; To provide society with graduates who demonstrate initiative and responsibility; be involve in science and research development; to transform the leadership base in South Africa and conduct themselves in a professional and ethical manner both in the workplace and society as required by the HPCSA.

HS5.1.2 Outcomes

1. Integrate and apply foundational, scientific principles and knowledge to Environmental Health sciences. [Range of scientific principles and knowledge includes, but is not limited to Chemistry, Microbiology, Physics, Mathematics, Ecology/Geology, Anatomy and Physiology (human and animal), Sociology and Anthropology];
2. Manage Environmental Health programmes that are not limited to environmental health risks, health impact assessments but rather on the prevention, promotion within natural, socio-economic, built and working environments within the scope of the profession. [Range: manage refers to: design, develop, implement and evaluate];
3. Demonstrate project management skills within a project management life-cycle;
4. Conduct and participate in Environmental Health research.
5. Demonstrate interpersonal relations and professional behavior in terms of the ethical code.

HS5.1.3 Rules of access and admission requirements

1. The admission requirements for this programme will adhere to the University of Johannesburg's Policy for Admission and Selection, which is current at the time of the inception of this programme.
2. A Senior Certificate or an equivalent qualification at an equivalent standard as determined by a Faculty Status Committee, with the following Subjects:

Mathematics at NQF Level 4: NSC achievement rating of (50-59%)

Life Sciences at NQF Level 4: NSC achievement rating of (50-59%)

Physical Science at NQF Level 4: NSC achievement rating of (50-59%).

Any other two (2) subjects at level 4.

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
24	4	4	Not accepted	4	4

HS5.1.4 Curriculum

HS5.2 MASTER OF HEALTH SCIENCES: ENVIRONMENTAL HEALTH (M9EH1Q)**Duration of programme****Full-time: Minimum 1 year and Maximum 2 years****Part-time: Minimum 1 year and Maximum 3 years****NQF level 9****Research dissertation 100%****HS5.2.1 Purpose**

To provide students with the knowledge and skills to conduct independent research through advanced scientific problem solving skills, and the application of critical and reflective thinking in the field of Environmental Health. The qualification is intended for persons who will contribute to knowledge generation through independent research to develop and advance the profession of Environmental Health.

HS5.2.2 Outcomes

On completion of these programme the student will be able to apply scientific research, problem-solving, analytical, critical thinking and reflective skills to perform research and compile a research dissertation in a chosen field of specialisation within Environmental Health.

HS5.2.3 Rules of access and admission requirements

A Bachelor's Degree in Environmental Health at NQF level 8 with an average of 65% or an equivalent qualification at an equivalent standard as determined by the Departmental Research Committee and approved by the Faculty Board. Submission of a draft proposal to the Departmental Research Committee and approval thereof is required in addition to the online application. The selection and allocation of postgraduate students depends on the availability of supervisors.

Selection criteria

Selection is based on approval by the Departmental Research Committee.

HS5.2.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS5.2.5 Curriculum

A research project and a dissertation:

Module name	Module code
Semester one	
Research Project and Dissertation: Health Sciences (Environmental Health)	DEH9XA1
Semester two	
Research Project and Dissertation: Health Sciences (Environmental Health)	DEH9XB1

HS5.3 MASTER OF PUBLIC HEALTH (M9EN3C)
Online Programme
Duration of programme
E-Learning: Minimum 2 years and maximum 3 years
NQF Level 9, 180 Credits
Course work 70% and minor dissertation 30%

HS5.3.1 Purpose

The purpose of the programme is to qualify health professionals who at the end of the programme will have been empowered to analyse, strategize and offer solutions to challenges faced by Sub-Saharan countries including South Africa with respects to Environmental and Occupational threats and risks.

HS5.3.2 Outcomes

On completion of this programme students will be able to:

1. Contextualise Public Health within the region and relevant countries' health systems, with specific focus on environmental and occupational health.
2. Conduct health risk assessments and to enumerate, understand, mitigate and manage these risks.
3. Develop relevant epidemiology and research methodologies for local, regional environmental and occupational health risks.
4. Develop a knowledge of related health economies.
5. Unpack environmental and occupational disasters that have local and regional relevance as learning opportunities in primary, secondary and tertiary prevention situations.
6. Take strategic decisions within the context of environmental and occupational health domains.

HS5.3.3 Rules of access and admission requirements

The minimum admission requirement is a Bachelor's Degree at NQF 8 in a related Health Field e.g Environmental Health, Epidemiology, MBChB, Social Work, Physiotherapy, Nursing and other related equivalent qualification. Three to five years' work experience in the Health sector inclusive of management position, research and/or project management. Applications from persons with equivalent qualifications will be considered by a constituted status committee in line with the University's and Faculty's regulations.

Selection criteria

Selection is based on approval by the Faculty and programme co-ordinator. The selection of Master's students will be done in accordance with rules and regulations of the Higher Degrees Committee of the University of Johannesburg as stipulated for inter-disciplinary programmes.

HS5.3.4 Pass requirements

Successful completion of the course work modules and minor dissertation. The MPH will only be offered on a part time basis over 2 years minimum and 3 years maximum.

HS5.3.5 Curriculum

First year		
Module name	Module Code	Prerequisite code / Exposure module
Principle and Practice of Environmental Health A	PPECAC1	
Principle and Practice of Environmental Health B	PPECBC1	PPECAC1 (pre-requisite)

HS5.4 PhD HEALTH SCIENCES: ENVIRONMENTAL HEALTH(P9HS3Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS5.4.1 Purpose

The purpose of this qualification is to provide qualifying students with analytical specific problem solving and reflective competencies at an advanced academic level culminating in the production of a thesis in the field of Environmental Health.

HS5.4.2 Outcomes

1. The student will be able to apply high-level critical thinking, reflective and research skills in order to perform research in the specialised area of Environmental Health.
2. The student will be able to conceptualise new research initiatives and new knowledge in the field of Environmental Health.

HS5.4.3 Rules of access and admission requirements

A Master's degree with an average of 65% in Environmental Health or an equivalent qualification at an equivalent standard as determined by the Departmental Research Committee and approved by the Faculty Board. Submission of a draft proposal to Departmental Research Committee and approval thereof is required in addition to the online application. The selection and allocation of postgraduate students depends on the availability of supervisors.

Selection criteria

Selection is based on academic merit and on approval by the Departmental Research Committee

HS5.4.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS5.4.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Environmental Health)	REH10X1
Semester two	
Research Project and Thesis: Health Sciences (Environmental Health)	REH10X2

HS5.5 **PhD HEALTH SCIENCES: PUBLIC HEALTH (P9HS6Q)**

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS5.5.1 Purpose

The purpose of this qualification is to provide qualifying students with advanced analytical, problem solving and reflective competencies as specialist in Public Health culminating in the production of a thesis and publications in Public Health.

HS5.5.2 Outcomes

1. The student will be able to apply high-level critical thinking, reflective and research skills in order to perform research in the specialised area of Environmental Health.
2. The student will be able to make an original contribution to the knowledge content of the discipline of Public Health through independent research.

HS5.5.3 Rules of access and admission requirements

A Master's Degree with an average of 65% in Public Health or an equivalent qualification at an equivalent standard as determined by the Departmental Research Committee and approved by the Faculty Board. Submission of a draft proposal to Departmental Research Committee and approval thereof is required in addition to the online application. The selection and allocation of postgraduate students depends on the availability of supervisors.

Selection criteria

Selection is based on academic merit and on approval by the Departmental Research Committee.

HS5.5.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg

HS5.5.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Public Health)	RPH10X1
Semester two	
Research Project and Thesis: Health Sciences (Public Health)	RPH10X2

HS6.0 DEPARTMENT OF HUMAN ANATOMY AND PHYSIOLOGY

HS6.1 MASTER OF HEALTH SCIENCES: HUMAN PHYSIOLOGY (M9HA1Q)

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF level 9; 180 Credits

Research thesis 100%

HS6.1.1 Purpose

The primary purpose of this qualification is to provide qualifying students with the ability to perform independent scientific research and contribute to the knowledge of and in Human Physiology through the specific discipline of research.

HS6.1.2 Outcomes

At the end of the qualification, the student will be able to:

1. Reflect upon, identify, formulate, prepare and solve research problems related to Human Physiology.
2. Execute a research project at the appropriate level by applying related research methodologies and in the proper formulation and submission of a Master's dissertation.
3. Acquire learning research competencies and abilities including the critical assessment of scientific literature, the execution of research methodologies including data gathering, its evaluation and reporting and the reasonable and justifiable argument of conclusions and future research recommendations based on the research project undertaken.

HS6.1.3 Rules of access and admission requirements

An Honours qualification in Human Physiology (NQF Level 8) or an equivalent qualification at an equivalent standard as determined by a Status Committee and approved by the Faculty Board.

Selection criteria

Selection will be based on:

- Consideration of a draft proposal after discussion with a potential identified supervisor
- Prior academic performance.

HS6.1.4 Pass requirements

Students are assessed via submission of a dissertation in line with the Senate Higher Degrees Policy and Postgraduate Administration Processes Policies of the University.

HS6.1.5 Curriculum

A research project and a thesis:

Module name	Module code
Semester one	
Research Project and Dissertation: Health Sciences (Human Physiology)	DHA9XA1
Semester two	
Research Project and Dissertation: Health Sciences (Human Physiology)	DHA9XB1

HS6.2 [MASTER OF HEALTH SCIENCES: HUMAN ANATOMY \(M9AT1Q\)](#)

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF level 9; 180 Credits

Research thesis 100%

HS6.2.1 Purpose

The primary purpose of this qualification is to provide qualifying students with the ability to perform independent scientific research and contribute to the knowledge of and in Human Anatomy through the specific discipline of research.

HS6.2.2 Outcomes

At the end of the qualification, the student will be able to:

1. Reflect upon, identify, formulate, prepare and solve research problems related to Human Anatomy.
2. Execute a research project at the appropriate level by applying related research methodologies and in the proper formulation and submission of a Master's dissertation
3. Acquire learning research competencies and abilities including the critical assessment of scientific literature, the execution of research methodologies including data gathering, its evaluation and reporting and the reasonable and justifiable argument of conclusions and future research recommendations based on the research project undertaken.

HS6.2.3 Rules of access and admission requirements

An honours qualification in Human Anatomy (NQF Level 8) or an equivalent qualification at an equivalent standard as determined by a Status Committee and approved by the Faculty Board.

Selection criteria

Selection will be based on:

- Consideration of a draft proposal after discussion with a potential identified supervisor
- Prior academic performance.

HS6.2.4 Pass requirements

Students are assessed via submission of a dissertation in line with the Senate Higher Degrees Policy and Postgraduate Administration Processes Policies of the University

HS6.2.5 Curriculum

A research project and a thesis:

Module name	Module code
Semester one	
Research Project and Dissertation: Health Sciences (Human Anatomy)	DAT9XA1
Semester two	
Research Project and Dissertation: Health Sciences (Human Anatomy)	DAT9XB1

HS6.3 **PhD HEALTH SCIENCES: HUMAN PHYSIOLOGY(P9H15Q)**

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS6.3.1 Purpose

The primary purpose of this qualification is to provide the qualifying student with advanced critical, analytical, problem-solving and reflective competencies in order to make an original, novel contribution to the knowledge content of the Human Physiology through independent research.

HS6.3.2 Outcomes

At the end of the qualification, candidates should:

1. Have a thorough knowledge of the literature and a comprehensive understanding of the scientific techniques applicable to their research.
2. Be able to critically evaluate current research and implement current research techniques.
3. Be able to act autonomously in the creation, implementation and interpretation of research in their field.

HS6.3.3 Rules of access and admission requirements

The minimum admission requirement is the possession of an MSc in Human Physiology with a programme specific minimum level of competency on NQF Level 9, generating a minimum of 180 credits.

HS6.2.4 Pass requirements

1. Students are assessed via submission of a thesis in line with the Senate Higher Degrees Policy and Postgraduate Administration Processes Policies of the University.
2. The doctoral examination will be written and will deal with the content of a submitted thesis, as well as those subdivisions of the field of study on which the thesis is based, if requested.

- It is expected of the candidate, in collaboration with the supervisor, to have prepared for publication two (2) manuscripts in a ready to submit format, in accordance with UJ policy and procedures.

HS6.2.5 Curriculum

A research project and a thesis:

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Human Physiology)	RHP10X1
Semester two	
Research Project and Thesis: Health Sciences (Human Physiology)	RHP10X2

HS6.4 [PhD HEALTH SCIENCES: HUMAN ANATOMY\(P9HS9Q\)](#)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS6.4.1 Purpose

The primary purpose of this qualification is to provide the qualifying student with advanced critical, analytical, problem-solving and reflective competencies in order to make an original, novel contribution to the knowledge content of the Human Anatomy through independent research.

HS6.4.2 Outcomes

At the end of the qualification, candidates should:

- Have a thorough knowledge of the literature and a comprehensive understanding of the scientific techniques applicable to their research.
- Be able to critically evaluate current research and implement current research techniques.
- Be able to act autonomously in the creation, implementation and interpretation of research in their field.

HS6.4.3 Rules of access and admission requirements

The minimum admission requirement is the possession of an MSc in Human Anatomy with a programme specific minimum level of competency on NQF Level 9, generating a minimum of 180 credits.

HS6.4.4 Pass requirements

- Students are assessed via submission of a thesis in line with the Senate Higher Degrees Policy and Postgraduate Administration Processes Policies of the University.
- The doctoral examination will be written and will deal with the content of a submitted thesis, as well as those subdivisions of the field of study on which the thesis is based, if requested.
- It is expected of the candidate, in collaboration with the supervisor, to have prepared

for publication two (2) manuscripts in a ready to submit format, in accordance with UJ policy and procedures.

HS6.4.5 Curriculum

A research project and a thesis:

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Human Anatomy)	RHA10X1
Semester two	
Research Project and Thesis: Health Sciences (Human Anatomy)	RHA10X2

HS7.0 **DEPARTMENT OF MEDICAL IMAGING AND RADIATION SCIENCES (MIRS)**

HS7.1 **BACHELOR OF DIAGNOSTIC RADIOGRAPHY (B9M01Q)**

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

Work integrated learning (WIL) is incorporated into the employment contract with the respective clinical training centre.

HS7.1.1 Purpose

The purpose of this qualification is to develop a competent professional, who has thorough grounding in the knowledge and skills required for Diagnostic Radiography and who has gained experience in applying such knowledge and skills in accredited workplaces.

Successful completion of this qualification will entitle the student to register with the Health Professions Council of South Africa (HPCSA) as a Diagnostic Radiographer.

HS7.1.2 Outcomes

After completion of the programme, the student will be able to:

1. Perform routine and specialized radiographic procedures to produce images of diagnostic quality.
2. Access, organize and present information applicable to the radiography context in order to record, retrieve and communicate patient data.
3. Evaluate the quality of routine and specialized radiographic images and perform image interpretation to identify normal and abnormal appearances.
4. Plan, develop and apply total quality management appropriate to the diagnostic radiography context.
5. Perform safe and effective patient care in accordance with the patient's needs and departmental protocol to provide a quality service and to maintain the welfare of the patient.
6. Apply the principles of human rights, ethics and relevant medical law which ensure the well-being of the patient.
7. Apply the principles, specific knowledge, skills and values related to one of the chosen electives as listed.
8. Conduct research.

HS7.1.3 Rules of access and admission requirements

A Senior Certificate or an equivalent qualification at an equivalent standard as determined by a Faculty Status Committee, with the following Subjects:

- Mathematics with a Higher Grade D or Standard Grade C symbol.
- Physical Science with a Higher Grade D or Standard Grade C symbol.
- Biology with a Higher Grade C or Standard Grade B symbol or,
- Physiology with a Higher Grade C or Standard Grade B symbol.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
31	5	4	Not accepted	4	5

Selection criteria

Selection will be based on:

- Academic merits;
- Clinical placement in a Health Professional Council of South Africa accredited clinical training site.

HS7.1.4 Pass requirements

1. Students retain credits for all modules passed except where requirement 2 applies;
2. If a student fails any module in any level of study, he/she forfeits the credits for the Diagnostic Clinical Practice Module for that level of study but retain credits for all other modules passed.
3. Students may enrol for a module in the following year of study provided that they have passed the prerequisite module/s.
4. Students may not register for module combinations that lead to timetable clashes. The Department will make the final decision as to the modules for which the student may register.
5. Students are promoted:
 - 5.1 to the second year of study if they have passed all the first-year modules.
 - 5.2 to the third year of study if they have passed all the second-year modules.
 - 5.3 to the fourth year of study if they have passed all the third-year modules.
6. To be admitted to any module in the second or third academic year of study, and progress to the following year of study, students must have passed at least 60% of the modules in the previous year of study.
7. Students must pass at least 3 out of the 7 modules in the first year of study in order to qualify for readmission to the first year of study.
8. A range of assessment strategies and weightings, as laid out in the relevant module's learning guide, explains the continuous assessment criteria specified for promotion to the next year of study.

HS7.1.5 Specific rules and regulations for Medical Imaging and Radiation Sciences students

1. Students must familiarize themselves with the internal rules and regulations of the

- Department of Medical Imaging and Radiation Sciences. These rules and regulations, as set out in the Departmental policy document, are binding.
- The programme is not offered as a limited contact or distance learning programme. Students who elect to leave the country will be unable to continue with their studies.
 - All students are required to complete a minimum number of clinical hours / competencies as stipulated by the HPCSA at the time.

HS7.1.6 Curriculum

All modules are Continuous Evaluation modules.

HS7.2 BACHELOR OF DIAGNOSTIC ULTRASOUND (B9M03Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

Work integrated learning (WIL) is incorporated into the employment contract with the respective clinical training centre.

HS7.2.1 Purpose

The purpose of the qualification is to develop a competent professional, who has a thorough knowledge and the skills required for the profession of Diagnostic Ultrasound and who has gained experience in applying such knowledge and skills in accredited workplaces. Successful completion of this qualification will entitle the student to register with the Health Professions Council of South Africa (HPCSA) as a Sonographer.

HS7.2.2 Outcomes

After completion of the programme, the student will be able to:

1. Demonstrate the knowledge of natural and life sciences and pathology that enables application in the clinical field.
2. Assess and perform patient care in a manner which ensures that the patient's welfare is maintained.
3. Apply the principles of human rights, ethics and medical law which ensure the well-being of the patient.
4. Perform the sonographic protocols and procedures to produce optimum quality images in the specified areas of diagnostic ultrasound.
5. Critically assess the sonographic images and apply pattern recognition to determine aberrant appearances in keeping with pathology.
6. Apply the ultrasound specific measures which ensure that the health and safety of patients, self and colleagues are maintained.
7. Plan, develop and apply total quality management appropriate to the sonographic context.
8. Demonstrate research skills and foster a research climate in Ultrasound imaging.

HS7.2.3 Rules of access and admission requirements

A Senior Certificate or an equivalent qualification at an equivalent standard as determined by a Faculty Status Committee, with the following Subjects:

- Mathematics with a Higher Grade D or Standard Grade C symbol.
- Physical Science with a Higher Grade D or Standard Grade C symbol and
- Biology with a Higher Grade C or Standard Grade B symbol or
- Physiology with a Higher Grade C or Standard Grade B symbol.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
31	5	4	Not accepted	4	5

Selection criteria

Selection will be based on:

- Academic merits.
- Clinical placement in a Health Professional Council of South Africa accredited clinical training site.

HS7.2.4 Pass requirements

1. Students retain credits for all modules passed except where requirement 2 applies;
2. If a student fails any module in any level of study, he/she forfeits the credits for the Diagnostic Ultrasound Clinical Practice Module for that level of study but retain credits for all other modules passed.
3. Students may enrol for a module in the following year of study provided that they have passed the prerequisite module/s.
4. Students may not register for module combinations that lead to timetable clashes. The Department will make the final decision as to the modules for which the student may register.
5. Students are promoted:
 - 5.1 to the second year of study if they have passed all the first-year modules.
 - 5.2 to the third year of study if they have passed all the second-year modules.
 - 5.3 to the fourth year of study if they have passed all the third-year modules.
6. To be admitted to any module in the second or third academic year of study, and progress to the following year of study, students must have passed at least 60% of the modules in the previous year of study.
7. Students must pass at least 3 out of the 7 modules in the first year of study in order to qualify for readmission to the first year of study.
8. A range of assessment strategies and weightings, as laid out in the relevant module's learning guide, explains the continuous assessment criteria specified for promotion to the next year of study.

HS7.2.5 Specific rules and regulations for Medical Imaging and Radiation Sciences students

1. Students must familiarize themselves with the internal rules and regulations of the Department of Medical Imaging and Radiation Sciences. These rules and regulations, as set out in the Departmental policy document, are binding.
2. The programme is not offered as a limited contact or distance learning programme. Students who elect to leave the country will be unable to continue with their studies.
3. All students are required to complete a minimum number of clinical hours / competencies as stipulated by the HPCSA at the time.

HS7.2.6 Curriculum

All modules are Continuous Evaluation modules.

First year

HS7.3 **BACHELOR OF NUCLEAR MEDICINE TECHNOLOGY (B9M02Q)**

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

Work integrated learning (WIL) is incorporated into the employment contract with the respective clinical training centre.

HS7.3.1 **Purpose**

The purpose of the qualification is to develop a competent professional nuclear medicine technologist who has thorough grounding in the knowledge and skills required for Nuclear Medicine Technology and who has gained experience in the application of such knowledge and skills in accredited workplaces.

Successful completion of this qualification will entitle the student to register with the Health Professions Council of South Africa (HPCSA) as a Nuclear Medicine Technologist.

HS7.3.2 **Outcomes**

After completion of the programme, the student will be able to:

1. Apply principles of human rights, ethics and relevant medical law to ensure the well-

- being of the patient.
2. Perform a range of conventional and specialized nuclear medicine imaging procedures in order to facilitate diagnosis and treatment of the patient.
 3. Operate and ensure quality functioning of all nuclear medicine instrumentation to provide the best diagnostic capability of the instruments.
 4. Function in a type 'B' radiopharmacy laboratory to safely dispense radiopharmaceuticals for nuclear medicine imaging procedures.
 5. Perform a range of in-vitro and in-vivo non-imaging nuclear medicine procedures in a type 'C' radiopharmacy laboratory.
 6. Assure quality of all aspects of a nuclear medicine investigation and the service provided.
 7. Plan, develop and apply total quality management appropriate to the nuclear medicine context.
 8. Demonstrate research skills and foster a research climate in nuclear medicine.
 9. Apply the principles, specific knowledge, skills and values related to the chosen elective subject.

HS7.3.3 Rules of access and admission requirements

A Senior Certificate or an equivalent qualification at an equivalent standard as determined by a Faculty Status Committee, with the following Subjects:

- Mathematics with a Higher Grade D or Standard Grade C symbol.
- Physical Science with a Higher Grade D or Standard Grade C symbol.
- Biology with a Higher Grade C or Standard Grade B symbol or,
- Physiology with a Higher Grade C or Standard Grade B symbol.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
31	5	4	Not accepted	4	5

Selection criteria

Selection will be based on:

HS7.4 BACHELOR OF RADIATION THERAPY (B9M04Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

Work integrated learning (WIL) is incorporated into the employment contract with the respective clinical training centre.

HS7.4.1 Purpose

The purpose of the qualification is to develop a professional radiation therapist who is competent in the knowledge and skills required for Radiation Therapy and has gained experience in applying such knowledge and skills in accredited workplaces.

Successful completion of this qualification will entitle the student to register with the Health Professions Council of South Africa (HPCSA) as a Radiation Therapist.

HS7.4.2 Outcomes

After completion of the programme, the student will be able to:

1. Apply the principles of human rights, ethics and relevant medical law which ensure the well-being of the patient.
2. Demonstrate a critical understanding and application of quality assurance and radiation protection in a Radiation Therapy division.
3. Apply scientific knowledge and technical skills to perform radiation oncology laboratory techniques and procedures.
4. Perform radiotherapy procedures competently to ensure optimal radiation localization and immobilization for radiation treatment.
5. Perform radiotherapy procedures competently to ensure optimal treatment planning.
6. Apply scientific knowledge and professional skills to perform therapeutic procedures for accurate delivery of the radiation treatment prescribed.
7. Plan, develop and apply total quality management appropriate to the radiation therapy context.
8. Demonstrate research skills and foster a research climate in radiation therapy.
9. Apply the principles, specific knowledge, skills and values related to the chosen elective subject.

HS7.4.3 Rules of access and admission requirements

A Senior Certificate or an equivalent qualification at an equivalent standard as determined by a Faculty Status Committee, with the following Subjects:

- Mathematics with a Higher Grade D or Standard Grade C symbol.
- Physical Science with a Higher Grade D or Standard Grade C symbol.
- Biology with a Higher Grade C or Standard Grade B symbol or,
- Physiology with a Higher Grade C or Standard Grade B symbol.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
31	5	4	Not accepted	4	5

Selection criteria

Selection will be based on:

- Academic merits.
- Clinical placement in a Health Professional Council of South Africa accredited clinical training site.

HS7.4.4 Pass requirements

1. Students retain credits for all modules passed except where requirement 2 applies;
2. If a student fails any module in any level of study, he/she forfeits the credits for the Radiation Therapy Clinical Practice Module for that level of study but retain credits for all other modules passed.
3. Students may enrol for a module in the following year of study provided that they have passed the prerequisite module/s.
4. Students may not register for module combinations that lead to timetable clashes. The Department will make the final decision as to the modules for which the student may register.
5. Students are promoted:
 - 5.1 to the second year of study if they have passed all the first-year modules.
 - 5.2 to the third year of study if they have passed all the second-year modules.
 - 5.3 to the fourth year of study if they have passed all the third-year modules.
6. To be admitted to any module in the second or third academic year of study, and progress to the following year of study, students must have passed at least 60% of the modules in the previous year of study.
7. Students must pass at least 3 out of the 7 modules in the first year of study in order to qualify for readmission to the first year of study.
8. A range of assessment strategies and weightings, as laid out in the relevant module's learning guide, explains the continuous assessment criteria specified for promotion to the next year of study.

HS7.4.5 Specific rules and regulations for Medical Imaging and Radiation Sciences students

1. Students must familiarize themselves with the internal rules and regulations of the Department of Medical Imaging and Radiation Sciences. These rules and regulations, as set out in the Departmental policy document, are binding.
2. The programme is not offered as a limited contact or distance learning programme. Students who elect to leave the country will be unable to continue with their studies.
3. All students are required to complete a minimum number of clinical hours/competencies as stipulated by the HPCSA at the time.

HS7.5 **[MASTER OF MEDICAL IMAGING AND RADIATION SCIENCES \(M9MI1Q\)](#)**

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF level 9

Research thesis 100%

HS7.5.1 Purpose

The purpose of the Master of Medical Imaging and Radiation Sciences is to enable successful learners to make a contribution to a chosen field of radiography through independent research, using advanced problem-solving skills and critical, reflective thinking. The learner will report the findings in a manner that meets the accepted criteria and ethical principles of the profession. The research problem, its justification, process and outcome will be reported in a dissertation that complies with the generally accepted norms for research at a Master's level. In this way, the learner will make a contribution to the existing body of knowledge for radiography ranging from fundamental concepts to advanced theoretical or applied knowledge that will develop and advance the radiography profession.

HS7.5.2 Outcomes

The students will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Report research findings at the appropriate level.
6. Make conclusions, suggestions and recommendations based on the data collected that are reasonable and justifiable.

HS7.5.3 Rules of access and admission requirements

The minimum requirement is a Radiography related qualification at NQF level 8 or equivalent. Applications from person with an equivalent qualification will be considered by a constituted status committee in line with the University's and faculty's regulations.

Selection criteria

The selection of Master's students will be done in accordance with rules and regulations of the Higher Degrees Committee of the University of Johannesburg as stipulated for postgraduate programmes. Selection includes an approval of the student's research concept by the Department Research Committee which will grant the student permission to register and then develop a research proposal.

HS7.5.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS7.5.5 Curriculum

A research project and a thesis:

Module name	Module code
Semester one	
Research Project and Dissertation: Health Sciences (Medical Imaging and Radiation)	DMI9XA1
Semester two	
Research Project and Dissertation: Health Sciences (Medical Imaging and Radiation)	DMI9XB1

HS7.6 PhD HEALTH SCIENCES: MEDICAL IMAGING AND RADIATION SCIENCES (P9HS8Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS7.6.1 Purpose

The purpose of the PhD (Health Sciences) is to promote the career advancement of students in the area of Health Sciences by enabling students to conduct independent, novel research within a specific discipline or in a multidisciplinary manner in Health Sciences that will contribute to the knowledge and practice in the area of Health Sciences.

The defining characteristic of this programme is that the candidate is required to demonstrate high level research capability and to make a significant and original academic contribution at the frontiers of health science. The research output must be of a quality to satisfy peer review and merit publication. It is intended that the student will undertake original research. The student who successfully completes this qualification will be able to apply higher level problem solving skills and critical, reflective thinking at the most advanced academic levels in the Medical Imaging and Radiation Sciences (MIRS) domain.

HS7.6.2 Outcomes

1. Demonstrate a systematic understanding of the domain of MIRS and a mastery of the skills and methods of research associated with the domain of MIRS.
2. Conceive, design, implement and disseminate a substantial process of research with scholarly integrity.
3. Make a contribution through original research that extends the frontier of knowledge by developing a substantial body of work in an area of MIRS, some of which merits national or international refereed publication.

HS7.6.3 Rules of access and admission requirements

The minimum admission requirement is a master's degree in MIRS or Radiography qualification or equivalent. Selection is based on approval by the Faculty's Higher Degrees Committee.

Selection criteria

Applications from persons with an equivalent qualification will be considered by a constituted status committee in line with the University's and Faculty's regulations.

Selection includes an approval of the student's research concept by the Department Research Committee which will grant the student permission to register and then develop a research proposal.

The selection and allocation of post-graduate students depends on the availability of supervisors.

HS7.6.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

Certification of compliance with the requirements of the qualification is in accordance with the Certification Policy of the University, with due regard to the responsibility of the students, supervisors, relevant faculty administration officer, the Executive Dean of the faculty and the Registrar.

HS7.6.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Medical Imaging and Radiation Sciences)	RM110X1
Semester two	
Research Project and Thesis: Health Sciences (Medical Imaging and Radiation Sciences)	RM110X2

HS8.0 DEPARTMENT OF NURSING

HS8.1 BACHELOR OF NURSING (B9N02Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS8.1.1 Purpose

The purpose of the Bachelor of Nursing is to produce professional graduates competent in the knowledge and skills required for managing and providing an integrated, holistic, scientifically based nursing and midwifery health care service to society. The aim is to develop reflective, caring practitioners capable of integrating principles, theory, proven techniques and relevant clinical skills in the delivery of a service, focusing on the promotion of health, prevention, diagnosis, treatment and rehabilitation of nursing and midwifery related problems. On completion of this programme, graduates will be able to register with SANC as a professional nurse and midwife, entitling them to practice independently and within a multidisciplinary team in the private or public health sector or in the education or research sector.

HS8.1.2 Outcome

1. Apply and execute the scientific principles of comprehensive nursing and midwifery care as a professional nurse and midwife.
2. Apply and justify the principle of research and science-based problem-solving.

HS8.1.3 Rules of access and admission requirements

At entrance level, the prospective student should hold a Further Education Certificate (level 4), with full exemption.

Owing to the limited number of clinical learning facilities, the following two additional selection criteria shall also apply:

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
30	5	4	Not accepted	4	4

Selection criteria for this programme.

Selection will be based on:

- Academic merit; APS score
- English proficiency

HS8.1.4 Pass requirements

1. Students may enrol for a module in the following year, provided that:
 - (a) They have passed the prerequisites modules.
 - (b) The module selection does not lead to timetable clashes.
2. First year students must pass a minimum of 60% of the first-year modules as well as the prerequisites to proceed to the next level. This includes both the theoretical and clinical modules.
3. 100% attendance of all class and clinical practicals is compulsory.
4. Students may not register for the same module for a third time without permission from the Head of Department and Executive Dean.
5. Students have a maximum of six years to complete the qualification.

HS8.1.5 Clinical Practice (Work Integrated Learning in an accredited clinical institution)

1. Students should comply with the clinical/practical formative and summative assessment requirements in order to found competent in clinical skills.
2. Be registered as a Student Nurse with South African Nursing Council (SANC)
3. Students must by the end of each year complete the number of hours as regulated by the SANC for clinical practice which are detailed in the study guides and Bachelor of Nursing policy.

HS8.2 **POSTGRADUATE DIPLOMA IN MIDWIFERY (E9MW1Q)**

Duration of programme

Part-Time: 2 years

NQF Level 8, 120 Credits

HS8.2.1 **Purpose**

The purpose of Postgraduate Diploma in Midwifery is to strengthen and deepen students' knowledge and skills in the field of midwifery, required to undertake advanced reflection and development by means of critical thinking and clinical decision making, practice and research methods. The aim is to empower midwife specialists with key competencies i.e. knowledge, skills, attitudes and values. On completion of this programme, graduates will be able to register with the South African Nursing Council (SANC) midwife specialists, entitling them to work independently within the multidisciplinary team to provide promotive, preventive, curative and rehabilitative services to individuals, families, groups, and communities.

HS8.2.2 **Outcome**

1. Apply competencies to practice as an independent midwife specialist in midwifery clinical area, public and private sector.
2. Articulate vertically to any relevant degree at NQF level 9, for an example: Master's in midwifery.

HS8.2.3 **Rules of access and admission requirements**

Students are admitted in accordance with the national prescribed admittance criteria as provided by the Higher Education Qualifications Framework (HEQF), and institutional policies which include the Academic Regulations Policy and the Policy on Admission and Selection of the University of Johannesburg. The latter policy states that academics involved in selection and admission "considers the need to redress past inequalities, aims to provide equity, quality and academic excellence. The UJ Academic Regulations Policy instructs academics to ensure that admission is subject to the student equity profile.

Minimum Admission Requirements

1. A Bachelor's Degree in Nursing (R.174), alternatively.
2. A Bachelor's Degree in Nursing (R.425)
3. A Diploma in Nursing: General Nurse (R.171) with Advanced Diploma in Midwifery (R.1497).
4. Minimum of two (2) years' experiences, inclusive of a year of community service, as a Professional Nurse or General Nurse and Midwife.
5. Proof of registration with the SANC as a Professional Nurse or General Nurse and Midwife.
6. Proof of employment, detailing midwifery experience in years.
7. Approval from your Nursing Service Manager (NSM) to register for the programme and rotate through midwifery/maternity units.
8. The prospective student should remain employed at the institution where the permission has been granted by the NSM for the duration of the programme period.

Programme selection requirements

1. Signed agreement from NSM and/or preceptor to assist with the practical component.
2. Signed NSM agreement to move candidate to a clinical training facility approved and accredited by SANC for University of Johannesburg.

3. Minimum two (2) years midwifery clinical experience.
4. Professional indemnity.
5. Letter of permission from the clinical preceptor pledging the clinical academic support.

HS8.2.4 Curriculum

HS8.3 **POSTGRADUATE DIPLOMA IN CRITICAL CARE NURSING (ADULT) (E9IC1Q)**

Duration of programme

Part-Time: 2 years

NQF Level 8, 130 Credits

HS8.3.1 Purpose

The purpose of Postgraduate Diploma in Critical Care Nursing (Adult) is to strengthen and deepen students' knowledge and expertise in adult critical care as a specialty of the nursing profession. It is designed to develop the student's skills based on current thinking, practice, and research methods in the field of adult critical care nursing. The aim is to empower the critical care nursing specialists with key competencies i.e.: knowledge, skills, attitudes, and values. On completion of this programme, graduates will be able to register with the South African Nursing Council (SANC) as critical care nursing specialists, entitling them to work independently within the multidisciplinary team to undertake professional and highly skilled work in adult critical care. This includes prevention of diseases, injuries, complications, screening, appropriate management, and prompt referral of patients with specific and complex health problems in the adult critical care settings.

HS8.3.2 Outcome

1. Apply competencies to practice as an independent specialist in adult critical care setting, public and private sector.
2. Articulate vertically to any relevant degree at NQF level 9, for an example: Master's in Medical and Surgical Nursing Science.

HS8.3.3 Rules of access and admission requirements

Students are admitted in accordance with the national prescribed admittance criteria as provided by the Higher Education Qualifications Framework (HEQF), and institutional policies which include the Academic Regulations Policy and the Policy on Admission and Selection of the University of Johannesburg (UJ). The latter policy states that academics involved in selection and admission "considers the need to redress past inequalities, aims to provide equity, quality and academic excellence..." The UJ Academic Regulations Policy instructs academics to ensure that admission is subject to the student equity profile.

Minimum Admission Requirements

1. A Bachelor's Degree in Nursing (R.174), alternatively
2. A Bachelor's Degree in Nursing (R.425)
3. A Diploma in Nursing: General Nurse (R.171) with Advanced Diploma in Midwifery (R.1497).
4. Minimum of two (2) years' experience, (inclusive of a year of community service) after registration with the South African Nursing Council (SANC) as a Professional Nurse or General Nurse and Midwife.
5. A minimum of two (2) years of post-basic clinical experience in adult critical care.
6. Proof of current registration with the SANC as a Professional Nurse or General Nurse and Midwife.
7. Proof of employment, detailing adult critical care experience in years.
8. Approval from your Nursing Service Manager (NSM) to register for the programme and rotate through adult critical care health settings.
9. The prospective student should remain employed at the institution where the permission has been granted by the NSM for the duration of the programme period.

Programme selection requirements

1. Signed agreement from NSM and/or preceptor to assist with the practical component.
2. Signed NSM agreement to move candidate to a clinical training facility approved and accredited by SANC for University of Johannesburg.
3. Minimum of two (2) years of critical care nursing (adult) experience.
4. Professional indemnity.
5. Letter of permission from the clinical preceptor pledging the clinical academic support.

HS8.7 [POSTGRADUATE DIPLOMA IN OCCUPATIONAL HEALTH NURSING \(E9OC1Q\)](#)

Duration of programme

Part-Time: 2 years

NQF Level 8, 128 Credits

HS8.7.1 Purpose

The purpose of Postgraduate Diploma in Occupational Health Nursing is to strengthen and deepen students' knowledge and skills in the field of occupational health nursing. It is required to undertake advanced reflection and development by means of critical thinking and clinical decision making, practice and research methods. The aim is to empower occupational health specialists with key competencies i.e., knowledge, skills, attitudes and values. On completion of this programme, graduates will be able to register with the South African Nursing Council (SANC) occupational health specialists, entitling them to work independently within the multidisciplinary team to provide promotive, preventive, curative and rehabilitative services to individuals, families, groups, and communities.

HS8.7.2 Outcome

1. Apply competencies to practice as an independent occupational health specialist in occupational clinical area, public and private sector.
2. Articulate vertically to any relevant degree at NQF level 9, for an example: Master's in occupational health nursing.

HS8.7.3 Rules of access and admission requirements

Students are admitted in accordance with the national prescribed admittance criteria as provided by the Higher Education Qualifications Framework (HEQF), and institutional policies which include the Academic Regulations Policy and the Policy on Admission and Selection of the University of Johannesburg. The latter policy states that academics involved in selection and admission “considers the need to redress past inequalities, aims to provide equity, quality and academic excellence. The UJ Academic Regulations Policy instructs academics to ensure that admission is subject to the student equity profile.

Minimum Admission Requirements

- A Bachelor's Degree in Nursing (R.174), alternatively.
- A Bachelor's Degree in Nursing (R.425)
- A Diploma in Nursing: General Nurse (R.171) with Advanced Diploma in Midwifery (R.1497).
- 4 Year Diploma in Nursing and Midwifery offered under Regulation 425 of February 1985 as amended.
- A Diploma in Nursing: General Nurse (R.171) with Advanced Diploma in Midwifery (R.1497).
- Year Diploma (Bridging Course) Leading to registration as General or Psychiatric Nurse offered under Regulation 683 of 14 April 1989 as amended, followed by 1-year Diploma in Midwifery offered under Regulation 254 of 14 February 1975 as amended.
- Minimum of two (2) years' experiences, inclusive of a year of community service, after registration by the South African Nursing Council as a Professional Nurse or General Nurse and Midwife.
- Proof of registration with the SANC as a Professional Nurse or General Nurse and Midwife.
- Approval from your Nursing Service Manager (NSM) to register for the programme.

Programme selection requirements

- Signed agreement from NSM and/or preceptor to assist with the practical component.
- Signed NSM agreement to move candidate to a clinical training facility approved and accredited by SANC for University of Johannesburg.
- Minimum two (2) years occupational health nursing clinical experience.
- Professional indemnity.
- Letter of permission from the clinical preceptor pledging the clinical academic support.

2. Proof of registration as a general nurse and nurse manager with the SANC.
3. A candidate must be appointed in an approved full-time or part-time post as a nursing practitioner for the duration of the programme if necessitated by the research topic.

HS8.15.4 Pass requirements

The general regulations for master's degrees are applicable to this qualification.

HS8.15.5 Curriculum

A dissertation on an approved topic

Module name	Module code
Semester one	
Dissertation: Professional Nursing Administration Semester 1	NSM9X01
Semester two	
Dissertation: Professional Nursing Administration Semester 2	NSM9X02

HS8.16 **MASTER OF NURSING SCIENCE IN PSYCHIATRIC MENTAL HEALTH NURSING (M9N18Q)**

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF Level 9, 180 Credits (HEQF aligned)

Research dissertation 100%

HS8.16.1 Purpose

The primary purpose of this qualification is to develop the intellectual and practical competencies of the qualifying student and to facilitate her/his professional values to promote the health of the individual, family, group and community as a specialist, leader and consultant in and as a member of the nursing/psychiatric/health team through her/his research, professional and clinical abilities. This qualification serves as a basis for advanced learning.

HS8.16.2 Outcome

Practice as an advanced clinical nurse specialist, leader, consultant and researcher.

HS8.16.3 Rules of access and admission requirements

At entrance level, the prospective student should have a Bachelor's degree with a minimum of 480 approved credits at level 8 or a post graduate diploma at NQF level 8.

Additional selection criteria

1. A minimum of 65% in the core modules in the undergraduate qualification in which the student intends to obtain the master's degree.
2. Proof of registration as a general nurse and post-basic psychiatric nurse with the SANC.
3. A candidate must be appointed in an approved full-time or part-time post as a nursing practitioner for the duration of the programme if necessitated by the research topic.

HS8.16.4 Pass requirements

The general regulations for master's degrees are applicable to this qualification.

HS8.16.5 Curriculum

A dissertation on an approved topic

Module name	Module code
Semester one	
Dissertation: Psychiatric Nursing Science: Semester 1	NPD9X01
Semester two	
Dissertation: Psychiatric Nursing Science: Semester 2	NPD9X02

HS8.17 **DOCTOR OF NURSING SCIENCE**

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF Level 10, 360 Credits

Research thesis 100%

With specialisation choices in the following:

- 1. Community Nursing Science (P9N01Q)**
- 2. Medical and Surgical Nursing Science: Critical Care Nursing (General): (P9N06Q)**
- 3. Maternal and Child Nursing Science: Neonatal Nursing Science (P9N05Q)**
- 4. Professional Nursing Science: Nursing Education (P9N14Q)**
- 5. Psychiatric Mental Health Nursing Science (P9N02Q)**
- 6. Professional Nursing Science (P9N03Q)**
- 7. Community Health Nursing Science: Primary Health Care (P9N08Q)**

HS8.17.1 Purpose

The primary purpose of this qualification is to provide the qualifying student with advanced critical, analytical, problem-solving and reflective competencies as a nursing specialist to act as a leader and consultant in health services and to make an original contribution to the knowledge content of the discipline through independent research. The qualifying student should display insight into the module discipline, as well as into research. This should include competence in the oral and written communication of the research process and findings.

HS8.17.2 Outcome

1. Expertise and critical knowledge in an area at the forefront of the field discipline or practice.
2. The ability to conceptualise new research initiatives and create new knowledge or practice.

Additional Selection Criteria:

1. Community Health Nursing Science: (P9N01Q)

- 1.1. An appropriate master's degree qualification in Nursing Science/Professional Practice. A student intending to enrol for a doctorate degree must have obtained a minimum of 65% in the completed master's degree programme.
- 1.2. Requirements for continued registration (usually during the second and third year of study): the student must demonstrate satisfactory progress with the thesis, as

- required by die Faculty Higher Degrees Committee of the University.
- 1.3. Registration as a Community Health Nurse with SANC.

2. Medical and Surgical Nursing Science: Critical Care Nursing (General): (P9N06Q)

- 2.1. An appropriate master's degree qualification in Advanced Nursing Science/Professional Practice. A student intending to enrol for a doctorate degree must have obtained a minimum of 65% in the completed master's degree programme.
- 2.2. Requirements for continued registration (usually during the second and third year of study): the student must demonstrate satisfactory progress with the thesis, as required by die Faculty Higher Degrees Committee of the University.
- 2.3. Registration as a Critical Care Nurse with SANC.

3. Maternal and Child Nursing Science: Neonatal Nursing Science: (P9N05Q)

- 3.1. An appropriate master's degree qualification in Nursing Science/Professional Practice. A student intending to enrol for a doctorate degree must have obtained a minimum of 65% in the completed master's degree programme.
- 3.2. Requirements for continued registration (usually during the second and third year of study): the student must demonstrate satisfactory progress with the thesis, as required by die Faculty Higher Degrees Committee of the University.
- 3.3. Registered as an Advance Midwife and Neonatal Nurse with SANC.

4. Professional Nursing Science: Nursing Education: (P9N14Q)

- 4.1 An appropriate master's degree qualification in Nursing Science/Professional Practice. A student intending to enrol for a doctorate degree must have obtained a minimum of 65% in the completed master's degree programme.
- 4.2 Requirements for continued registration (usually during the second and third year of study): the student must demonstrate satisfactory progress with the thesis, as required by die Faculty Higher Degrees Committee of the University.
- 4.3 Registration as a Post Basic Nurse Educator with SANC.

5. Psychiatric Mental Health Nursing Science: (P9N02Q)

- 5.1. An appropriate master's degree qualification in Nursing Science/Professional Practice. A student intending to enrol for a doctorate degree must have obtained a minimum of 65% in the completed master's degree programme.
- 5.2. Requirements for continued registration (usually during the second and third year of study): the student must demonstrate satisfactory progress with the thesis, as required by die Faculty Higher Degrees Committee of the University.
- 5.3 Registration as a Psychiatric Nurse with SANC.

6. Professional Nursing Science: (P9N03Q)

- 6.1 An appropriate master's degree qualification in Nursing Science/Professional Practice. A student intending to enrol for a doctorate degree must have obtained a minimum of 65% in the completed master's degree programme.
- 6.2 Requirements for continued registration (usually during the second and third year of study): the student must demonstrate satisfactory progress with the thesis, as required by the Faculty Higher Degrees Committee of the University.

7. Community Health Nursing Science: Primary Health Care: (P9N08Q)

- 7.1 An appropriate master's degree qualification in Nursing Science/Professional Practice. A student intending to enrol for a doctorate degree must have obtained

- a minimum of 65% in the completed master's degree programme.
- 7.2 Requirements for continued registration (usually during the second and third year of study): the student must demonstrate satisfactory progress with the thesis, as required by the Faculty Higher Degrees Committee of the University.
- 7.3 Registration as a Primary Health Care Nurse with SANC.

HS8.17.3 Rules of access and admission requirements

1. At entrance level, the prospective student should have a minimum of 180 approved credits at level 9.
2. The prospective student should have obtained a minimum of 65% in the completed master's degree programme.
3. Registration at SANC as a Nurse in the field that the speciality has been chosen if necessitated by the research topic.
4. PhD orientation programme will be by invitation and will not be compulsory for the selection to the programme. The programme adds value to the knowledge acquisition.

HS8.17.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS8.17.5 Curriculum

A research thesis. The research component is 100%.

HS9.0 DEPARTMENT OF OPTOMETRY

HS9.1 BACHELOR OF OPTOMETRY (B9O02Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS9.1.1 Purpose

The primary purpose of this qualification is to provide qualifying students with the ability to:

1. Perform visual examinations and relevant procedures included in the scope of Optometry (as stipulated by the Professional Board of Optometry and Dispensing Opticians) in the clinical environment as an optometrist.
2. Independently apply promotive, diagnostic and treatment strategies in a cost-effective manner appropriate to the needs of the community.
3. Use critical reasoning for holistic optometric management strategies in the diagnosis.
4. Establish a foundation for research and life skills for lifelong learning.

HS9.1.2 Outcomes

1. Apply thorough competency in professional and clinical responsibilities, scientific optometric skills, optical and allied technologies to ascertain the accuracy of the prescription of the eye care products to visually compromised people.
2. Apply scientific health care skills and optometric technologies in the interactive consultation of patient history while adhering to appropriate medico-legal ethics, health and safety regulations and codes of conduct.
3. Apply scientific health care skills and optometric technologies in the examination of eye and eye related conditions within the context of health services appropriate to the needs of the community, while adhering to appropriate medico-legal ethics, health and safety regulations and codes of conduct.
4. Interact consultatively in the diagnosis of eye and eye related conditions and delivery of eye care products, therapy and medication to visually compromised people, with knowledge of minimum standards of optometric care.
5. Interact consultatively in the management and delivery of eye care products, therapy and medication to visually compromised people, with knowledge of minimum standards of optometric care.
6. Record and maintain legible, secure data and patient information while adhering to appropriate medico-legal ethics, health and safety regulations and codes of conduct stated in the patient charter.
7. Manage and administer human, technical and other resources to ensure optimal diagnosis, prescription and delivery of eye and visual care products or services.
8. Apply self-reflective learning strategies to continually improve the optometrically related service within health care services appropriate to the specific needs of the patient/client to ensure professional contribution to the needs of the society.

HS9.1.3 Rules of access and admission requirements

Please note:

The admission requirements stated below are the minimum requirements to be considered for selection. Even if all minimum requirements are met, due to selection being based on academic excellence and limited number of places available in the program, acceptance into the program is not assured.

1. Language requirements.
2. Students who register at UJ for the first time for the Bachelor of Optometry degree

presented through the medium of English must have obtained one of the following results (as the minimum) in their final Grade 12 examination: C symbol for English first Language, HG C symbol for English second Language, HG B symbol for English, SG.

3. Grade 12 Mathematics HG at least 60% (C Symbol).
4. Grade 12 Science HG at least 60% (C Symbol).
5. Grade 12 Biology HG at least 60% (C Symbol). Biology may be substituted with Grade 12 Physiology HG at least 60% (C Symbol).
6. Six (6) subjects will be considered.

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
31	5	5	Not accepted	5	5

Selection criteria

The Department of Optometry at the University of Johannesburg admits a limited number of students per academic year in line with the enrolment target of the University. The decision to limit numbers is based on available facilities in the Optometry Department, number of students qualifying nationally from other academic institutions as well as compliance with the rules and regulations of the Professional Board of Optometry and Dispensing Opticians. For these reasons, and the high academic demand of the course it is necessary to apply an academic selection process. The selection process targets the most successful students for this course.

Selection is based purely on academic results. Please read together with **HS9.1.3** regarding rules of access. Selection is done by the Student Enrolment Centre (SEC).

Provisional acceptance is based on Grade 11 final marks. Students must however attain the minimum requirements as in **HS9.1.3** in order to maintain their selection.

Students applying from other Higher Education Institutions and students with other degrees will also be considered. The selection is based on academic performance and an average of 65% for all modules passed is required for consideration. Students applying from other Higher Education Institutions should be in good standing with that Institution and comply with the minimum requirements of that of a Grade 12 applicant. Selection takes place based on first semester academic results. If students do not maintain similar academic performance, selection will be forfeited.

The Department reserves the right to admit a student that may not meet the stipulated requirements as set out. Furthermore, admission is at the discretion of the Department.

As soon as selection and provisional acceptance are completed, students will be notified by the Student Enrolment Centre. Students that are not accepted will be referred to their second choices indicated on the application form.

Decisions taken are final and no exceptions will be made. No late applications will be

considered.

HS9.1.4 Pass requirements

1. The Academic Rules and Regulations of the University of Johannesburg should be read in conjunction with the additional requirements for the program in particular **AR5.11.1** and **AR5.11.4**.
2. Class attendance is guided by **AR5.11.1** which states that "Students are expected to attend each class unless they have a legitimate reason, and where appropriate, the necessary evidence thereof, for being absent. **AR5.11.4** states that "Students are expected to attend a minimum of 80% of tutorials.
3. In order to continue to the second academic year in Optometry, a student must pass all the prescribed modules for the first academic year of study.
4. Students repeating part of the second year, but with credits in Optometry 1 and Dispensing Optometry 1 theory must still attend all practical sessions in these subjects in order to retain their credits. Students repeating part of the third year, but with credits in Optometry 2 and Dispensing Optometry 2 theory, must attend all practical sessions in these subjects in order to retain their credits.
5. Diagnostic Drug Proficiency: All fourth year students in Optometry have to prove their competency in the practical administration of diagnostic drugs and the use of related diagnostic instruments. The required pass mark in this proficiency examination is 75%.
6. Clinical rotations to community clinics, public hospitals and the primary healthcare train (Phelophepa) are compulsory.
7. All modules must be completed successfully, number of patients and clinic hours as prescribed by the Professional Board of Optometry and Dispensing Opticians completed and a research project report submitted, in order to successfully complete the program.
8. The maximum time to complete the Bachelor in Optometry degree is 6 years.
9. A possible fifth academic year may be required for therapeutics and/or community service. On graduating and after completing the required exit level outcomes for the degree, learners must apply to the HPCSA for full registration to practice as an Optometrist.

HS9.2 **MASTER OF HEALTH SCIENCES (OPTOMETRY) (M9OT1Q)**

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF Level 9, 180 Credits (HEQF aligned)

Research dissertation 100%

HS9.2.1 **Purpose**

The primary purpose of this qualification is to provide qualifying students with the ability to:

1. Perform independent scientific research with an original component.
2. Contribute to knowledge of and insight into optometry as well as the specific discipline of research.
3. Display skills in related research methodologies and in proper formulation through a Master's dissertation.
4. Only a Research Masters can be done.

HS9.2.2 **Outcomes**

The students will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Report research findings at the appropriate level.
6. Make conclusions, suggestions and recommendations based on the data collected that are reasonable and justifiable.

HS9.2.3 **Rules of access and admission requirements**

A Bachelor's degree in Optometry (or equivalent).

HS9.2.4 **Pass requirements**

Refer to the Academic Regulations of the University of Johannesburg.

HS9.2.5 **Curriculum**

A research dissertation on an approved topic:

Module name	Module code
Semester one	
Dissertation: Optometry Semester 1	DOT9XA1
Semester two	
Dissertation: Optometry Semester 2	DOT9XB1

HS9.3 PhD HEALTH SCIENCES: OPTOMETRY (P9HS4Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF Level 10, 360 Credits

Research thesis 100%

HS9.3.1 Purpose

The primary purpose of this qualification is to provide qualifying students with the ability to:

1. Perform independent, original and creative scientific research.
2. Contribute significant knowledge to and insight into optometry as well as the specific discipline of research.
3. Display skills in related research methodologies and in proper formulation through a doctoral dissertation.
4. Reflect upon decision-making, self-directedness and contributions to optometric science.
5. Only a Research Doctorate can be done.

HS9.3.2 Outcomes

The student will be able to:

1. Identify and/or create an original research problem.
2. Design, construct and execute a research project at the highest level.
3. Collect appropriate data in a precise and logical manner and evaluate and judge the information obtained.
4. Acquire learning abilities in the research context including the assessment of scientific literature, construction of a research project, execution of project, analysis of data and producing sound scientific arguments.
5. Make relevant conclusions based on the data collected that are reasonable and justified.

HS9.3.3 Rules of access and admission requirements

A relevant Master's degree.

Refer to the Academic Regulations of the University of Johannesburg.

HS9.3.4 Pass requirements

1. In conjunction with the research supervisor/s, the Department of Optometry Research Committee shall appoint for each thesis three examiners, who shall be responsible for external examination.
2. A minimum of one of the external examiners shall be based external to the country.

HS9.3.5 Curriculum

1. A student for a Doctoral degree shall be required to pursue an approved programme of research on some subject falling within the scope of the studies represented in the Department of Optometry.
2. Such programme shall make a distinct contribution to the knowledge or understanding of the subject and afford evidence of originality shown either by the discovery of new facts and/or by the exercise of independent critical power.

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Optometry)	RPO10X1
Semester two	
Research Project and Thesis: Health Sciences (Optometry)	RPO10X2

HS10.0 DEPARTMENT OF PODIATRY

HS10.1 BACHELOR OF HEALTH SCIENCES IN PODIATRY (B9P01Q)

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS10.1.1 Purpose

The purpose of the qualification is to produce professional podiatry graduates competent in the knowledge and skills required for managing and providing an integrated, holistic scientifically based podiatric health care service to all sectors of society. The qualification develops reflective, caring practitioners capable of integrating principles, theory, proven techniques, and relevant clinical skills in the delivery of a service focusing on promotion of foot health, prevention, diagnosis, treatment and rehabilitation of foot and lower limb related problems. Skills developed in scientific enquiry, critical thinking and problem-solving enable graduates to conduct research, undertake further study and become life-long learners. Graduates register with the HPCSA entitling them to practice independently and within a multidisciplinary team in the private or public health sector or in education, research, occupational health, and corporate sector.

HS10.1.2 Outcomes

ELO 1 Demonstrate competency in the performance of routine and specialised podiatric skills and techniques to clinically assess, diagnose, treat and manage conditions and/or pathologies affecting the foot and lower limb.

ELO 2 Apply the principles, proven techniques and specialised skills required for the delivery and promotion of foot health and the prevention and rehabilitation of the foot and lower limb problems.

ELO 3 Recognise and appraise the signs and symptoms of systemic conditions that impact on the foot and lower limb for the purpose of treatment, referral and subsequent management.

ELO 4 Manage a clinical practice and deliver evidence based podiatric services within the public or private healthcare environment effectively, demonstrating professionalism and an entrepreneurial ability.

ELO 5 Demonstrate the application of pertinent knowledge of the psycho-social, biological and basic sciences to podiatric practice.

ELO 6 Apply knowledge of Health and Safety regulations; Code/s of Practice; Ethics; Human Rights and Medical Law in the optimal performance of podiatric practice.

ELO 7 Develop research skills and conduct research within a podiatric context in order to contribute to the development of the profession, continue with lifelong learning and become a reflective practitioner.

HS10.1.3 Rules of access and admission requirements

A Senior Certificate with Matriculation exemption, or an equivalent qualification at an equivalent standard as determined by a Status Committee, with the following:

1. English with at least a Higher Grade D or Standard Grade C symbol and,
2. Two of the following compulsory subjects:
 - 2.1 Biology with at least a Higher Grade D or Standard Grade C symbol.
 - 2.2 Physical Science with at least a Higher Grade D or Standard Grade C symbol.
 - 2.3 Mathematics with at least a Higher Grade D or Standard Grade C symbol.

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy	Physical Sciences	Life Sciences
28	5	4	Not accepted	4	4

HS10.1.4 Specific rules and regulations for Podiatry students

1. Students must familiarize themselves with the internal rules and regulations of the Department. These rules and regulations, are set out in the Department's Clinical Conduct Guidelines, are binding.
2. The programme is not offered as a part time or distance- learning programme. Students who are in full time employment will be unable to continue with their studies.
3. All students (even if not registered for Clinical Practice within that academic year) are required to see a minimum number of patients each year as determined by the department whilst they are registered. This is a requirement to ensure that clinical competencies are retained.
4. Final (4th) year students who fail any module or fail to complete their research project are required to register for Clinical Practice Practical module the following year even if they have passed this module to ensure that clinical competencies are retained as per HPCSA requirements.
5. All registered students are required to attend clinics as rostered and must provide reasons in writing for non-attendance of clinics. If a student fails to attend a rostered clinic, he/she must plan with the year coordinator for make-up clinic shift.
6. Students are required to adhere to the requirements of the department relating to personal appearance and dress code during clinics.

Clinical practice (Work integrated learning)

1. Students must, by the end of each year, complete the clinical hour requirements which are detailed in the Clinical Practice Practical 1, 2, 3 and 4 Learner Guides.
2. Clinical practice practical/placement is integrated into the academic programme and developed in conjunction with the mutual assistance of clinical training partners, for this reason, clinical rosters cannot be personalized.
3. Attendance of all rostered clinics, clinical workshops and practicals is compulsory and failure to comply will lead to disciplinary action.
4. During the four-year of study, students must perform clinical work in the University of Johannesburg Podiatry clinic and at other clinical training sites around Gauteng.

HS10.1.5 Pass requirements

1. Students are promoted:
 - 1.1 To full second-year status if they have passed all the first-year modules.
 - 1.2 To full third-year status if they have passed all the second-year modules.
 - 1.3 To the fourth year of study if they have passed all third-year modules.
2. Clinical Practice modules credits are retained provided that both the theory and practical modules are passed during the same academic year. Students who fail either the theory or the practical component of Clinical Practice cannot retain credits for the passed component and will be required to re-register for both the theory and practical modules the following year. Students retain credits for all other modules passed.
3. Due to the integrated nature of the theory and practical modules, 80% attendances of all theoretical classes are mandatory. Students will have to provide reasons in writing for non-attendance of classes.
4. Students may register for a module in the following year, provided that:
 - 4.1 The prerequisite modules were passed.
 - 4.2 The module selection does not lead to timetable clashes.
 - 4.3 The module is not a clinical/practical module.
5. In order to gain re-admission to the programme first year students must pass a minimum of 60% (i.e., 5 of the 7) of first year modules.
6. Students may not register for the same module for a third time without permission from the Head of Department and Executive Dean.
7. 100% attendance of and participation in, the practical and experiential components are compulsory. If students fail to comply with this requirement, they will fail the practical.
8. Students have a maximum of 6 years to complete the four-year degree.

-----------------------------------	---------	---------

HS10.2 MASTER OF HEALTH SCIENCES: PODIATRY (M9PD1Q)

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF level 9

Research dissertation 100%

HS10.2.1 Purpose

The primary purpose of this qualification is to provide qualifying students with the ability to:

1. Perform independent scientific research with an original component.
2. Contribute to knowledge of and insight into podiatry as well as the specific discipline of research.
3. Display skills in related research methodologies and in proper formulation through a Master's dissertation.
4. Reflect upon decision-making, self-directedness and contributions to podiatric science.

HS10.2.2 Outcomes

The student will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Report research findings at the appropriate level.
6. Make conclusions, suggestions and recommendations based on the data collected that are reasonable and justifiable.

HS10.2.3 Rules of access and admission requirements

A Bachelor's degree in Podiatry or an equivalent qualification in Podiatry at an equivalent standard as determined by a Status Committee and approved by the Faculty Board.

Applicants should be registered with the HPCSA as a Podiatrist and have at least a minimum of one-year clinical experience.

The Department require a two-page synopsis of the research topic and methodology before the student is allowed to register or commence with his/her Master's studies.

Selection criteria

Selection will be based on:

- Consideration of a draft proposal by the Department's Research Committee.
- Prior academic performance
- Structured personal interview

HS10.2.4 Pass requirements

Pass mark of 50% for the dissertation.

HS10.2.5 Curriculum

A research project and a dissertation: The research component is 100%.

Module name	Module code
Semester one	
Research Project and Dissertation: Health Sciences (Podiatry)	DPD9XA1
Semester two	
Research Project and Dissertation: Health Sciences (Podiatry)	DPD9XB1

HS10.3 PhD HEALTH SCIENCES: PODIATRY (P9HS5Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF level 10, 360 Credits

Research thesis 100%

HS10.3.1 Purpose

To develop podiatry graduates that can make original contribution to podiatry knowledge and healthcare in general through conducting and disseminating high quality novel research to support and enhance the evidence-base for podiatry.

HS10.3.2 Outcomes

On completion of this qualification, the graduate should be able to demonstrate:

1. broad knowledge and systematic understanding of research as well as advanced and up-to-date specialised knowledge in podiatry,
2. familiarity with research methodology in general and the methods of podiatric and healthcare research in particular,
3. the capacity for scholarly analysis and synthesis as well as an ability to review and assess new and complex phenomena, issues and situations independently and critically,
4. intellectual autonomy and disciplinary integrity as well as the ability to make assessments of research ethics,
5. the ability to identify and formulate research problem with scholarly precision critically, independently, and innovatively, and to plan and use appropriate methods to undertake original research,
6. through a dissertation the ability to make a significant contribution to the production of knowledge through his or her own research,
7. the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general,
8. the ability to identify the need for further knowledge,
9. specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and
10. the capacity to contribute to social development and support the learning of others both through research and education and in professional capacity.

HS10.3.3 Rules of access and admission requirements

Selection criteria

1. A Master's degree in Podiatry or an equivalent qualification with a minimum of 65% for the dissertation.
2. A minimum of three years clinical experience.
3. Candidates will be required to submit an outline research proposal.
4. Selection process is based on consideration of the research proposal for the PhD, the availability of a suitable supervisor, and an evaluation of the theoretical and methodological expertise required to complete the study.

HS10.3.4 Pass requirements

Pass mark of 50% for the thesis.

HS10.3.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Podiatry)	RPP10X1
Semester two	
Research Project and Thesis: Health Sciences (Podiatry)	RPP10X2

HS11.0 DEPARTMENT OF SPORT AND MOVEMENT STUDIES

HS11.1 HIGHER CERTIFICATE IN SPORT ADMINISTRATION (F9SA1Q)

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

NQF Level: 5, 120 Credits

HS11.1.1 Purpose

The purpose of the Higher Certificate in Sport Administration is to provide learners with knowledge, skills and competencies to ensure professional, ethical and effective administration of sport clubs and events. This will be ensured through education and training in the principles of club administration, facility, competition and event administration, marketing, human resources, financial, and coaching administration.

HS11.1.2 Outcomes

Students should be able to:

1. Develop a personal philosophy, vision and code of conduct for the administration of sport clubs.
2. Demonstrate knowledge, skills and competencies in the administration of the human resources, finances, marketing and legal aspects of sport clubs.
3. Demonstrate knowledge, skills and competencies in the administration of sport facilities that includes turf administration, maintenance, scheduling and booking, equipment and risk administration.
4. Apply knowledge, skills and competencies in the administration of sport events and competitions, including for people with disability.
5. Develop leadership skills and competencies within a framework of ethical behaviour.

HS11.1.3 Rules of access and admission requirements

A National Senior Certificate (Grade 12) or equivalent qualification or relevant experience in the sport industry as determined by the RPL committee and in line with the UJ's RPL policy. Proficiency in English.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and learning (English)	Subject 1	Subject 2	Subject 3
18	3	3	3	3

**National certificate endorsement*

Selection criteria

The Department of Sport and Movement Studies base selection on academic merit and availability of places in the programme.

HS11.1.4 Pass requirements

Students are promoted:

1. When all modules are passed with a final mark of 50% and higher.
2. Students retain credit for all modules passed.
3. Students must re-apply for continuation of their studies if they failed to pass an accumulative total of modules of at least:
 - 3.1 Three (3) modules after the first semester of study.
 - 3.2 Seven (7) Modules after the first year of study.
4. Work integrated learning: Students must accumulate 150 hours of approved practical work over the year.
5. First Aid Level 1: Students must complete the First Aid Level 1 course at a Departmental approved service provider.

HS11.1.5 Curriculum

First year		
Module Name	Module code	Prerequisite code
Semester one		
Communication and Computer Literacy	CCLSAA1	See admission requirements.
Human Resource Administration in a Sport Club	HRASAA1	
Introduction to Sport Marketing and Administration	IMASAA1	
Principles and Administration of Coaching	PACSAA1	
Self-Management and Personal Skills Development	SMDSAA1	
Semester two		
First Aid Level 1	FALSAB1	
Financial Administration in Sport	FASSAB1	
Introduction to Sport Law	ISLSAB1	
People with Disability in Sport	PDSSAB1	
Sport Leadership and Ethics	SLESAB1	
Year Modules		
Facility, Competition and Event Administration	FCESAY1	
Sport and Club Administration	SCASAY1	
Work integrated learning (WIL)	WILSAY1	

HS11.2 **HIGHER CERTIFICATE SPORT COACHING AND EXERCISE SCIENCES (F9SC2Q)**

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

NQF Level: 5, 120 Credits

HS11.2.1 Purpose

The purpose of the Higher Certificate in Sport Coaching and Exercise Science is to provide students with knowledge and competencies to ensure that athletes are coached within a holistic framework of athlete development of the four domains for coaching (children, participation for adolescents and adults, emerging and talented athletes and high-performance athletes). This will be ensured through the principles of coaching science, the knowledge of human sport performance, exercise physiology, developing the skills to identify common sports injuries and personal development.

HS11.2.2 Outcomes

Students should be able to:

1. Develop a personal coaching philosophy, vision and code of conduct.
2. Design and conduct basic fitness training protocols within the four domains of coaching.
3. Acquire the knowledge and skills to prevent common sport related injuries during coaching.
4. Identify key legal aspects and risks factors within the coaching and sport context.
5. Debate the key requirements for starting a sport club.
6. Develop a basic knowledge and understanding of sport facility and event management principles.

HS11.2.3 Rules of access and admission requirements

A National Senior Certificate (Grade 12) or equivalent qualification or relevant experience in the sport industry as determined by the RPL committee and in line with the UJ's RPL policy. Proficiency in English.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and learning (English)	Subject 1	Subject 2	Subject 3
18	3	3	3	3

**National certificate endorsement*

Selection criteria

The Department of Sport and Movement Studies base selection on academic merit and availability of places in the programme.

HS11.2.4 Pass requirements

Students are promoted:

1. When all modules are passed with a final mark of 50% and higher.
2. Students retain credit for all modules passed.
3. Students must re-apply for continuation of their studies if they failed to pass an accumulative total of modules of at least:
 - 3.1 Three (3) modules after the first semester of study.
 - 3.2 Seven (7) modules after the first year of study.
4. Work integrated learning: Students must accumulate 100 hours of approved practical work over the year.
5. First Aid Level 1: Students must complete the First Aid Level 1 course at a Departmental approved service provider.

HS11.2.5 Curriculum

First year		
Module Name	Module code	Prerequisite code
Semester one		
Basic Injury Prevention	BIPSCA1	See admission requirements.
Communication and Computer Literacy	CCLSCA1	
Sport Club Administration	SCASCA1	
Self-Management and Personal Skills Development	SMDSAA1	
Semester two		
Basic Coaching Science	BCSSCB1	
First Aid Level 1	FALSAB1	
Introduction to Sport Law	ISLSAB1	
People with Disability in Sport	PDSSAB1	
Sport Leadership and Ethics	SLESAB1	
Year Modules		
Basic Anatomy and Physiology	BAPSCY1	
Coaching in the Four Domains	CFDSCY1	
Facility, Competition and Event Management	FCESAY1	
Work Integrated Learning (WIL)	WILSCY1	

HS11.3 DIPLOMA IN SPORT MANAGEMENT (D9S01Q)
Duration of programme
Full-time: Minimum 3 years and Maximum 5 years
NQF Level 6, 360 Credits

HS11.3.1 Purpose

Students will acquire knowledge and practical competencies in the administration and management of small sport enterprises as well as to reflect on their decisions made. More specifically, they will obtain those competencies in the functional aspects of management.

HS11.3.2 Outcomes

1. Students should be able to implement the functional management competencies in order to manage a small sport enterprise.
2. Students should be able to organise a sport club event utilizing the principles of event management.
3. Students should be able to do the administration of a small sport enterprise.
4. Students should be able to plan and implement a marketing plan for an event or small sport enterprise.

HS11.3.3 Rules of access and admission requirements

An FETC, Senior Certificate or an equivalent qualification at NQF 4 as determined by a Status Committee, with the following subjects:

1. Compulsory subject English with at least a Higher Grade E or Standard Grade D symbol.
2. Students who have successfully completed the Higher Certificate in Sport Administration or the Higher Certificate in Sport Coaching and Exercise Science may also be eligible for admission into the Diploma in Sport Management, dependent on merit and space availability in the programme.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and	Mathematics	Mathematical Literacy	Life Sciences	Physical Sciences
21 with Mathematics 22 with Mathematical Literacy	3	3	4	Not applicable	Not applicable

Selection criteria

The Department of Sport and Movement Studies base selection on academic merit and availability of places in the programme.

HS11.3.4 Pass requirements

Students are promoted:

1. To the second year of study if they have passed at least 2 modules (from either

Sport Management 1A and B; or Business Management 1A and B), plus 2 other modules; to the third year of study if they have passed at least 10 modules, including Sport Management 2 and Business management 2.

2. Students must take all outstanding modules of the previous year of study before they may take modules of the following year of study, limited to a maximum of 6 modules in any one year of study.
3. Students retain credit for all modules passed.
4. Students must re-apply for continuation of their studies if they failed to pass an accumulative total of modules of at least:
 - 4.1. 3 modules after the first semester of study (one must be Sport Management 1A or Business Management 1A).
 - 4.2. 7 modules after the first year of study.
 - 4.3. 12 Modules after the second year of study.
 - 4.4. 18 Modules after the third year of study.

HS11.3.5 Curriculum

HS11.4 BACHELOR OF COMMERCE IN SPORT MANAGEMENT (B9S14Q)

Duration of programme

Full-time: Minimum 3 years and Maximum 5 years

NQF Level 7, 360 Credits

HS11.4.1 Purpose

The student should develop applied competencies in the mastering, analysis, interpretation and application of management principles in the fitness and health, coaching, teaching and retailing sectors of the sport industry.

HS11.4.2 Outcome

Students will develop the ability to internalize, reflect on, and communicate strategic decisions and applications effectively through the correct and suitable use of scientific language and technical terminology associated with sport management. The qualification will facilitate effective learning through exposure to, and the application of, appropriate learning styles, thereby enabling them to navigate and holistically manage the dynamic context of sport management.

HS11.4.3 Rules of access

A Senior Certificate, or an equivalent qualification at an equivalent standard as determined by a Status Committee.

A National Senior Certificate (NSC) - APS Score with minimum requirements as shown below:

(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and Learning (English)	Mathematics	Mathematical Literacy or Technical Mathematics	Physical Sciences	Life Sciences
23	4	4	Not accepted	Not applicable	Not applicable

**Mathematics (HG) must be minimum D (50%+) or Mathematics (SG) must be minimum C (60%+)*

HS11.4.4 Pass Requirements

To be admitted to any module in the second or third academic year of study, and progress to the following year of study, students must have passed at least 60% of the modules in the previous year of studies.

HS11.5 BACHELOR OF HEALTH SCIENCES IN SPORT AND EXERCISE SCIENCES (B9SE1Q)

Duration programme

Full-time: Minimum 3 years and Maximum 5 years

NQF Level 7, 360 Credits

HS11.5.1 Purpose

The purpose of this qualification is to develop competent sport and exercise scientists to ensure that the identification, development and performance of athletes are carried out professionally, effectively with a scientific background and an ethical approach.

HS11.5.2 Outcomes

This will be ensured by applying the principles, knowledge and skills of sport and exercise science, which will be assessed against the set outcomes of the programme. These graduates will fill an important gap in the fitness industry and health promotion needs of the community, especially as statistics indicate the prevalence of non-communicable diseases faced in South Africa and will further play a pivotal role in coaching science, hence the enhancement of sport performance in South Africa.

HS11.5.3 Rules of access and admission requirements

A Senior Certificate, or an equivalent qualification at an equivalent standard as determined by a Status Committee.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and learning (English)	Mathematics	Mathematical Literacy	Life Sciences	Technical Mathematics	Technical Science
27 with Mathematics 28 with Mathematical Literacy	5	3	4	4	4	4

HS11.5.4 Pass requirements

To be admitted to any module in the second academic year of study, and progress to the following year of study, students must have passed at least 60% of the modules in the previous year of studies.

HS11.6 **BACHELOR OF BIOKINETICS (B9S15Q)**

Duration of programme

Full-time: Minimum 4 years and Maximum 6 years

NQF Level 8, 480 Credits

HS11.6.1 **Purpose**

The qualification serves as the foundational and core knowledge base to register as a Biokineticist with the Health Professions Council of South Africa (HPCSA). The acquisition of professional abilities such as competence, skills, values and attitudes is fostered to enable the graduate to work as a health care professional. Competent and qualified Biokineticists are able to work in a variety of settings, including the public and private sector and in both urban and rural settings. Biokineticists primarily utilise their professional expertise in exercise testing and prescription, physical activity and health education to enhance/promote health in general, and to prevent dysfunction, restore and maintain an individual's functional ability, particularly in respect of orthopaedic injuries and chronic diseases/conditions.

The qualification will provide all economic sectors with a pool of well-qualified people whose competence will be internationally recognised and who will be able to perform specialised biokinetic health care services within any community setting.

The qualification is distinct from other qualifications within the health care profession as its main focus is the use of scientifically-based exercise prescription as a means of therapeutic intervention.

HS11.6.2 Outcome

Competent Biokineticists are able to:

1. Demonstrate knowledge, competence, skills and attitudes related to the structure and function of the human body systems.
2. Demonstrate knowledge, competence, skills and attitudes related to the psychosocial aspects of health and human performance.
3. Demonstrate knowledge, competence, skills and attitudes related to biomechanics.
4. Demonstrate knowledge, competence, skills and attitudes related to exercise physiology and clinical exercise physiology for rehabilitation.
5. Demonstrate specialised knowledge, competence, skills and attitudes related to human motor behaviour.
6. Demonstrate adequate knowledge, competence, skills and attitudes related to exercise science.
7. Plan and implement effective and efficient therapeutic and recreation programmes.
8. Apply specialised knowledge, competence, skills and attitudes related to health promotion, health education and health related aspects of exercise and physical activity in individual, community and work context.
9. Apply relevant and appropriate knowledge, competence, skills and attitudes related to the prevention and rehabilitation of musco-skeletal injuries.
10. Apply relevant knowledge, competence, skills and attitudes in conducting scientific measurement and evaluation in biokinetic contexts.
11. Apply relevant knowledge, competence, skills and attitudes to the management of chronic diseases and disabilities.
12. Demonstrate competence of the research process and various methodologies as well as apply the relevant knowledge, skills and attitudes in conducting a research project on a biokinetics or related topic.
13. Manage a private or public biokinetics practice or health care facility.

HS11.6.3 Rules of access

A Senior Certificate with university exemption, or an equivalent qualification as determined by a Status Committee. Life Sciences, although not compulsory, is highly recommended for entrance into the degree.

A National Senior Certificate - APS Score with minimum requirements as shown below:

Life Sciences, although not compulsory, is highly recommended for entrance into the degree.

A National Senior Certificate - APS Score with minimum requirements as shown below:
(Exclude Life Orientation when calculating APS)

Minimum APS	Language of teaching and	Mathematics	Mathematical Literacy	Life Sciences	Physical Sciences
31 with Mathematics 32 with Mathematical Literacy	5	4	5	Not applicable	Not applicable

Selection criteria

NB: All students accessing this qualification are required to register with the Health

Professions Council of South Africa (HPCSA) for the duration of the study period. In addition to the above, numbers for this programme will be capped and thus the applicants will be selected based on their APS scores.

HS11.6.4 Pass Requirements

To be promoted to the following year of study, students must have passed 100% of the modules in the previous year of study and to proceed with studies, students need to pass at least 60% of the modules in the previous year of study.

HS11.7 **BACHELOR OF COMMERCE HONOURS IN SPORT MANAGEMENT (H9S05Q)**

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

NQF Level 8, 120 Credits

HS11.7.1 **Purpose**

The student should develop applied competencies in the mastering, analysis, interpretation and application of management principles in the fitness and health, coaching, teaching and retailing sectors of the sport industry. The students should be able to reflect on their managerial decisions and applications to assess the effect thereof in the holistic context of sport management as practice.

HS11.7.2 **Outcome**

Students should be able to:

1. Resolve typical problems that exist in the management of sport environments.
2. Plan, implement and analyse research in a sport environment.
3. Apply different learning strategies in the study of sport and related competencies.
4. Apply strategic planning competencies.
5. Execute financial planning, control and analysis.
6. Manage the human resources of a sport environment/organization.
7. Plan, execute and evaluate a sport event(s).

HS11.7.3 Rules of access

A potential student should be in possession of a BCom (Sport Management) or any related qualification which majors in sport management with a program specific minimum level of competency on the NQF Level 7 generating 360 credits (with an overall minimum average of 60% in the third year). Applications for admission are considered by a Departmental selection committee and a limited number is admitted every year. The limited number of students admitted is based on the Department's capacity to adequately expose the students to Work Integrated Learning (WIL) and student to supervisor ratios.

HS11.8 BACHELOR OF ARTS HONOURS IN SPORT SCIENCE (H9S03Q)**Duration of programme****Full-time: Minimum 1 year and Maximum 2 years****NQF Level 8, 120 Credits****HS11.8.1 Purpose**

The student should develop applied competence in the analysis, interpretation and application of sport science principles in the fitness and health, coaching and teaching sectors of the sport industry. The student should be able to take strategic decisions in the context of sport science and to assess any internal or external decision impacting on sport science. The student should further be able to reflect on his/her scientific decisions and applications to assess the effect thereof in the holistic context of sport science as practice.

HS11.8.2 Outcome

Students will develop the ability to internalize, reflect on and communicate related Sport Science principles in the fitness and health, coaching and teaching sectors of the Sport industry. The student should further be able to reflect on his/her scientific decisions and applications to assess the effect thereof in the holistic context of sport science as practice.

HS11.8.3 Rules of access

Access will be provided to a student who is in possession of a BCom (Sport Management) or sport related BA (Sport Science or Human Movement Studies) degree generating a minimum of 360 credits (with an overall minimum average of 60% in the third year). Applications for admission are considered by a Departmental selection committee.

HS11.9 MASTER OF PHILOSOPHY IN BIOKINETICS (M9S03Q)

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF Level 9, 180 Credits

Research dissertation 100%

HS11.9.1 Purpose

1. Perform independent scientific research with an original component.
2. Contribute to knowledge of and insight into Biokinetics as well as the specific discipline of research.
3. Display skills in related research methodologies and in proper formulation through a Master's dissertation.
4. Reflect upon decision-making, self-directedness and contributions to Biokinetics industry and practice.

HS11.9.2 Outcome

Students will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Make conclusions, suggestions and recommendations based on the data collected that are logical and justifiable.
6. Produce one article for peer-reviewed publication.

HS11.9.3 Rules of access

Access will be provided to the student who is in possession of an NQF Level 8 qualification in Biokinetics (with an average pass mark of at least 65%) according to the Faculty Rules and Regulations.

Selection criteria

Selection is based on academic merit, and an interview (if required).

HS11.9.4 Curriculum

A dissertation on an approved topic. Refer to the Academic Regulations booklet for applicable regulations on masters' qualifications.

Module name	Module codes
Semester one	
Dissertation: Biokinetics	HMS9X03
Semester two	
Dissertation: Biokinetics	HMS9X04

HS11.9.5 Closing date for applications

The closing date for applications is 31 October each year.

HS11.10 MASTER OF COMMERCE / MASTER OF PHILOSOPHY IN SPORT MANAGEMENT (M9S02Q) / (M9S04Q)

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF Level 9, 180 Credits

Research dissertation 100%

HS11.10.1 Purpose

Through the masters' dissertation a qualifying student would show evidence of independent and original scientific work. The dissertation would constitute a decided contribution to knowledge of and insight into the subject discipline as well as the field of research. Qualifying students would also display competence in the application of related research methodology, and the proper written and/or oral communication of the research process and findings. The student should be able to reflect on his/her research decisions and applications to assess the effect thereof in the holistic context of the sport industry.

HS11.10.2 Outcome

Students will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Make conclusions, suggestions and recommendations based on the data collected that are logical and justifiable.
6. Produce one article for peer-reviewed publication.
7. Present the findings at a national forum.

HS11.10.3 Rules of access

Access will be provided to the student who is in possession of an Honours qualification in Sport Management (with an average pass mark of at least 65%). In the case of an interdisciplinary or interdisciplinary master's programmes (MPhil), additional admission requirements may be set by the two or more relevant interdisciplinary fields/departments/faculties and contained in the relevant Faculty Rules and Regulations.

HS11.10.4 Curriculum

A dissertation on an approved topic. Refer to the Academic Regulations booklet for applicable regulations on masters' qualifications.

Module name	Module code
Semester one	
Dissertation: Sport Management (MCom)	HMS9X01
Dissertation: Sport Management (MPhil)	HMS9X05
Semester two	
Dissertation: Sport Management (MCom)	HMS9X02
Dissertation: Sport Management (MPhil)	HMS9X06

HS11.10.5 Closing date for applications

The closing date for applications is 31 October each year.

HS11.11 **MASTER OF PHILOSOPHY IN SPORT SCIENCE (M9S06Q)**

Duration of programme

Full-time: Minimum 1 year and Maximum 2 years

Part-time: Minimum 1 year and Maximum 3 years

NQF Level 9, 180 Credits

Research dissertation 100%

HS11.11.1 Purpose

Through the master's dissertation in which the qualification finally culminates, a qualifying student would show evidence of independent and original scientific work. The dissertation would constitute a decided contribution to knowledge of and insight into the subject discipline as well as the field of research. Qualifying students would also display competence in the application of related research methodology, and the proper written and/or oral communication of the research process and findings. The student should be able to reflect on his/her research decisions and applications to assess the effect thereof in the holistic context of the sport science industry.

HS11.11.2 Outcome

Students will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Make conclusions, suggestions and recommendations based on the data collected that are logical and justifiable.
6. Produce one article for peer-reviewed publication.
7. Present the findings at a national forum.

HS11.11.3 Rules of access

Access will be provided to the student who is in possession of an honours qualification in Sport Science (with an average pass mark of at least 65%) according to the Faculty Rules and Regulations.

HS11.11.4 Curriculum

A dissertation on an approved topic. Refer to the Academic Regulations booklet for applicable regulations on masters' qualifications.

Module name	Module code
Semester one	
Dissertation: Sport Science	HMS9X07
Semester two	
Dissertation: Sport Science	HMS9X08

HS11.11.5 Closing date for applications

The closing date for applications is 31 October each year.

HS11.12 PhD HEALTH SCIENCES: BIOKINETICS (P9H12Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF Level 10, 360 Credits

Research thesis 100%

HS11.12.1 Purpose

The primary purpose of this qualification is to provide qualifying students with the ability to:

1. Perform independent original and creative scientific research.
2. Contribute significant knowledge to and insight into Biokinetics as well as the specific discipline of research.
3. Display skills in related research methodologies and in proper formulation through a doctoral thesis.
4. Reflect upon decision-making, self-directedness and contributions to the Biokinetics profession.

HS11.12.2 Outcome

Students will be able to:

1. Identify and/or create an original research problem.
2. Design, construct and execute research at this level.
3. Collect appropriate data in a precise and logical manner and evaluate and judge the information obtained.
4. Acquire learning abilities in the research context including the assessment of scientific literature, construction of a research project, execution of the project, analysis of the data and producing sound scientific arguments.
5. Make relevant conclusions based on the data collected that are logical and justified.

6. Produce two articles for peer-reviewed publication.

HS11.12.3 Rules of access

Access will be provided to the student who is in possession of a masters' qualification in Biokinetics (with an average pass mark of at least 65%) with a programme specific minimum level of competency on NQF Level 9, generating a minimum of 180 credits.

Selection criteria

Selection is based on academic merit, and an interview (if required).

HS11.12.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS11.12.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Biokinetics)	RPB10X1
Semester two	
Research Project and Thesis: Health Sciences (Biokinetics)	RPB10X2

HS11.12.6 Closing date for applications:

The closing date for applications is 31 October each year.

HS11.13 PhD HEALTH SCIENCES: SPORT SCIENCE (P9H11Q)

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF Level 10, 360 Credits

Research thesis 100%

HS11.13.1 Purpose

Through the doctoral thesis, in which the qualification finally culminates, a qualifying student would show evidence of independent and original scientific work. The thesis would constitute a decided contribution to knowledge of and insight into the subject discipline as well as the field of research. Qualifying students would display applied competence in research methodology, and the proper written and/or oral communication in the research process and findings. The student should be able to reflect on his/her research decisions and applications to assess the effect thereof in the holistic context of research in the sport industry.

HS11.13.2 Outcome

Students will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Make conclusions, suggestions and recommendations based on the data collected that are logical and justifiable.
6. Produce two articles for peer-reviewed publication.

HS11.13.3 Rules of access

Access will be provided to the student who is in possession of a masters' qualification in Sport Science (with an average pass mark of at least 65%) with a programme specific minimum level of competency on NQF Level 9, generating a minimum of 180 credits.

Selection criteria

Selection is based on academic merit, and an interview (if required).

HS11.13.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS11.13.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Sport Science)	RSS10X1
Semester two	
Research Project and Thesis: Health Sciences (Sport Science)	RSS10X2

HS11.13.6 Closing date for applications

The closing date for applications is 31 October each year.

HS11.14 **PHD HEALTH SCIENCES: SPORT MANAGEMENT (P9H17Q)**

Duration of programme

Full-time: Minimum 2 years and Maximum 4 years

Part-time: Minimum 2 years and Maximum 5 years

NQF Level 10, 360 Credits

Research thesis 100%

HS11.14.1 Purpose

Through the doctoral thesis, culminating in the qualification, a qualifying student would demonstrate independent and original scientific work. The thesis is expected to make a significant contribution to advancing knowledge and understanding within the field of sport management, encompassing fundamental principles, current practical issues, and the interdisciplinary aspects of sociological, cultural, historical, political, psychological, and legal concepts relevant to sport management. It should also address business and strategic considerations crucial to effective sport management practices. Additionally, the thesis should showcase the student's applied competence in research methodology and effective communication skills, both written and oral, in presenting research processes and findings. The student should critically reflect on their research decisions and applications, evaluating their impact within the broader context of research in the sport industry.

HS11.14.2 Outcome

Students will be able to:

1. Identify, formulate, prepare and solve research problems.
2. Execute the research project at the appropriate level.
3. Collect, organize, check, evaluate and write a proper literature review organizing the appropriate information in an understandable and logic manner.
4. Acquire learning abilities in the research context including the assessment of scientific literature, execution of research methodologies including the gathering of data and evaluating the information obtained.
5. Make conclusions, suggestions and recommendations based on the data collected that are logical and justifiable.
6. Produce two articles for peer-reviewed publication.

HS11.14.3 Rules of access

Access will be provided to the student who is in possession of a masters' qualification in Sport Management (with an average pass mark of at least 65%) with a programme specific minimum level of competency on NQF Level 9, generating a minimum of 180 credits.

Selection criteria

Selection is based on academic merit, and an interview (if required).

HS11.14.4 Pass requirements

Refer to the Academic Regulations of the University of Johannesburg.

HS11.14.5 Curriculum

A research thesis. The research component is 100%.

Module name	Module code
Semester one	
Research Project and Thesis: Health Sciences (Sport Management)	RSM10X1
Semester two	
Research Project and Thesis: Health Sciences (Sport Management)	RSM10X2

HS11.14.6 Closing date for applications:

The closing date for applications is 31 October each year.

HS12.0 MODULES PRESENTED BY THE FACULTY**HS12.1 DEPARTMENT OF BIOMEDICAL SCIENCES****BACHELOR OF HEALTH SCIENCES IN MEDICAL LABORATORY SCIENCES (B9B01Q)**

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcomes
Cell Biology 1	CLBHBB 1	50%	50%	6	12	The purpose of this module is to introduce the student to the basic structures and functions of cells, and biological molecules that make up living organisms. This course aims to familiarize the student with the basic structure and function of the different biochemical molecules and how the different levels of structure influence the function of the compounds. The metabolic pathways involved in the synthesis and breakdown of the different compounds will also be studied. The module will also give an outline of molecular biology, biochemistry of cancer, and applied biochemistry.	On successful completion of this module, students will be able to understand and describe: The biochemical perspective of medicine, cells, and the detailed structure, function, and properties of biomolecules. Importance of enzymes and enzyme kinetics in the biological system. Detailed major and minor metabolic pathways, their functions and regulation. Students will also have an in-depth understanding of the Etiology of cancer, the carcinogenesis process and the difference between normal and cancer cells, nucleotide's structure and chemistry, The structure of nucleic acids, replication, transcription and translation.
Chemistry 1A	CEMH1A 1	50%	50%	5	12	The purpose of this module is to develop the students understanding of	On successful completion of this module, students will be

						<p>chemical principles and techniques within general, organic chemistry and inorganic chemistry which will serve as a fundamental basis for the student's further development in the biological sciences. To develop the applied practical and laboratory skills of the students required in the Biomedical Technology field.</p>	<p>able to understand, apply, and perform:</p> <ul style="list-style-type: none"> • Basic chemistry • Atoms and molecules • Systems of classification • Chemical calculations • Chemistry of elements and water <p>Students will also be introduced to:</p> <ul style="list-style-type: none"> • Alkanes & Alkenes • Aromatic compounds • Alkanols and phenols • Alkyl and arylhalides • Alkanoates and Alkynes • Alkanals and alkanones • Alkanoic acids and Amines
Clinical Chemistry 2A	CLCHBA 2	50%	50%	6	12	<p>The purpose of this module is to introduce the student to the basic concepts of instrumentation and quality assurance used in the Clinical Chemistry laboratory. This module will further introduce the students to case study-based learning and prepare the student to apply their theoretical knowledge of normal and abnormal physiology to the recognition and diagnoses of diseases affecting the systems that will be covered. This module is not only relevant to the student's present academic programme but is also relevant to his/her future personal and professional life in Medical Technology.</p>	<p>On successful completion of this module, the student should be able to:</p> <p>Describe all test principles and methodologies used in Chemical Pathology. Make detailed sketches or line drawing of each of the above instruments, state the principles that govern the functioning of these instruments. Must be able to discuss the advantages and disadvantages of each technique and instruments used in a Clinical Chemistry laboratory. Calculation used in everyday laboratory preparations and procedures involving specific technique. Understand the process and purpose of Quality</p>

							control and Quality assurance. Apply the criteria for selecting and evaluating new methodology. Use the normal and abnormal physiology of the human water and electrolyte balance to diagnose diseases affecting this system. Use the information of the normal and abnormal physiology and maintenance of the acid base balance to diagnose and identify diseases that affects the acid base. Apply normal and abnormal physiology of the kidney and the hormonal control of its function to diagnose the diseases that affect the kidney. Understand the importance of proteins and their physiological functions and clinical utility of protein measurement
Clinical Chemistry 2B	CLCHBB 2	50%	50%	6	12	This module will further introduce the students to normal and abnormal physiology to the recognition and diagnoses of diseases affecting the systems that will be covered. This module is not only relevant to the student's present academic programme, but also involves the integration of other core modules relevant to future personal and professional life in Medical Laboratory Sciences.	On successful completion of this module, the student should be able to: Use their knowledge of enzyme tissue distribution to make differential diagnoses of the diseases. Use their knowledge of liver physiology, enzymology, and immunology to make a differential diagnoses of liver diseases Discuss the principal and applications of Immunochemical techniques used in chemical pathology (Self-study, repeat section).

							<p>Apply the base knowledge of hormones and their target organs in the diagnoses of hormonal based diseases</p> <p>Define of the main terminology used in pharmacology, as well as the target molecules for pharmaceuticals and their actions.</p> <p>Discuss the routes of administration, absorption, distribution, and excretion of pharmaceuticals.</p> <p>Define the symptoms and physiological changes caused by drugs of abuse and discuss the methods for testing.</p>
Clinical Chemistry 3	CLCHBA 3	50%	50%	7	12	<p>The purpose of this module is to introduce the student to the functions, diseases associated with carbohydrates, lipids, minerals and body fluids and the laboratory analysis thereof. laboratory. This module will further introduce the students to case study-based learning and prepare the student to apply their theoretical knowledge of normal and abnormal physiology to the recognition and diagnoses of diseases affecting the systems that will be covered.</p>	<p>On successful completion of this module, the student should be able to:</p> <p>Assess a patient's laboratory results and follow-up test, as well as theoretically administer some of the follow-up tests safely.</p> <p>Differentially diagnose the different types of lipid and lipoprotein disorders, and discuss the impact on the blood lipid levels</p> <p>Integrate their knowledge of physiology and macro and micro minerals to diagnose diseases that involves their balance in the body.</p> <p>Analyse the results of different body fluids to make patient management and diagnostic decisions</p>

							<p>Discuss the mechanism of action, indications, undesirable effects, pharmacokinetics, contraindications, and drug interactions of cardiovascular drugs.</p> <p>Decide for which disease the specific the lipid lowering agents, antibiotics/drugs of abuse and anticonvulsants will be indicated for by using their different mechanism of action of these pharmaceuticals</p>
Clinical Chemistry 4	CLCHBY 4	50%	50%	8	120	The purpose of this module is to provide students with the theoretical and practical knowledge to integrate information learned and apply it in diagnostic clinical chemistry.	On successful completion of this module, students will be able to apply and integrate information acquired from 2nd and 3rd year clinical chemistry modules to make final diagnosis in the science of clinical chemistry
Clinical Pathology 4	CNPHBY 4	50%	50%	8	120	The purpose of this module is to provide students with the theoretical and practical knowledge to be able to apply an integrated approach in diagnostic clinical pathology.	On successful completion of this module, students will be able to apply and integrate information acquired in medical microbiology, Clinical chemistry and haematology to make final diagnosis in the science of clinical pathology

Communication for Medical Laboratory Sciences 1A	CMLSBA 1	100%	0%	5	4	<p>This module is meant for:</p> <ul style="list-style-type: none"> - the development of effective writing and analytical skills. Understanding the communication process, - paragraph/ essay writing - Effective writing for various audiences, business, and thesis writing. - Effective verbal communication and non-verbal communication skills - Oral presentation, creation of a presentation, delivering and choice of effective presentation tools. Conflict management and resolution. 	<p>On successful completion of this module, students will be able to:</p> <p>Identify errors of style, punctuation, language content and layout.</p> <p>Evaluate, justify, and interpret the underlying meaning of a given text.</p> <p>Identify the components of communication.</p> <p>Correctly write structured paragraphs.</p> <p>Apply effective referencing techniques as suggested in academia.</p> <p>Skilfully create references for a book, journal, internet source and newspaper articles.</p> <p>Identify various language problems.</p> <p>Evaluate individual non-verbal communication.</p> <p>Deliver effective oral presentation</p>
Computer Skills	CSL01A 1	50%	50%	5	4	<p>The purpose of this module is to introduce the students to basic IT (Information Technology) terms, Microsoft Word and Microsoft PowerPoint skills, including the basic components of a computer.</p>	<p>On successful completion of this module, students will be able to:</p> <p>Use the Word Processing application to solve business problems</p> <p>Use presentation software</p> <p>Use Ms Excel to create spreadsheets</p> <p>Use Ms Access to create databases</p>
Cytogenetics 2	CTGHBB 2	50%	50%	6	12	<p>The purpose of this module is to introduce the student to the basic concepts of understanding normal</p>	<p>On successful completion of this module, students will be able to recognize, describe and discuss in detail the different</p>

						and abnormal chromosomes and will also include topics on hereditary and variation such as Mendelian genetics, non — Mendelian genetics and molecular genetics.	aspects of chromosomal structure, number, and behaviour, and their effects at the organismal, population and species levels.
Cytogenetics 4	CYTGBY 4	50%	50%	8	120	The purpose of this module is to provide students with the theoretical and practical knowledge to integrate information learned and apply it in diagnostic cytogenetics cases and molecular genetics.	On successful completion of this module, students will be able to apply and integrate information acquired to make final diagnosis in the science of cytogenetics.
Cytopathology 2	CTPHBB 2	50%	50%	6	12	<p>The purpose of this module is to provide students with the theoretical and practical knowledge to:</p> <p>Differentiate between changes seen in epithelial cells.</p> <p>Recognize and identify different parts of FGT.</p> <p>Explain the role of hormonal assessment.</p> <p>Outline histologic and cytologic cellular components of normal FGT.</p> <p>Comprehend cells and cytological criteria for diagnosing infectious agents.</p> <p>Outline benign changes in the FGT.</p> <p>Analyse histological and cytological changes due to precancerous lesions</p>	<p>On successful completion of this module, students will be able to:</p> <p>Discuss different biological behaviour of epithelial cells.</p> <p>Explain and apply different methods of obtaining specimen from FGT.</p> <p>Correlate clinical history FGT to the hormonal pattern.</p> <p>Compare and contrast between normal histologic and cytologic epithelial cells found in the FGT.</p> <p>Identify and recognize cellular changes associated with different agents of infections.</p> <p>Explain and apply microscopic changes that are due to benign changes-FGT.</p> <p>Detailed microscopic analysis of precancerous</p>

						and malignancies of FGT. Demonstrate specialized techniques used histologically and cytologically in aiding with diagnosis of the FGT	lesions and malignancies of FGT. Application of specialized techniques in diagnosing histological and cytological cases of FGT.
Cytopathology 3	CTPHBA 3	50%	50%	7	12	<p>The purpose of this module is to provide students with the theoretical and practical knowledge to:</p> <p>Examine normal cellular content, benign changes and malignancies of the respiratory tract and oral cavity</p> <p>Examine agents of infection of the respiratory tract and oral cavity.</p> <p>Analyse normal cellular content, benign changes, and malignancies of the urinary tract.</p> <p>Recognize and construct normal cellular content, benign and malignant pathological aetiologies of the serous cavities.</p> <p>Outline FNA principle in cytology.</p> <p>Explain normal cellular content and pathology of the CNS.</p> <p>Explain normal cellular content and pathology of the gastrointestinal tract.</p>	<p>On successful completion of this module, students will be able to:</p> <p>Detailed discuss the normal cellular content, benign changes and malignancies of the respiratory tract and oral cavity.</p> <p>Outline different agents of infection of the respiratory tract and oral cavity.</p> <p>Compare and contrast normal cellular content, benign changes, and malignancies of the urinary tract.</p> <p>Differentiate cytomorphologically between benign and malignant pathological aetiologies of the serous cavities.</p> <p>Apply the principle of FNA-Breast and Thyroid gland.</p> <p>Discuss normal cellular content and pathology of the CNS.</p> <p>Assess normal cellular content and pathology of the gastrointestinal tract.</p>

Cytopathology 4	CTPHBY 4	50%	50%	8	120	The purpose of this module is to provide students with the theoretical and practical knowledge to integrate information learned and apply it in diagnostic cytopathological cases.	On successful completion of this module, students will be able to apply and integrate information acquired to make final diagnosis in the science of cytopathology.
Forensic Sciences 4	FRSHBY 4	50%	50%	8	120	The purpose of this module is to provide students with experience and a broad overview of evidence categories and crime types commonly encountered within the criminal justice system.	On successfully completing the module students will have knowledge and understanding of core and foundation scientific physical, biological, and chemical concepts, terminology, theory, units, conventions, and laboratory methods in relation to forensic science.
Haematology 2A	HAEHBA 2	50%	50%	6	12	The purpose of this module is to provide students with the theoretical and practical knowledge to identify normal haemopoiesis, recognise and interpret physiological changes in red cell number and morphology and finally to diagnose and understand the pathophysiology of various red cell diseases	On successful completion of this module, students will be able to: Understand, describe, interpret, and perform various haematology tests Understand, describe, and identify the processes involved in erythropoiesis Describe (identify the definition, incidence, pathophysiology, clinical features, aetiology, laboratory findings and treatment) various red cell disorders.
Haematology 2B	HAEHBB 2	50%	50%	6	12	The purpose of this module is to provide students with the theoretical and practical knowledge to identify normal leucopoiesis, recognise and interpret physiological changes in white cell number and	On successful completion of this module, students will be able to: Understand, describe, interpret and perform various haematology tests Understand, describe and identify the

						morphology and finally to diagnose and understand the pathophysiology of various white cell diseases.	processes involved in leucopoiesis Describe (identify the definition, incidence, pathophysiology, clinical features, aetiology, laboratory findings and treatment) various white cell disorders.
Haematology 3	HAEHBA 3	50%	50%	7	12	The purpose of this module is to provide students with the theoretical and practical knowledge to identify normal thrombopoiesis, recognise and interpret physiological changes and morphology and finally to diagnose and understand the pathophysiology of various haemostatic diseases.	On successful completion of this module, students will be able to: Understand, describe, interpret and perform various coagulation tests Understand, describe, and identify the processes involved in thrombopoiesis Describe (identify the definition, incidence, pathophysiology, clinical features, aetiology, laboratory findings and treatment) various haemostatic disorders.
Haematology 4	HAEHBY 4	50%	50%	8	120	The purpose of this module is to diagnose and understand the pathophysiology of various haematological diseases, including anaemias, haemostatic disorders and haematological malignancies.	On successful completion of this module, students will be able to: Describe (identify the definition, incidence, pathophysiology, clinical features, aetiology, laboratory findings and treatment) various haematological disorders by integrating the information learned in haematology 2-3. Understand, describe, interpret, and perform various haematology tests
Human Anatomy, Physiology and Disease 1	HAPDBY 1	100%	0%	6	30	The purpose of this module is to provide foundational knowledge for pathology and clinically related	On successful completion of this module, students will be able to: <u>Anatomy</u>

					<p>subjects. It will enable students to gain understanding of the structure of the human body and the relationship for the function of different organ systems. This module prepares the student for all the specialist subjects from second to final years.</p>	<p>Describe and apply all anatomical terminology. Describe the types of tissues in the body, classification and functions of epithelial tissue.</p> <p>Compare the structures and functions of the various types of connective tissue.</p> <p>Describe the muscle and neural tissue of the body, locate the major endocrine organs, describe their structure and the effect of the hormones they produce</p> <p>Describe the anatomy of the female reproductive system, mammary glands</p> <p>Discuss the organisation and structure of the nervous system, outline the structure of the central nervous system, describe the structure of the peripheral nervous system</p> <p>Describe the structure of the eye, ear and tongue, the anatomy of the heart, discuss the structure of blood vessels.</p> <p>Describe the anatomy of the respiratory system, the structure of the gastrointestinal tract, oral cavity, pharynx, stomach, and oesophagus, small intestine and associated glandular organs</p> <p>Understand fluid and electrolyte balance and their disorders</p> <p>Define the basic principles, terms and concepts of Physiology,</p>
--	--	--	--	--	--	---

							<p>different levels of organisation in living organisms.</p> <p>Identify the organ systems of the body, outline the characteristics of living organisms and discuss the survival needs of living organisms and the importance of homeostasis in living organisms.</p> <p>Understand infections and classify the different types of infections and the Host responses to infections</p> <p>Discuss the disease mechanisms involved in nutritional diseases</p>
Histopathology 2	HTPHBA 2	50%	50%	6	12	<p>The purpose of this module is to introduce the student to the basic concepts and branches of histopathology. This module will prepare the student for laboratory methods, procedures, and more complex material regarding histology techniques and content.</p>	<p>On successful completion of this module, students will be able to:</p> <p>use medical and technical terms, route specimens to specific laboratories and know what methods are used for different specimens in the Histology, Cytology and Cytogenetics laboratories</p> <p>cope with various levels of administration in the laboratory, practice ethical conduct and be familiar with laboratory safety procedures</p> <p>operate all relevant equipment/apparatus, fix, decalcify, process, infiltrate and embed tissue for Histology diagnosis together with quality control procedures</p>

							<p>master all necessary microtomy, staining techniques, fault finding, tissue identification and quality control in the Histology laboratory</p> <p>produce artefact free slides for the identification of pigments, theoretically know how to run and prepare mounts for an Anatomy and Pathology Museum</p>
Histopathology 4	HTPHBY 4	50%	50%	8	120	<p>The purpose of this module is to provide students with the theoretical and practical knowledge to integrate information learned and apply it in diagnostic histopathological cases.</p>	<p>On successful completion of this module, students will be able to:</p> <p>Describe (identify the definition, incidence, pathophysiology, clinical features, aetiology, laboratory findings and treatment) various histologically diagnosed disorders by integrating the information learned in histopathology 2.</p> <p>Understand, describe, interpret, and perform various histopathology tests</p>
Immunohaematology 2	IMHHBA 2	50%	50%	6	12	<p>The purpose of this module is to introduce students the to main clinical aspects of transfusion medicine</p>	<p>On successful completion of this module, students will understand:</p> <p>The transfusion processes.</p> <p>The membrane of the red blood cell. Erythrocyte antigens. The group AB0.</p> <p>The Rh and other blood groups. Importance of transfusion of blood groups.</p> <p>The red cell alloimmunization and transfusion compatibility testing.</p>

							<p>Autoimmune hemolytic disease.</p> <p>Blood components: preparation, storage, quality control.</p> <p>The immunohaematological and clinical criteria for the selection and assignment of blood components</p> <p>The transfusion's legislation. Relevance to the lab technician</p> <p>The good use of blood: transfusion safety and appropriateness. The main transfusion reactions</p> <p>Hemolytic disease of the newborn</p>
Immunohaematology 4	IMHHBY 4	50%	50%	8	120	The purpose of this module is to provide students with the theoretical and practical knowledge to integrate information learned and apply it in diagnostic	On successful completion of this module, students will know the main clinical aspects of transfusion medicine and practices of good use of blood.
Immunology 1	IMMHBB 1	50%	50%	6	12	This module will introduce the students to normal and abnormal physiology to the recognition and diagnoses of diseases affecting the systems that will be covered.	<p>After completion of this module students will be able to:</p> <p>Identify and solve problems in which responses demonstrate that responsible decisions using critical and creative thinking have been made regarding basic biological concepts.</p> <p>Work effectively with others as a member of a team, group, organisation, or community by means of project presentations</p> <p>Organise and manage oneself and one's</p>

							<p>activities responsibly and effectively by the attendance of lectures and self-study.</p> <p>Collect, analyse, organise and critically evaluate information by means of preparation of the project.</p> <p>Communicate effectively using visual, mathematical and/or language skills in the modes of an oral and written project presentation.</p> <p>Demonstrate an understanding of the world as a set of related systems by recognising that problem-solving contexts do not exist in isolation through the different anatomical/Physiological/Biological concepts</p>
Immunology 4	IMMHBY 4	50%	50%	8	120	The purpose of this module is to provide students with the theoretical and practical knowledge to integrate information learned and apply it in diagnostic.	<p>On successful completion of this module, students will be able to:</p> <p>Describe (identify the definition, incidence, pathophysiology, clinical features, aetiology, laboratory findings and treatment) various immunologically diagnosed disorders by integrating the information learned.</p> <p>Understand, describe, interpret, and perform various immunological tests</p>
Integrative Medical Laboratory Sciences IIIA (Clinical Practice Theory)	IMLHBA 3	50%	50%	7	9	The purpose of this module is to develop the proficiency to arrive at disease diagnosis by integrating information acquired from the	At the end of this module, you need to have achieved the following: Identify diseases by analysing the signs, symptoms

						different laboratory test results in all disciplines (core modules) in conjunction with a wholesome understanding of the disease from aetiology (cause), pathophysiology (mechanisms), and its manifestations (signs and symptom).	<p>Identify diseases by analysing laboratory tests and be able to demonstrate basic understanding of disease processes and how disease features allow for particular diagnostic methods to be used</p> <p>Be able to integrate laboratory findings for the diagnosis of disease</p> <p>Be able to work effectively with others as a member of a team, group, organisation or community by means of topic discussions, content preparation and presentations.</p> <p>Collect, analyse, organise and critically evaluate information in case studies, literature reviews and technology-based learning platforms to derive conclusions about a given topic or problem.</p>
Integrative Medical Laboratory Sciences IIIB (Clinical Practice)	IMLHBB 3	50%	50%	7	60	<p>The course provides an opportunity for the student to gain exposure to the following:</p> <ul style="list-style-type: none"> developing a broad insight into mainstream medical technology gaining “hands-on” experience in the practical operation of a working medical laboratory acquiring a basic level of skill in relevant laboratory techniques experiencing the working environment 	<p>On successful completion of this module, students will be able to:</p> <ul style="list-style-type: none"> Apply laboratory and work ethics, medical law and human rights Apply safety protocols applicable to medical pathology laboratories. Apply quality control procedures relevant to testing processes and laboratory standard operating procedures (sops). Maintain laboratory records and documentation in

						<p>of the practicing medical technologist</p> <p>experiencing differences in various disciplines within the medical laboratory</p> <p>Experiencing relationships with the employer, other members of the health-care team and colleagues within a medical laboratory</p> <p>Fulfilling part of the requirement of the relevant qualification.</p> <p>This exposure will allow the student to make an informed choice regarding their preferred discipline and, ultimately, their career path.</p>	<p>accordance with site specific sops.</p> <p>Discuss the workflow and compile an organogram of a laboratory.</p> <p>Maintain professional integrity and display dependability.</p> <p>Display co-operation and effective communication.</p> <p>Perform calculations relevant to reagent preparation and generation of patient results.</p> <p>Perform discipline specific outcomes as defined.</p>
Introduction to Laboratory Sciences 1A	IMLSBA 1	100%	0%	5	8	<p>The purpose of this module is to introduce the student to the profession and the various specializations in the diagnostic laboratory. This module will further introduce the students to medical law and ethic. These foundation courses pave the way from simple concepts to complex application of knowledge in case studies</p>	<p>The outcome is the achievement of the purpose of the qualification as stipulated in the curricula. This qualification also leads to registration with the Health Professions Council of South Africa (HPCSA) as Medical Laboratory Scientists. Introduction to Medical Laboratory Science, IMLSBA1 is a fundamental module for application of basic knowledge in Medical Laboratory practice. This module is the foundation for subsequent modules</p>
Introduction to laboratory Sciences 1B	IMLSBB 1	100%	0%	5	18	<p>This module will introduce students to medical laboratory science equipment, the requisite skills that are required for university level use and maintenance of</p>	<p>On successful completion of this module, students will have an:</p> <p>Understanding of common laboratory assays and functions.</p>

						<p>equipment . This module will further introduce the students to current 4IR developments that are being implemented in MLS. This module is not only relevant to the student's present academic programme but is also relevant to his/her future personal and professional life in Medical Science.</p>	<p>Understanding common laboratory assays collection and function.</p> <p>Understanding instrument calibration and knowing how to set acceptable limits for various applications.</p> <p>Understanding the principles of Spectrophotometry, Cytometry, microscopy, PCR thermocyclers and Automated laboratories.</p> <p>Guidelines for information management in a laboratory.</p> <p>Describing the principle of PCR and discussing PCR applications.</p> <p>Defining 4IR and its role in Modern Laboratory</p>
Laboratory Management 4	LBMHBA 4	50%	50%	8	5	<p>The purpose of this module is to introduce the student to the basic concepts of laboratory management and aims to introduce the topic of entrepreneurial laboratory management. It mainly focuses on the start of a new business, recruitment of new staff and the general management of staff.</p> <p>This module is not only relevant to the student's present academic programme but is also relevant to his/her future personal and professional life in Medical Technology.</p>	<p>On successful completion of this module, the student should be able to:</p> <p>Identify the different clients, socioeconomic level of population and competitors.</p> <p>Identify and comply with the legalities involved to start a medical technology laboratory.</p> <p>Compile a product mix by looking at the list of possible clients and their specific needs</p> <p>Compile a budget for the set-up cost, bridging finance for the first 3 months as well as creating an income statement.</p> <p>Devise a marketing strategy and focussed direction to optimally utilise the strengths of the</p>

							<p>laboratory and the clients available.</p> <p>Draw up a SWOT analysis for the proposed business as well as the different business opportunities identified</p> <p>Recruit, select and manage staff</p>
Medical Microbiology 2A	MDMHBA	50%	50%	6	12	The purpose of this module is to introduce the student to the basic concepts and branches of Microbiology.	On successful completion of this module, the student should be able to identify the basic requirements for the laboratory isolation of micro-organisms, understand the genetic structures and the processes necessary to control the growth and spread of micro-organisms during infections and in the environment.
Medical Microbiology 2B	MDMHBB 2	50%	50%	6	12	The purpose of this module is to introduce to students all the types of tasks they might be expected to perform in the routine medical microbiology laboratory. This will include the collection and handling of routine specimens, common isolates and how to identify them, their pathogenesis, and routine serological techniques.	On successful completion of this module, the student should be able to differentiate micro-organisms from various human samples, food, water and milk samples according to the microscopic, cultures, biochemical and where applicable serological and molecular reactions.
Medical Microbiology 3 (Virology, Mycology, Parasitology)	MDMHBA 3	50%	50%	7	12	The purpose of this module is to introduce the student to the identification of diseases associated with mycology infections, parasitology, and viruses.	On successful completion of this module, the student should be able to identify common fungal isolates based on the microscopic and colonial morphology, parasitic components like larvae, cysts and worms according to their life cycle and basic virology in terms of classification,

							replication processes, culture, epidemiology and control alongside the serological methods to detect viral infections.
Medical Microbiology 4	MDMHBY 4	50%	50%	8	120	The purpose of the module is to integrate the theoretical knowledge covered in the 3 years of study into the laboratory setting diagnosing actual patient samples and micro-organisms	On successful completion of this module, the student should be able to successfully apply all the microscopic, morphological, biochemical, serological, and molecular knowledge to provide a correct diagnosis
Pharmacology 4	PHMHBY 4	50%	50%	8	12	The purpose of the module is to focus students on the mechanisms by which chemical entities (drugs, hormones, transmitters, toxins) affect the human body. It is a vital discipline in Biomedical Sciences and of particular relevance to understanding how to treat many pathologies manifest in a patient population.	<p>On successful completion of this module, the student should be able to:</p> <p>Describe the role of pharmacology in the study of disease.</p> <p>Demonstrate an understanding of the action of drugs and factors affecting the interactions of drugs with the human body.</p> <p>Outline the process of drug discovery.</p> <p>Demonstrate an understanding of some experimental approaches in pharmacological science.</p> <p>Describe the contribution that pharmacology makes to other biomedical sciences.</p> <p>Analyse and interpret data from basic pharmacological experiments</p>
Physics 1B	PHYH1B 1	50%	50%	5	12	The purpose of this module is to provide a factual knowledge of definitions, methods and principles in Physics, and a broad background knowledge of basic	On successful completion of this module, the student should be able to: Show understanding of, describe and demonstrate:

						<p>Physics to aid in the understanding and interpretation of future scientific and technological development and to acquire the following life skills such as identifying and solving problems, working in groups and communicating effectively as is needed by the Biomedical Technologist. To develop the applied practical and laboratory skills of the students required in the Biomedical Technology field.</p>	<p>Energy, Motion applications in Biomedical Sciences, etc.</p> <p>Mechanics applications in biological science</p> <p>Total mechanical energy</p> <p>Fluid mechanics and sound applications</p> <p>Applications of Electrical potential and circuits</p> <p>Applications of optics and heat</p> <p>Radiation exposure (descriptive)</p>
Research Methods 3	RSMHBB 3	50%	50%	7	8	<p>The module aims to familiarise the student with the tools to develop an understanding of transitional research which encompasses basic science in the laboratory, clinical investigations, and population research. A sound study plan with a research question or hypothesis is ideal. It is important to understand the research need, how and when to design research. However, there is no single approach to planning a research study. It is, therefore, important for the student to have the tools to begin an enquiry that will lead to important advances in knowledge, albeit that they may be small or major scientific breakthroughs. This</p>	<p>On successful completion of this module, the student should be able to do composition, problem identification, designing a research topic, ethical guidelines, source referencing, plagiarism policies, data collection and analyses, significance of statistics in research and framing a research proposal</p>

						module aims to accomplish all these purposes for a successful research outcome.	
Research Project IV (Mini Dissertation in the field of Specialisation)	RSPHBY 4	50%	50%	8	12	The purpose of this module is to provide the necessary support to students to do a research project.	On successful completion of this module, the student should be able to write up and submit a scientific research report in a form of a dissertation.
Statistical Methods 1A	SMT01A 1	50%	50%	5	8	The purpose of this module is to provide the necessary support to students to deal with calculations and the handling of data encountered in the curricula and subsequent research topics.	On successful completion of this module, students will be able to do: Mathematical calculations Graphs and equations Basic description of statistical analysis Correlation analysis calculation of the correlation coefficient Chemical calculations

HS12.2 [DEPARTMENT OF CHIROPRACTIC](#)

BACHELOR OF HEALTH SCIENCES IN CHIROPRACTIC (B9C01Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Anatomy 2	ANTCH Y2	100%	0%	7	30	This module introduces advanced knowledge of human anatomy	On completion of this learning event, students should be able to: Understand the gross anatomy of the regions of the human body comprising the following units: surface anatomy and landmarks, skeletal anatomy, muscular and other soft tissue anatomy, cardiovascular anatomy, neural anatomy Describe the embryology of the human body comprising the following units: Early embryology and systemic/regional embryology (Head and

							Neck, Cardiovascular system, Gastrointestinal System, Urinary System, Reproductive System) Explain Systemic Histology of the human body comprising the following units: Basic tissues, Respiratory system, Cardiovascular system, Gastrointestinal System, Urinary System, Reproductive System, Endocrine System, Lymphatic System
Anatomy and Physiology 1	ANPCHY 1	100 %	0%	5	35	This modules introduces the student to the concepts of anatomy and physiology required for articulation into 2nd year modules in anatomy and physiology	On completion, the student will be able to; <ul style="list-style-type: none"> Understand the concepts and systems associated with anatomy and physiology, from human cells and tissues to surface anatomy Describe the anatomy of the various body systems, namely the structures and functions of the skin and appendages, the musculoskeletal system, the central and peripheral nervous system, the endocrine system, the reproductive system, the cardiovascular system, the lymphatic system, the lungs and respiratory system, the digestive tract and the urinary system. Discuss the physiology of the various body systems in relation to the anatomy and function of these systems.
Biodiversity	BIODIY1	100 %	0%	5	20	This module will enable you to gain the relevant introductory biological background applicable to Chiropractic and Complementary Medicine in the following topics: An introductory view of life; The cell; Genetic basis of life; Evolution; Microbiology and Evolution; Plant Evolution and Biology; Animal Evolution and Diversity.	<ol style="list-style-type: none"> Identify and solve problems in which responses demonstrate that responsible decisions using critical and creative thinking have been made regarding basic Anatomical/Physiological/Biological concepts. Work effectively with others as a member of a team, group, organisation or community by means of project presentations.

							<ol style="list-style-type: none"> 3. Organise and manage oneself and one's activities responsibly and effectively by the attendance of lectures and self-study. 4. Collect, analyse, organise and critically evaluate information by means of preparation of the project. 5. Communicate effectively using visual, mathematical and/or language skills in the modes of an oral and written project presentation. 6. Demonstrate an understanding of the world as a set of related systems by recognising that problem-solving contexts do not exist in isolation through the different Anatomical/Physiological/Biological concepts.
Chemistry1	CETCHY 1	50%	50%	5	20	<p>The primary purpose of this module is to develop the basic knowledge and understanding of chemical principles and techniques of general chemistry as required for further modules in Chiropractic and Homoeopathy.</p>	<ol style="list-style-type: none"> 1. Defining the science called chemistry and introducing some fundamental concepts. Make and record measurements of the properties and chemical behavior of matter. 2. Explain the atomic theory, discuss atomic structure, and finally describe the periodic table, which organizes the elements according to: <ol style="list-style-type: none"> 2.1 Atomic theory of matter 2.2 The structure of the atom 2.3 Nuclear structure; isotopes 2.4 Atomic masses 2.5 Periodic table of the elements 2.6 Chemical formulas, molecular and ionic substances 2.7 Naming simple compounds 2.8 Writing chemical equations 2.9 Balancing chemical equations 3. Establish a critical relationship between the

						<p>mass of a chemical substance and the quantity of that substance (in moles). Explore how the percentage composition and mass percentage of the elements in a chemical substance can be used to determine the chemical formula. Develop a molar interpretation of chemical equations, which then allows for calculation of the quantities of reactants and products.</p> <p>4. Explore how molecular and ionic substances behave when they dissolve in water to form solutions. Investigate several important types of reactions that typically occur in aqueous solution: precipitation reactions, acid–base reactions, and oxidation–reduction reactions. Quantitatively describe solutions using concentration. Finally, use chemical reactions in aqueous solution, determine the amount of substance or species present in materials.</p> <p>5. The Gaseous State Explain the quantitative relationships that describe the behavior of gases and develop a model of gases as molecules in constant random motion.</p> <p>6. Thermochemistry Understand the basic properties of heats of reaction and how to measure them, including how to use them.</p> <p>7. Discuss the nature of light. Understand the formation of chemical bonds and electronic structure of atoms. Discuss some basic notions of quantum mechanics, which is the theory currently applied to extremely small particles, such as electrons in atoms.</p> <p>8. Able to characterize an atomic orbital by four quantum numbers: n, l, m_l, and m_s. Discuss how electrons are distributed among the</p>
--	--	--	--	--	--	--

							<p>possible orbitals of an atom. Appreciate how the periodic table can be explained by the periodicity of the ground-state configurations of the elements</p> <p>9. Describe and discuss basic concepts of chemical bonding</p> <p>10. Predict the molecular geometry of a molecule—that is, its general shape as determined by the relative positions of atomic nuclei—with a simple model: the valence-shell electron-pair repulsion model. Explore molecular geometry, by explaining chemical bonding by means of valence bond theory, and be able to give insights into why bonds form and why they have definite directions in space, giving particular molecular geometries</p> <p>11. Organic Chemistry Define organic chemistry using terms such as functional groups, saturated or unsaturated, aromaticity and homologous series and be able to name and draw structures of the following classes of organic molecules:</p> <ul style="list-style-type: none">• Alkanes• Alkenes• Alkynes• Aromatic compounds• Alkyl halides• Alcohols and phenols• Ethers and thiols• Aldehydes and ketones• Carboxylic acids and derivatives <p>12. Investigate the diverse chemistry of transition elements. Transition elements can form a distinct set of substances (often highly colored) from complex ions called coordination compounds.</p>
Chiropractic Principles and	CPPCHY 1	100 %	0%	5	20	This modules introduces theoretical constructs	On completion the student will be able to

Practice 1						and history of the profession relating to the chiropractic profession.	<ul style="list-style-type: none"> • Have a good understanding of the History of Chiropractic. • Discuss the different types of Chiropractic techniques. • Have a comprehensive understanding of the different theories of Chiropractic. • Understand the role of chiropractic in the health arts and the scope of chiropractic, and its indications and contraindications.
Chiropractic Principles and Practice 2	CPPCHY 2	100 %	0%	7	20	This module introduces basic chiropractic principles including aspects relating to motion palpation, evidence based chiropractic and the biopsychosocial model, and evidence relating to safety and effectiveness of techniques in the profession	<p>On completion the student will be able to</p> <ul style="list-style-type: none"> • Explain how evidence based principles are applied in the chiropractic context • Discuss the relevant research relating to safety and effectiveness of chiropractic • Discuss the biopsychosocial model as it relates to chiropractic. • Demonstrate motion palpation of the spine • Demonstrate basic manipulation techniques
Chiropractic Principles and Practice 3	CPPCHY 3	100 %	0%	7	25	This module develops the students ability to perform basic spinal manipulative techniques, with a focus on biomechanics of manipulation and evidence based approaches.	<p>On completion the student will be able to</p> <ul style="list-style-type: none"> • Become re-acquainted with the osteology of the vertebral column and the pelvis. • Understand the location of the basic anatomical landmarks of the musculoskeletal system (living anatomy pertaining specifically to the practice of chiropractic) and be able to apply this information in the practice of manipulative adjusting procedures. • Understand and apply anatomical spinal levels to the vertebral column on a patient. • Evaluate posture in the standing positions. • Assess the biomechanical function of the vertebral column using motion palpation technique.

						<ul style="list-style-type: none"> • Assess every such joint of the vertebral column in all directions of range of motion and further to describe restricted ranges of motion as such detected on motion palpation. • Understand and describe the functional anatomy of the vertebral column and the pelvis in order to understand, visualize and ably perform the practice of motion palpation of the vertebral column. • Become acquainted, acquire and perfect the basic chiropractic technique set-ups in all positions across the four areas of the vertebral column (cervical, thoracic, lumbar and pelvis areas). • Competently manipulate a joint at any prescribed level using any of the techniques in this course in a controlled environment i.e. under supervision by a qualified Chiropractor. • To begin to think in a clinical manner with regard to the presentation of uncomplicated cases in the management of a neuromusculoskeletal problem. • Understand the basic research background validating Chiropractic as the choice of treatment available for the management of back pain, neck pain and headache of neuromusculoskeletal origin. • Become generally acquainted with some of the measurement tools available for the subjective
--	--	--	--	--	--	--

							measurement of pain and disability as they pertain to lower back and neck pain.
Chiropractic Principles and Practice 4	CPPCHY 4	100 %	0%	8	25	This module presents chiropractic spinal manipulative techniques, and contra-indications and the appropriate assessments techniques at an advanced level for each technique.	<p>On completion of this module, student should be able to:</p> <ul style="list-style-type: none"> • Discriminate the relevant listings for the specific adjustment techniques. • Perform the adjustment correctly, with knowledge of the correct patient position, doctors position, contact and type of thrust. • Evaluate the biomechanics of the spine with relevance to the adjustment in terms of patient management. • Arrange the contra-indications and precautions of chiropractic manipulative therapy. • Effectively utilize the theoretical knowledge acquired and apply it practically to choose the correct procedures to be utilized on patients
Clinical and Applied Biomechanics 4	CABCHA 4	100 %	0%	8	10	This module will present the physical properties and mechanical behavior of body tissues, including mechanisms of injury and pathological processes and the necessary spinal biomechanical knowledge required in clinical chiropractic practice, in specific relation to spinal manipulation and rehabilitation.	<p>On completion of this module the student will be able to:</p> <ul style="list-style-type: none"> • Arrange with various biomechanical definitions concepts. • Organise anatomy and function of body tissues and relate this to their mechanical behaviour. • Distinguish the biomechanics of separate spinal regions in detail including clinical application to common spinal pathologies. • Discriminate the common postural faults and provide rehabilitative protocols.
Clinical Chiropractic 4	CLCCHY 4	100 %	0%	8	25	This module presents the basis from which to manage all patients that you will treat. This course provides a	<p>On completion of this module as student should be able to:</p> <ul style="list-style-type: none"> • Perform a Cervical spine regional examination

						<p>tangible link between theoretical knowledge and practice. It will present knowledge which will enable a determination of which cases may be treated by Chiropractors and which will have to be referred out to other health care professionals.</p>	<p>to formulate a diagnosis</p> <ul style="list-style-type: none"> • Perform a Lumbar spine regional examination to be able to formulate a diagnosis • Have a comprehensive understanding of the different conditions that may affect the human spine in the assessment of a patient • to differentiate and diagnose the various conditions that may affect the human spine. • Know what special investigations and additional tests may be required to diagnose a specific condition. • Have a good understanding of the various congenital anomalies (abnormalities) that may affect the spine and how these may affect CMT treatment options.
Clinical Diagnostics 3	CLDCHY 3	100 %	0%	7	20	<p>This module introduces the physical examination of patients in a systematic manner to determine and identify abnormal findings</p>	<p>On completion the student will be able to:</p> <ul style="list-style-type: none"> • Outline the steps involved in case taking and the approach to a patients and their symptoms • Take a case from a patient, including a comprehensive health history, presenting complaints and a review of systems • Explain the concepts associated with the process of differential diagnosis • Identify diagnostic tests and special investigations that may be performed for each body system • Conduct a general survey of a patient, including vital signs (blood pressure, pulse rate, respiratory rate and temperature) and general observations • Perform a physical examination on a patient, including all relevant examinations that must be completed for the assessment of each system and at various life stages.

Clinical Practice 4	CPRCHY 4	100 %	0%	8	25	<p>This module introduces Good Medical Practice and Clinical Practice relating to:</p> <ul style="list-style-type: none"> • Haematology • Cardiovascular • Peripheral Vascular • Respiratory • Neurology • Musculoskeletal • Dermatology • Mental • Endocrinology • Gastro-intestinal • Genito-urinary • Paediatrics • Infectious diseases • Head and neck (Ear, Nose, Throat) 	<p>On completion the student will be able to:</p> <ul style="list-style-type: none"> • Identify and solve clinical problems, including identifying and implementing basic therapeutic interventions for pre-diagnosed patients • Make responsible decisions using critical and creative thinking. • Work effectively with others as a member of a team, group, organisation, community. • Critically evaluate information through the process of collecting, analyzing and organizing information • Communicate effectively using visual, mathematical and/or language skills in the modes of oral and/or written persuasion. • Use science and technology effectively and critically, showing responsibility towards the environment and health of others
Clinical Psychology	CLPCHY 3	100 %	0%	7	15	<p>A student can be deemed competent if:</p> <ul style="list-style-type: none"> • Concepts to understand the following; Abnormal Behavior, Psychological and behavioral disorders: personality disorders, eating disorders, mood disorders, anxiety disorders, schizophrenia, substance abuse and addictions, somatoform and dissociative disorders, cognitive disorders, attention-deficit/hyperactivity disorder (ADHD), conduct problems (CP), sleep disorders, elimination disorders and chronic illness can be applied. • Legal and Ethical Issues in Abnormal Psychology, Clinical 	<p>On completion the student will be able to apply concepts to:</p> <p>Understand the following;</p> <ul style="list-style-type: none"> • Abnormal Behavior • Psychological and behavioral disorders: personality disorders, eating disorders, mood disorders, anxiety disorders, schizophrenia, substance abuse and addictions, somatoform and dissociative disorders, cognitive disorders, attention-deficit/hyperactivity disorder (ADHD), conduct problems (CP), sleep disorders, elimination disorders and chronic illness • Legal and Ethical Issues in Abnormal Psychology • Clinical Assessment and Diagnosis • Developmental & Learning Disorders • Child Maltreatment and

						<p>Assessment and Diagnosis, Developmental & Learning Disorders, Child Maltreatment and Non-accidental trauma can be explained and applied in the clinical environment.</p> <ul style="list-style-type: none"> The contextualization of an Integrative Approach to Abnormal Child Psychology and counselling skills are understood and an overview can be given and applied as applicable. 	<p>Non-accidental trauma</p> <ul style="list-style-type: none"> Overview and contextualization of an Integrative Approach to Abnormal Child Psychology Counselling skills
Human Biochemistry and Disease 1	HBDCHY 2	100 %	0%	7	25	<p>This course aims to familiarize the student with the biochemistry as it relates to human processes and their causal link to diseases.</p>	<p>On completion the student will be able to:</p> <ul style="list-style-type: none"> Understand and describe the common functional groups and bonds in biochemistry as well as describe the importance and special properties of water. Describe the concepts and underlying principles of pH and buffers and do calculations relevant to it. Describe the general properties, kinetic and mechanism of enzymes, their different classes and explain their function and general reaction of each class. Explain fully the relationship between enzymes, coenzymes and vitamins, as well as give the chemical structure, biochemical name, occurrence and the biochemical function of each vitamin. Explain the reaction mechanisms of multisubstrate reactions, as well as the different types of enzyme inhibition encountered. Define intermediary metabolism.

							<ul style="list-style-type: none"> •Describe the chemical composition of DNA and RNA in detail. •Understand the metabolism of amino acids and proteins •Understand the metabolism of carbohydrates Understand lipid metabolism
Medical Microbiology	MDMCHA 2	100 %	0%	6	10	The module aims at preparing students to discuss and apply microbiology principles, procedures and equipment in relation to the vocational degree in Chiropractic or Homoeopathy	<p>On completion of this learning event, students should be able to:</p> <ul style="list-style-type: none"> •Describe important discoveries in microbiology and explain their influence in modern times •Describe the structure and characteristics of the cell membrane •Describe interactions between micro-organisms and their human hosts <p>•Explain selected examples of serological tests</p> <ul style="list-style-type: none"> •Discuss characteristic, pathogenesis, transmission and effects of selected pathogenic microbes: •Staphylococcus •Streptococcus (S. pyogenes, S.pneumoniae and viridans) •Neisseria •Clostridium (C. tetani, C. botulinum and C. perfringens) •Mycobacteria •Enterobacteriaceae (Salmonella, Shigella, Escherichia coli) •Vibrio cholera •Give a brief overview of Yeasts •Describe the classification and characteristics of moulds. •Give an overview of medically important protozoa and parasites and their diseases and life cycles •Give a brief overview of Rickettsia, Chlamydia and Mycoplasma, their cell structures and roles in disease •Give an overview of virus

							characterisation and classification. •Describe control of micro-organisms
Myofascial and Auxiliary Therapies 3	MATCHY 3	100 %	0%	7	25	This module is presented to equip the students with the knowledge and skill to perform a number of ancillary techniques which may be used to facilitate the relief of pain in conjunction with the chiropractic manipulation.	On completion the student will be able to <ul style="list-style-type: none"> • Review the different types of pain as well as their causes and apply the theories of pain. • Differentiate the mechanism of pain relief. • Explain the modulation of pain and be able to utilize the various manual and electrotherapies effectively and safely. • Explain the effects and uses of the various manual and electrotherapies. • Explain the contra-indications and precautions of the manual and electrotherapies. • Effectively demonstrate the theoretical knowledge of each modality and apply it to the practical application.
Myofascial and Auxiliary Therapies 4	MATCHB 4	100 %	0%	8	10	This module will present common myofascial trigger point regions, with emphasis on dry needling techniques of spinal musculature	On completion of this module students should be able to: <ul style="list-style-type: none"> • Describe the anatomy, innervation and function of the muscles relevant to this course. • Explain the trigger points in these muscles. • Comment on and draw the referred pain patterns for these muscles. • Appraise the symptoms exhibited by specific muscles due to the presence of myofascial trigger points. • Diagnose specific myofascial conditions and give possible differential diagnoses. • Discriminate activating and perpetuating factors for each muscle. • Appraise a patient and locate trigger points. • Treat myofascial

							<p>trigger points using:</p> <ul style="list-style-type: none"> o Ice and stretch techniques o Dry needling techniques o Post isometric relaxation o Passive stretching <ul style="list-style-type: none"> • Construct a plan of corrective actions and advice to the patient. • Prescribe home based exercises to stretch and strengthen the involved muscles.
Pathology 3	PATCHY 3	100 %	0%	7	20	This module has the primary purpose of providing the learner with a well-rounded broad knowledge base and theory that enables them to describe the aetiology, pathogenesis, morphological changes and their clinical significance of specific disease processes as they affect particular organs or systems.	Successful completion of this module will equip the student with the theoretical knowledge necessary to explain the symptoms manifested by patients and provide a sound foundation for rational clinical care and therapy.
Personal and Professional Development 1	PPDCHY 1	100 %	0%	5	10	This modules introduces life skill relating to academic progress, skills and communication. Introduction to an African language will form part of this module.	<p>On completion the student will be able to:</p> <ul style="list-style-type: none"> • Use processes and systems of learning management within the University • Use the Harvard Date Author academic referencing system • Implement various study methods • Identify and utilise formats for writing essays and formal report. • Interpret material and form links between concepts and theories producing a coherent argument • Develop verbal and written reasoning and fluency. • Develop their ability to write effectively using academic and business conventions such as

							essays and formal reports.
Personal and Professional Development 2	PPDCHY 2	100 %	0%	7	10	This modules introduces concepts relating to personal development, evidence based practice, professional communication, referencing formats.	<p>On completion the student will be able to</p> <ul style="list-style-type: none"> • Identify their personal strengths and weaknesses in relation to their degree programme and the expectations of the professional environment or potential employers. •Work independently and in groups •Identify appropriate actions they should take to enhance their personal qualities and competences in relation to their life and their career •Improve their ability to study effectively and efficiently at undergraduate level •Interpret material in an original and evaluative way •Demonstrate techniques for presentations •Use a variety of information sources in their research and learning activities •Keep effective records of their learning and progress towards personal, academic and career goals •Plan, organise and structure work that is coherent, fluent and accurate. •Write effectively using academic and business conventions, such as essays and formal reports.
Pharmacology	PHMCHA 3	100 %	0%	6	10	Introduction to Pharmacology as related to health care and management in general.	<p>On completion the student will be able to understand and apply the principles of pharmacology in terms of:</p> <ul style="list-style-type: none"> • Drugs Affecting the Autonomic Nervous System • Pain and inflammation • Drugs Affecting the Immune System • Drugs Affecting Cardiovascular System

							<ul style="list-style-type: none"> • Drugs Affecting Central Nervous System • Drugs Affecting the Endocrine System • Respiratory System • Gastro-intestinal System • Chemotherapeutic Drugs
Physics of Health Sciences 1	PHYCHA 1	50%	50%	5	10	<p>This modules introduces physics concepts such as:</p> <ul style="list-style-type: none"> • Mechanics • Fluids • Heat • Waves and Sound • Electricity and Electromagnetism • Optics • Atomic Physics • Nuclear Physics 	<p>On completion the student will be able to</p> <ul style="list-style-type: none"> • Use scientific notation and the decimal system to manipulate SI-units. • Apply knowledge of vector theory in mechanical problems • Explain the concepts of work done, kinetic energy, potential energy, the law of conservation of energy, power • Explain heat capacity, latent heat, linear-, area-, volume-expansivities. • Define the terms density, relative density and pressure • Explain the production of static electricity by friction using the electron theory • Describe the nature and properties of alpha, beta and gamma radiations, derive from basic principles the law of radioactive decay • Explain wave-particle duality, quantum, quantized photon, quantization of energy, photo electric effect, wave nature of electrons • Explain the production and transmission of sound in a medium recognise sound as a longitudinal wave and describe the different types of ultrasound scan.
Physiology 2	PHYCHY 2	100 %	0%	6	10	<p>This modules introduces advanced applications of human physiology</p>	<p>On completion the student will be able to:</p> <ul style="list-style-type: none"> • Describe the structure and the functions of the integumentary system and its associated appendages • Describe the physiological mechanisms involved in movement • Explain the physiological mechanisms

						<p>of communication, integration and control of the nervous system.</p> <ul style="list-style-type: none"> • Relate the structures and functions of the endocrine glands and reproductive organs to their functions <ul style="list-style-type: none"> • Describe the anatomy and physiology of the circulatory system. <ul style="list-style-type: none"> • Describe the structure and function of the immune system, highlighting the role of the lymphatic system. • Describe the anatomy and physiology of the respiratory system. • Describe the anatomy and physiology of the urinary system.
Radiology	RADCHB 3	100 %	0%	7	10	<p>The overall purpose of this subject is to familiarize students with x-rays and normal Anatomy visible on x-rays.</p> <p>Understand where the x-ray image comes from, the different components in Radiology and when to refer to which one and the basic terminology. When the learner has completed the sections he/she should be able to demonstrate an understanding of:</p> <ul style="list-style-type: none"> • normal anatomy of the hand looks like on x-ray and identify the different structures. • normal anatomy of the wrist looks like on x-ray and identify the different structures. • what normal anatomy of the radius, ulna and elbow joint look like on x-ray and identify the different structures. • what normal anatomy of the humerus and shoulder joint look like on x-ray and identify the different structures. • what normal anatomy of the foot and ankle look like

							<p>on x-ray and identify the different structures.</p> <ul style="list-style-type: none"> • what normal anatomy of the tibia, fibula and knee look like on x-ray and identify the different structures. • what normal anatomy of the hip looks like on x-ray and identify the different structures. • what normal anatomy of the pelvis looks like on x-ray and identify the different structures. • what normal anatomy of the lumbar spine looks like on x-ray and identify the different structures. • what normal anatomy of the thoracic spine looks like on x-ray and identify the different structures. • what normal anatomy of the cervical spine looks like on x-ray and identify the different structures. • what normal anatomy of the thorax looks like on x-ray and identify the different structures. • what normal anatomy of the abdomen looks like on x-ray and identify the different structures. • what normal anatomy of the skull looks like on x-ray and identify the different structures.
Radiology 4	RADCHY 4	100 %	0%	8	20	The module serves to provide learners with sound basic theoretical knowledge and practical skills pertaining to all aspects of diagnostic radiography. It will	Describe the imaging components & imaging process in order to consistently produce radiographic images of optimal quality. Section 1: Units 1 - 3

					<p>enable learners to become competent in producing and interpreting diagnostic radiographs by applying their attained knowledge in the following academic year in a clinical context. The primary aim of the module is to extend the skills of chiropractic learners to include radiographic and radiologic skills that can be utilized in the diagnosis and treatment planning of chiropractic patients.</p>	<ul style="list-style-type: none"> • Describe the x-ray equipment, the production of x-rays and its interaction with matter in order to develop an understanding of the complexity of the equipment and the potential biological damage associated with diagnostic procedures. Section 1: Units 4 – 6 • Identify the biological effects of radiation on the human body to enable responsible decision making when requesting diagnostic procedures on patients. Section 1: Units 7 & 8 • State the basic principles and applications of Magnetic Resonance Imaging & Computer Tomography within the chiropractic context. Section 2: Unit 1 • Demonstrate a sound knowledge of the basic principles and terminology pertaining to diagnostic radiography in order to function and communicate efficiently within the field. Section 2: Unit 2 • Explain & perform the radiographic procedures covered in the module with the aim to produce radiographic images of a good diagnostic quality. Section 2: Units 3 - 10 • Apply sound, integrated knowledge of radiographic anatomy, physiology and pathology to ensure accurate assessment of images in terms of quality and pattern recognition. Section 2: Units 3 - 10 • Evaluate the quality of radiographic images to ensure consistency in the production of images with optimal diagnostic value. Section 2: Units 3 - 10 • Assess radiographic images in terms of pattern recognition to distinguish between normal and abnormal appearances. Section 2: Units 3 - 10 • Discuss basic patient care principles relative to the examination and condition
--	--	--	--	--	--	---

							<p>of the patient to ensure that the wellbeing of the patient is maintained. Section 2: Units 3 - 10</p> <ul style="list-style-type: none"> • Apply radiation protection measures to limit radiation exposure to patients, public & staff. Section 1: Unit 7 & Section 2: Units 3 – 1 • Demonstrate a sound knowledge of, and integration of bioethical principles, human rights and patient rights into all aspects of patient care and professional communication with patients, colleagues and the public.
Research Methodology 4	REMCHA 4	100 %	0%	8	5	<p>This module presents the following components:</p> <ul style="list-style-type: none"> •Research Concepts •Research Ethics and Integrity •The Scientific Method •Quantitative Research Methods •Qualitative Research Methods •Data Analysis and Theory in Qualitative and Quantitative Research •Review of CM Research Articles •Introduction to Mixed Methods Research 	<p>On completion of this module students should be able to:</p> <ul style="list-style-type: none"> •Discuss the basic concepts of research methodology •Identify and initiate an appropriate research project •Describe the processes of designing a research project and collecting data •Understand statistical analysis and interpretation of results •Review and critique research •Prepare a research proposal •Critically discuss ethical consideration in research, including plagiarism
Research Project 4	REPCHB 4	100 %	0%	8	5	<p>This module is designed to allow for demonstration of basic research skills in terms of proposal development and research design</p>	<p>On completion of this module students should be able to:</p> <ul style="list-style-type: none"> • Formulate a research report in the field of chiropractic
Sociology of Health and Health Care	SOHCHB 1	100 %	0%	6	10	<p>This module introduces the fundamentals of health and healthcare to provide a broad theoretical foundation for further studies related to complementary health care.</p>	<p>On completion the student will be able to</p> <ul style="list-style-type: none"> • Discuss the fundamentals of health and healthcare •Critically differentiate between the major perspectives associated with the field of psychology •Demonstrate an understanding of the biological processes and how they influence human behavior •Demonstrate an understanding of

							<p>awareness and the various levels experienced.</p> <ul style="list-style-type: none"> •Compare the three types of learning. •Describe the processes involved in memory: coding, storage and retrieval •Explain the various types of intelligence •Describe motivation and the different theories of emotion •Understand the role of counselling in healthcare •Differentiate between the different theories of personality

BACHELOR OF HEALTH SCIENCES IN COMPLEMENTARY MEDICINE (B9CM1Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Anatomy 2	ANTCHY 2	100%	0%	7	30	The purpose of this module is to enable the student to develop an extensive understanding of the gross anatomy of the human body and basic histology as it applies to the various systems.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Demonstrate an understanding the gross anatomy of the human body including surface anatomy and anatomical landmarks, the anatomy of muscles and the skeletal system, soft tissue anatomy, and the anatomy of the cardiovascular and neural systems • Explain the development of the human embryo, including early embryonic development and the embryonic development of

							<p>the head and neck, and the cardiovascular, gastrointestinal, urinary and reproductive systems</p> <p>Identify cells and histological samples including basic human tissues and tissue samples from the respiratory, cardiovascular, gastro-intestinal, urinary, reproductive, endocrine and lymphatic systems.</p>
Anatomy and Physiology 1	ANPCM Y1	100%	0%	5	35	<p>The purpose of this module is to establish a sound introduction to anatomy and physiology, including human cells and tissue, surface anatomy and systems within the human body.</p>	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Understand concepts and systems associated with anatomy and physiology, from human cells and tissues to surface anatomy • Describe the anatomy of the various body systems; namely the structures and functions of the skin and appendages, musculoskeletal system, central and peripheral nervous system, endocrine system, reproductive system, cardiovascular system,

							<p>lymphatic system, the lungs and respiratory system, digestive tract and urinary system</p> <p>Discuss the physiology of the various body systems in relation to the anatomy and function of these systems.</p>
Applied Homeopathic Materia Medica	AHMCMY 4	100%	0%	8	25	<p>The purpose of this module is to provide the student with the theoretical and research-based knowledge related to homeopathic medicines in order to develop strategies and formulations to treat and manage various health conditions.</p>	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Evaluate principles and theory of Homeopathy • Apply these theories in a practical/clinical setting • Demonstrate the ability to take a homeopathic case: analyse, repertories, find and justify the similimum or fundamental/functional remedy(simile) and differential remedies • Apply the principles of homeopathy to patient management and patient follow-up • Apply posology (potency, repetition of the dose) to cases • Apply the theory of miasms in relation to patient

							<p>assessment and management</p> <ul style="list-style-type: none"> • Identify illness, diseases and differentials associated with various systems of the body, commonly encountered in practice • Demonstrate diagnostic procedures • Manage the patient with specific homeopathic remedy and/or related therapies, using a holistic, integrated approach to the patient and their disease • Apply homeopathic drainage in case management.
Applied Nutritional Medicine	ANMCMY 4	100%	0%	8	10	The purpose of this module is to integrate theoretical nutritional knowledge with evidence-based practice in the management and treatment of particular health conditions.	<p>At the end of this module the student will be able to:</p> <p>Integrate the principles of nutritional medicine with evidence-based practice in the treatment and management of common health conditions related to the studied body systems.</p>
Applied Phytotherapy 1	APTCMY 4	100%	0%	8	25	The purpose of this module is to provide the student with the theoretical and research-based knowledge related to herbal medicines in order to develop strategies and formulations to treat	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Integrate information relating to the principles and theories of

						and manage various health conditions.	phytotherapy, case taking and prescribing <ul style="list-style-type: none"> • Develop phytotherapeutic protocols related to body systems and their associated health conditions • Formulate herbal medicine treatment strategies and apply to theoretical case studies.
Basic Life Support	BLSCMA 3	100%	0%	5	4	The purpose of this module is to enable the student to focus on the assessment of the emergency situation and provision of basic life support and basic first aid in order to stabilise patients prior to transfer to the emergency services or other suitable person or entity; and identify and treat common ailments and injuries within the relevant scope.	At the end of this module the student will be able to: <ul style="list-style-type: none"> • Demonstrate an understanding of emergency scene management • Assess and evaluate an emergency situation • Apply first aid procedures to the life-threatening situation Identify and treat common ailments and injuries within the relevant scope.
Biodiversity	BIODIY1	100%	0%	5	20	The purpose of this module is to gain the relevant introductory biological background in cell and cellular metabolism; mitosis and meiosis; genetics; evolution, ecology and the five kingdoms, and enable the student to develop an elementary but critical understanding of the botany for complementary	At the end of this module the student will be able to: <ul style="list-style-type: none"> • Demonstrate an understanding of the different cell types, and how they function and survive • Discuss the processes of cell division

						<p>medicine as it pertains to the kingdoms, structure and habitats of the plants.</p> <ul style="list-style-type: none"> • Describe the basic concepts associated with genetics and the evolution of cells and organisms • Distinguish between the 5 kingdoms of living organisms • Understand the relationships of living organisms with one another and their environment • Demonstrate an understanding of the plant kingdom, including broad characteristics of the divisions within the kingdom, the diversity and classification of plants • Identify the various habitats and ecosystems of plants • Compare various plants in terms of their structure and function, their components, their metabolism and their reproduction <p>Discuss the structures of plant cells and the functions of their cell membranes and organelles.</p>
Chemistry 1	CETCHY 1	50%	50%	5	20	<p>Science module The purpose of this module is to develop the basic knowledge and understanding of</p> <p>At the end of this module the student will be able to:</p>

						<p>chemical principles and techniques of general and applied chemistry as required for further modules in the field of complementary medicine.</p>	<ul style="list-style-type: none"> • Define rate law, rate constant, and reaction order. • Describe how temperature, activation energy, and molecular orientation influence reaction rates • Describe how a catalyst influences the rate of a reaction • Define and where necessary apply: equilibrium-constant expression and equilibrium constant, the law of mass action, homogeneous equilibrium and heterogeneous equilibrium, the reaction quotient, Q and Le Châtelier's principle • Describe the effect of a pressure or temperature change on chemical equilibrium • Understand the relationship between the strength of an acid and that of its conjugate base • Understand the periodic trends in the strengths of the binary acids HX, the rules for determining the
--	--	--	--	--	--	--	---

							<p>relative strengths of oxoacids and the relative acid strengths of a polyprotic acid and its anions.</p> <ul style="list-style-type: none"> • Write the chemical equations • Describe the pH change of a buffer solution with the addition of acid or base. • Define and give examples of organic concepts • Discuss substitution reactions involving equations and mechanisms of synthesis • Describe elimination reactions involving equations and mechanisms of synthesis • Demonstrate an understanding of addition reactions involving equations and mechanisms of synthesis <p>Explain reactions involving oxidising and reducing agents.</p>
Clinical Diagnostics 3	CLDCM Y3	100%	0%	7	20	The purpose of this module is to provide the student with the relevant knowledge necessary for case taking, evaluation and management of a patient in a clinical setting.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Outline the steps involved in case taking and the approach to a patients and their symptoms

							<ul style="list-style-type: none"> • Take a case from a patient, including a comprehensive health history, presenting complaints and a review of systems • Explain the concepts associated with the process of differential diagnosis • Identify diagnostic tests and special investigations that may be performed for each body system • Conduct a general survey of a patient, including vital signs (blood pressure, pulse rate, respiratory rate and temperature) and general observations • Perform a physical examination on a patient, including all relevant examinations that must be completed for the assessment of each system and at various life stages.
Clinical Practice 1	CPRCMY 4	100%	0%	8	30	Successful completion of this module will enable a student to competently assess a range of health problems presented in clinical practice and use a wide range of solutions for their	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Identify and solve clinical problems, including identifying and implementing

						<p>recognition, investigation and diagnosis. Students will also be able to begin to identify the correct treatment / management approach of the diagnosed condition.</p>	<p>basic therapeutic interventions for pre-diagnosed patients</p> <ul style="list-style-type: none"> • Make responsible decisions using critical and creative thinking • Work effectively with others as a member of a team, group, organisation, community. • Critically evaluate information through the process of collecting, analysing and organising information • Communicate effectively using visual, mathematical and/or language skills in the modes of oral and/or written persuasion • Use science and technology effectively and critically, showing responsibility towards the environment and health of others • Identify the appropriate therapeutic acupuncture protocols as it relates to body systems and disorders <p>Apply the relevant acupuncture techniques to the</p>
--	--	--	--	--	--	--	---

							treatment of pre-diagnosed conditions in a clinical/practical setting.
Clinical Psychology	CLPCHY 3	100%	0%	7	15	The purpose of this module is to introduce the student to the various theoretical models, psychological disorders and practice & ethics of clinical psychology.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Apply an integrative approach, with emphasis on biological, psychological and social aspects (Biopsychosocial Model) of the aetiology of psychopathology • Demonstrate an understanding of the psychological attributes that are deemed important within health and apply this knowledge to the field of clinical psychology • Define abnormal behaviour and describe psychological dysfunction, distress, and atypical or unexpected cultural response • Describe the clinical manifestations of psychological disorders including important aetiological, diagnostic, and phenomenological similarities

						<p>and differences between them</p> <ul style="list-style-type: none"> • Describe the medical complications associated clinical psychological disorders • Discuss the legal aspects to mental health care practice including the legal rights of patients as well as the laws and ethical codes which bind mental health practitioners • Explain the unique factors to consider in the South African context with reference to ethical conduct • Explain current approaches, including assessment, diagnostic practices, treatment modalities and appropriate tools for assessing psychological disorders • Demonstrate patient management skills and referrals • Describe the major categories and disorders related to physical and mental health and the key features and
--	--	--	--	--	--	--

							<p>treatments utilised for each</p> <ul style="list-style-type: none"> • Distinguish between the key characteristics and manifestations of developmental and learning disorders including important aetiological factors, diagnosis, and management of each disorder • Describe the main features of each type of child abuse and their developmental consequences • Apply the techniques of counselling in the clinical healthcare setting • Explain the nature and purposes of counselling and diagnosis and how the DSM is used to help therapists and counsellors make a psychiatric diagnosis or referral.
Complementary Medicine Practices 1	COPCMY 1	100%	0%	5	35	The purpose of this module is to enable the student to develop an elementary but critical understanding of the various complementary medicine disciplines as well as traditional medicine practices in South Africa, with particular emphasis on homeopathy,	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Describe the various CM professions regulated by the AHPCSA as well as have an understanding

						phytotherapy and acupuncture.	<p>of South African TM</p> <ul style="list-style-type: none"> Discuss the history, philosophy and principles of homeopathy, phytotherapy and acupuncture <p>Explain the principles of evidenced based practice (EBP) and its role within CM.</p>
Complementary Medicine Practices 2	COPCMY 2	100%	0%	6	40	The purpose of the module is to enable the student to develop an in-depth understanding and expansive knowledge base of complementary medicine practices, relating to homeopathy, phytotherapy and acupuncture, and their respective approaches to treatment.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> Explain how and why chronic cases are taken compared with acute cases as it pertains to the field of Complementary Medicine Describe the sources of homeopathic medicines and the techniques used in producing, dispensing and storing these remedies Demonstrate an understanding of the terminology relating to phytotherapy as well as the various herbal medicine preparations available Identify the meridians and main acupuncture points of the body

							<ul style="list-style-type: none"> • Demonstrate basic needling techniques.
Complementary Medicine Practices 3	COPCMY 3	100%	0%	7	10	The purpose of this module is to enable the student to develop a coherent and critical understanding of complementary practices, in particular acupuncture therapeutics, in order to develop treatment protocols in the management of common conditions/patients.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Describe in detail the principles and indications for the Bach Flower Remedies, Biochemic Tissue Salts, Electrolyoids, and Gemmotherapy remedies • Describe the principles of the various therapeutic acupuncture techniques with regards to treatment planning and outcome evaluation • Apply the various acupuncture techniques in relation to common medical conditions • Differentiate between the various auxiliary and other traditional forms of medicine.
Compounding and Dispensing Complementary Medicine	CDDCMB 4	100%	0%	8	10	The purpose of this module is to provide the student with an in-depth understanding and practical application of the compounding and dispensing of complementary medicines in a practice.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Apply ethical, legal and therapeutic considerations in all facets of dispensing

							<p>medicines and therapeutic devices</p> <ul style="list-style-type: none"> • Write, evaluate and interpret a prescription • Record relevant patient information • Compound the required medication according to good manufacturing and good pharmacy practice • Dispense the required amount of medication and provide appropriate advice. • Advise patients to ensure quality use of medicine and improve health status • Manage procurement and storage of medicines in terms of legislative and documentation requirements.
Good Pharmacy Practice	GPPCMA 4	100%	0%	8	10	<p>The purpose of this module is to provide the student with an understanding of the requirements for good pharmacy practice as relevant to their scope.</p>	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Understand the requirements for pharmacy appearance, control of access and safety of the pharmacy • Demonstrate an understanding of the requirements on pharmacy

							<p>appearance, control of access and safety of the pharmacy</p> <ul style="list-style-type: none"> • Understand the following requirements with the medicine room: Conditions, Storage area, Access control • Explain the different storage conditions for different products • Identify the requirements of writing and interpreting a prescription, and prescription record keeping • Understand the importance of safety in dispensing procedures • Advise patients on the correct use of medication • Be familiar with patient record • Understand the professional and ethical aspects when dealing with patients.
Homeopathic Materia Medica 1	HMMCM Y3	100%	0%	7	15	The purpose of this module is to provide the student with a sound foundation of homeopathic philosophy, homeopharmaceutics, Materia Medica and case taking.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Describe the history of homeopathy • Explain and analyse the principles and Law of Homeopathy

							<p>according to the Organon</p> <ul style="list-style-type: none"> • Explain the process of conducting a homeopathic proving • Analyse and practically demonstrate the homeopharmac eutics process • Discuss the development of chronic diseases and the interpretation, categorisation and analysis of miasms and constitutional types. • Describe, compare and apply the applications of the polychrests and related remedies • Competently take a homeopathic case and determine the appropriate remedy/ies.
Homeopathic Materia Medica 2	HMMCM Y4	100%	0%	8	20	The purpose of this module is to provide the student with an in-depth understanding and systematic knowledge base of the Materia Medica remedies used in a homeopathic practice.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Evaluate the characteristic indications of the polychrests, first aid remedies, nosodes, modern remedies, and other outlined groups of remedies <p>Evaluate a case study in terms of</p>

							miasmatic interpretation.
Human Biochemistry and Disease 1	HBDCMY 2	100%	0%	6	20	The purpose of this module is to enable the student to develop an understanding of human biochemistry in assessing disease.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Describe the common functional groups and bonds in biochemistry as well as the special properties of water • Examine the chemical structures, composition and nature of proteins, carbohydrates and lipids • Describe the general properties of enzymes and how they work • Explain fully the relationship between enzymes, coenzymes and vitamins • Give the biochemical name, occurrence and the function of each vitamin • Discuss the different classes of energy rich compounds and the organic reaction mechanisms • Demonstrate an understanding of the major metabolic pathways and their control mechanisms: the urea cycle,

							<p>the citric acid cycle, the glycolytic pathway, oxidative phosphorylation etc</p> <ul style="list-style-type: none"> • Demonstrate an understanding of the basic chemistry and structures of the nucleic acids, which make up the genetic apparatus of the cell • Discuss biosynthesis of the nucleic acids and the transfer of genetic information to synthesis of a specified protein (transcription, translation).
Medical Microbiology	MDMCHA 2	100%	0%	6	10	<p>The purpose of this module is to introduce the principles of microbiology necessary in the field of medicine.</p>	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • State the normal flora and infective microorganisms of the human body and describe the host-parasite relationship • List the pathogenic microorganisms, their general characteristics, classifications, nomenclature and methods of identification of bacteria • State the sources, modes of transmission and describe the

						<p>pathogenesis of the diseases produced by the microorganisms</p> <ul style="list-style-type: none"> • Describe the mechanisms of immunity of infection • State the suitable antimicrobial agents for treatment and vaccines available for prevention of communicable diseases <p>Recommend the laboratory investigations for making a microbiological diagnosis.</p>
Nutritional Medicine	NTMCMY 3	100%	0%	7	15	<p>The purpose of this module is to provide students with fundamental knowledge associated with human metabolism, introducing an understanding of the importance of nutrition in relation to human physiology and health.</p> <p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Demonstrate an understanding of how nutrients relate to human metabolism and health • Outline the principles of nutrition and its role in health and disease prevention • Evaluate the benefits and risks associated with the specialised diets commonly in use <p>Examine the range of nutritional requirements that impact people at particular life stages.</p>

Pathology	PATCMY 3	100%	0%	7	25	<p>The purpose of this module is to provide the student with the knowledge base and theory necessary to have a thorough understanding of the disease process by examining the basic reactions of cells and tissues to the abnormal stimuli that underlie all physical diseases. These fundamental aspects of general pathology are necessary to understand the specific responses of specialised organs and tissues examined in systemic pathology.</p>	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Discuss the physiological and pathology changes that take place in cells and how that relates to diseases, injury and healing • Understand the process of inflammation and the role of inflammation in pathology and the development of disease • Understand the processes of fluid homoeostasis, and how that relates to oedema, thrombosis and shock • Distinguish the functions of various components of the immune system, and the pathology of immune suppression, immune derangements and auto-immunity • Explain the process of carcinogenesis, and how that relates to the clinical manifestations, diagnosis and treatment of cancer • Identify the role of genetics in the
-----------	-------------	------	----	---	----	---	---

							<p>development of diseases</p> <ul style="list-style-type: none"> • Discuss the aetiology, clinical features and diagnosis of common paediatric illnesses • Review the major infectious and environmental diseases in terms of their aetiology, clinical features, diagnosis and treatment • Demonstrate an understanding of the major pathologies that affect the various systems of the body in terms of their pathogenesis, clinical features, diagnosis and treatment.
Personal and Professional Development 1	PPDCMY 1	100%	0%	5	5	The purpose of this module is to enhance the students' ability to benefit from the academic learning process and develop personal, communication and career management skills.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Use processes and systems of learning management within the University • Use the Harvard Date Author academic referencing system • Implement various study methods • Identify and utilise formats for writing

							<p>essays and formal report</p> <ul style="list-style-type: none"> • Interpret material and form links between concepts and theories producing a coherent argument • Verbal and written reasoning and fluency <p>Write effectively using academic and business conventions such as essays and formal reports.</p>
Personal and Professional Development 2	PPDCMY 2	100%	0%	6	5	The purpose of this module is to enable students to develop skills and competences that enhances their competence in communication, self-management, problem solving, self-confidence, flexibility and the ability to learn effectively.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Identify their personal strengths and weaknesses in relation to their degree programme and the expectations of the professional environment or potential employers • Work independently and in groups • Identify appropriate actions they should take to enhance their personal qualities and competences in relation to their life and their career • Study effectively and efficiently at

							<p>undergraduate level</p> <ul style="list-style-type: none"> • Interpret material in an original and evaluative way • Demonstrate techniques for presentations • Use a variety of information sources in their research and learning activities • Keep records of their learning and progress towards personal, academic and career goals • Plan, organise and structure work that is coherent, fluent and accurate <p>Write using academic and business conventions, such as essays and formal reports.</p>
Pharmacology	PHMCMA3	100%	0%	6	14	The purpose of this module is introduce the student to the major concepts underpinning pharmacology, mechanisms of drug actions and their therapeutic interventions in disease.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Demonstrate a basic understanding of drug naming, pharmacokinetics, and pharmacodynamics • Identify drug interactions and their consequences <p>Apply the following information for all drugs in the different body systems: Pharmacological class, Mechanism</p>

							of Action, Pharmacokinetics, Therapeutic Uses, Adverse Effects, Contraindications, Drug Interaction, Food Interactions, Herbal Interactions, Disease Interactions
Physics for Health Sciences 1	PHYCHA 1	50%	50%	5	10	Science module The purpose of this module is to develop the basic knowledge and understanding of physics.	At the end of this module the student will be able to: <ul style="list-style-type: none"> • Use scientific notation and the decimal system to manipulate SI-units. • Apply knowledge of vector theory in mechanical problems • Explain the concepts of work done, kinetic energy, potential energy, the law of conservation of energy, power • Explain heat capacity, latent heat, linear-, area-, volume-expansivities • Define the terms density, relative density and pressure • Explain the production of static electricity by friction using the electron theory • Describe the nature and properties of alpha, beta and gamma radiations, derive from basic principles of the law of

						<p>radioactive decay</p> <ul style="list-style-type: none"> • Explain wave-particle duality, quantum, quantized photon, quantization of energy, photo electric effect, wave nature of electrons <p>Explain the production and transmission of sound and describe the different types of ultrasound scan.</p>
Physiology 2	PHYCMY 2	100%	0%	6	25	<p>The purpose of this module is to enable the student to describe the relationship between the structure and the specialised functions of the cardiovascular, immune and respiratory systems, the digestive, excretory, reproductive systems (and related) to develop students reasoning to assess health related needs and problems in humans.</p> <p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Describe the systems that regulate body functions • Understand the regulation and functioning of the systems of the body: the skin and appendages, musculoskeletal system and movement, central and peripheral nervous system and the senses, endocrine and reproductive systems, the heart and circulation, immunity and the lymphatic system, the lungs and respiratory system, metabolism and digestion, and the urinary system and urination

							Explain the roles that various systems have on the functioning and regulation of other systems for the maintenance of health and homeostasis.
Phytochemistry	PHTCM B3	100%	0%	7	10	The purpose of this module is to provide students with the fundamental branch of chemistry dealing with the chemical processes associated with plant life and the chemical compounds produced by plants.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Describe in detail the molecular genetics and genomics of plant cells • Understand the impact of environmental and ecological change on plants • Name and classify plant constituents • Demonstrate the various techniques of plant extraction and herbal medicine preparation • Understand the effects of the primary and secondary metabolites of plants • Outline the principles of validating herbal therapeutics.
Phytotherapy 1	PTTCMY 3	100%	0%	7	15	The purpose of this module is to expand the students' knowledge regarding the principles of phytotherapy, efficacy and safety of herbal medicines and their various dosage forms, as well as identify	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Explain the principles of phytotherapy • Describe the various dosage forms of herbal medicines

						commonly used medicinal plants.	<ul style="list-style-type: none"> Understand herb-herb and herb-drug interactions and safety Demonstrate an understanding of case taking in the and the development of relevant treatment strategies Discuss the indications of commonly used medicinal plants <p>Critically evaluate evidence for efficacy of herbal medicines.</p>
Phytotherapy 2	PTTCMY 4	100%	0%	7	20	The purpose of this module is to provide the student with an in-depth understanding and systematic knowledge base of the individual herbs commonly used in a phytotherapy practice.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> Discuss the clinically relevant information including effects, uses, dosage, preparations, and safety of individual herbs Explain the botany, pharmacology, efficacy, indications, contra-indications, and safety of individual herbs.
Practice Management and Jurisprudence 1	PMJCM A4	100%	0%	7	8	The purpose of this module is to confront the student with the numerous challenges and considerations specifically required in the establishment of a complementary medicine private practice, to introduce	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> Demonstrate knowledge of pertinent legislation and regulations

						<p>the concept of legal regulation of health professions in general as well as to present specific areas of regulation that are required to be known by the graduate when entering practice.</p>	<ul style="list-style-type: none"> • Conduct a practice feasibility study and business plan is conducted • Understanding and apply the basic principles of financial management • Describe principles of professional conduct are described and evaluated by means of oral and written evidence • Identify parameters in order to maintain patient dignity whilst acknowledging patient diversity <p>Demonstrate an understanding of the legislation and regulations that pertain to the prescribing, compounding or dispensing.</p>
Research Methods in Complementary Medicine	REMCMA 4	100%	0%	7	10	<p>The purpose of this module is to provide the student with an understanding and systematic knowledge base of research methods in complementary medicine.</p>	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Discuss the basic concepts of research methodology • Identify and initiate an appropriate research project • Review and critique research • Describe the processes of designing a research project and collecting data

							<ul style="list-style-type: none"> • Understand statistical analysis and interpretation of results • Prepare a research proposal • Critically discuss ethical consideration in research, including plagiarism.
Research Project in Complementary Medicine	REPCMB 4	100%	0%	7	10	The research project is aimed at assisting the student to demonstrate sound knowledge, competences and skills gained from all modules to successfully identify a complementary medicine area of research.	<p>At the end of this module the student will be able to:</p> <p>Formulate a research report in the field of complementary medicine.</p>
Sociology of Health and Health Care	SOHCHB 1	100%	0%	6	10	The purpose of this module is to enable the student to develop an understanding of the sociology of health and its application in the field of Complementary Health care in South Africa, with particular emphasis on homeopathy, phytotherapy and acupuncture.	<p>At the end of this module the student will be able to:</p> <ul style="list-style-type: none"> • Discuss the fundamentals of health and healthcare • Critically differentiate between the major perspectives associated with the field of psychology • Demonstrate an understanding of the biological processes and how they influence human behavior • Demonstrate an understanding of awareness and the various levels experienced

							<ul style="list-style-type: none"> • Compare the three types of learning • Describe the processes involved in memory: coding, storage and retrieval • Explain the various types of intelligence • Describe motivation and the different theories of emotion • Understand the role of counselling in healthcare • Differentiate between the different theories of personality.

POSTGRADUATE DIPLOMA IN ACUPUNCTURE (E9A01Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Acupuncture Therapeutics 1	ACT01Y 1	100%	0%	5	20	The purpose of this module is to enable the student to develop a coherent and critical understanding of acupuncture therapeutics, in order to develop treatment protocols in the management of common conditions.	Describe the principles of the various therapeutic acupuncture techniques with regards to treatment planning and outcome evaluation. Apply the various acupuncture techniques in relation to common medical conditions.
Acupuncture Therapeutics 2	ACT01Y 2	100%	0%	5	24	The purpose of this module is to provide the student with an in-depth understanding of the theoretical and research-based knowledge related	Compare and contrast various acupuncture treatments sourced from research and classical texts appropriate to individual cases to

						to acupuncture in order to develop strategies and formulations to treat and manage various health conditions.	improve overall treatment efficacy and prognosis. Identify the appropriate therapeutic acupuncture protocols as they relate to body systems and disorders.
Applied Research	APRCM Y2	100%	0%	5	8	This module is aimed at assisting the student to demonstrate sound knowledge, competences and skills gained from all modules to successfully conduct a research project in the field of acupuncture.	Formulate a research report in the field of acupuncture.
Clinical Acupuncture 1	CLACMY 1	100%	0%	5	15	The purpose of this module is to introduce the student to the clinical skills required to practice acupuncture i.e. developing practical skills in needle insertion and manipulation, cupping techniques and application of moxibustion.	At the end of this module the student will be able to: Apply the appropriate hygiene and safety protocols required when administering acupuncture treatments. Demonstrate safe needling insertion and manipulation techniques. Demonstrate safe moxibustion and cupping practices.
Clinical Acupuncture 2	CLACMY 2	100%	0%	5	20	The purpose of this module is to provide the student with advanced clinical acupuncture skills related to the treatment and management of patients.	Integrate information relating to the principles and theories of acupuncture, including case taking, in a clinical setting Formulate acupuncture treatment strategies for application in a clinical setting

							Critically evaluate the outcome of each individualized treatment plan based on follow-up feedback from the patient.
Ethics and Jurisprudence	ETJCMY 2	100%	0%	5	8	The purpose of this module is to provide the student with the ethical foundations required in private practice, and to expand on their knowledge pertaining to legal regulation of health professions and specifically acupuncture practice.	Demonstrate knowledge and apply principles of ethical conduct. Discuss and acknowledge the various aspects of patient diversity.
Foundations of Acupuncture	FOACM Y1	100%	0%	5	15	The purpose of the module is to enable the student to develop an in-depth understanding of the history, philosophy and principles of acupuncture practices, its efficacy and safety, and the role of evidence-based practice (EBP) in its approach to treatment.	Relate the history, philosophy and principles of acupuncture Demonstrate an understanding of the efficacy and safety of the various acupuncture treatment strategies.
Needling Techniques 1	NETCM Y1	100%	0%	5	10	The purpose of this module is to provide students with practical experience related to the various acupuncture needling techniques.	Identify meridians, their course, diagnosis, and pathology relating to each meridian. Have an understanding of point selection in the management of common disorders. Demonstrate the various needling techniques used in acupuncture treatments.

POSTGRADUATE DIPLOMA IN PHYTOTHERAPY (E9P01Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Applied Phytotherapy 1	APT01Y 1	100%	0%	5	25	The purpose of this module is to provide the student with an in-depth understanding and systematic knowledge-base of the individual herbs commonly used in a phytotherapy practice.	At the end of this module the student will be able to: Discuss the clinically relevant information including the effects, uses, dosage, and preparations of individual herbs. Explain the botany, pharmacology, efficacy, and indications of individual herbs. Consider the contra-indications and safety of individual herbs.
Applied Research	APRCM Y2	100%	0%	5	8	This module is aimed at assisting the student to demonstrate sound knowledge, competences and skills gained from all modules to successfully conduct a research project in the field of phytotherapy.	At the end of this module the student will be able to: Formulate a research report in the field of phytotherapy.
Clinical Phytotherapy	CLPCMY 2	100%	0%	5	30	The purpose of this module is to provide the student with theoretical and research-based knowledge related to herbal medicines in order to develop strategies and formulations to treat and manage various health conditions.	At the end of this module the student will be able to: Integrate information relating to the principles and theories of phytotherapy, case taking and prescribing. Develop phytotherapeutic protocols related to

							body systems and their associated health conditions.
Ethics and Jurisprudence	ETJCMY 2	100%	0%	5	8	The purpose of this module is to provide the student with the ethical foundations required in private practice, and to expand on their knowledge pertaining to legal regulation of health professions and specifically phytotherapy practice.	<p>At the end of this module the student will be able to:</p> <p>Demonstrate knowledge and apply principles of ethical conduct.</p> <p>Explain the importance of the maintenance of patient dignity with reference to human rights.</p> <p>Detail the legislation, regulations and guidelines that pertain to healthcare practice in South Africa.</p>
Foundations of Phytotherapy 1	FOPCM Y1	100%	0%	5	10	The purpose of the module is to enable the student to develop an in-depth understanding of the history, philosophy and principles of phytotherapy practices, efficacy and safety of herbal medicines and their various dosage forms, and the role of evidence-based practice (EBP) in its approach to treatment.	<p>At the end of this module the student will be able to:</p> <p>Discuss the history, philosophy and principles of phytotherapy.</p> <p>Have an understanding of the various constituents and dosage forms of herbal medicines, as well as the safety issues around using herbs, including herb-herb and herb-drug interactions.</p> <p>Demonstrate an understanding of case taking and the development of relevant treatment strategies.</p>

Herbal Pharmacognosy	HPCCM Y1	100%	0%	5	10	The purpose of this module is to provide students with knowledge regarding medicinal plant identification, classification, and preparation, as well as the integration of traditional herbal knowledge with modern phytotherapy research.	At the end of this module the student will be able to: Identify and classify common medicinal plants. Describe the techniques used in harvesting, producing, dispensing and storing herbal medicines. Display an understanding of the relationship between traditional or empirical knowledge and evidence-based research regarding medicinal plants.
Herbal Pharmacology and Phytochemistry	HPPCM Y1	100%	0%	5	15	The purpose of this module is to provide students with the chemistry concept that relate to the chemical processes associated with plant life and the chemical compounds produced by plants, as well as to analyse and apply advanced concepts of the pharmacology of herbal medicines, particularly of the key chemical constituents.	At the end of this module the student will be able to: Have an understanding of the impact of environmental and ecological change on plants and their constituents. Outline the principles of validating herbal therapeutics. Evaluate the principles of pharmacodynamics and pharmacokinetics in relation to medicinal plants, in relation to the various chemical constituents.
Herbal Pharmacy	HEPCM Y2	100%	0%	5	14	The purpose of this module is to provide the student with an in-depth understanding and practical	At the end of this module the student will be able to:

						application of the manufacturing and dispensing of herbal medicines in a practice.	Apply ethical, legal and therapeutic considerations in all facets of dispensing medicines and therapeutic devices. Write, evaluate, interpret and prepare a prescription. Counsel and advise patients to ensure the correct use of medicine and improve health status.

						patient care and treatment.	professionally interact with patients and assess patients in order to make accurate diagnoses and sound clinical judgments. 4. Demonstrate, by performing patient simulations and clinical vignettes, the ability to provide appropriate care to patients suffering from a variety of injuries and illnesses commonly found in the pre-hospital setting according to the expected level of care of a graduate paramedic.
Emergency Medical Care 2 Theory	EMCTH2 2	100%	0%	6	36	The Emergency Medical Care II Theory Module deals with theoretical knowledge and principles that underpin the provision of medical care in the acute pre-hospital and emergency department settings. On completion students should be able to answer complex questions regarding the principles of pre-hospital emergency care. Students should also demonstrate the ability to integrate principles of anatomy, physiology, and foundations of professional practice to patient care.	1. Discuss effective communication and apply the principles of medical ethics, professional behavior and the legal framework to the context within which emergency care practitioners operate in scenario based written knowledge tasks. 2. Demonstrate, by answering scenario-based questions in integrated assessments, the ability to make sound clinical judgments in simple cases using knowledge and understanding of human and basic sciences underpinning emergency medical care. 3. Discuss, by

							answering simple, as well as complex questions during written knowledge tasks, how to provide emergency medical care to patients suffering from illnesses and injuries commonly found in the South African pre-hospital setting to the level of a graduate paramedic.
End User Computing	ENUC01 1	100%	0%	5	6	The End User Computing Module provides the student with the basic skills necessary to operate a personal computer, prepare, edit, print documents, send and receive emails as well as utilise the internet as a source of information.	<ol style="list-style-type: none"> 1. Explain concepts and terms associated with Information Technology (IT). 2. Demonstrate the ability in using common functions of a PC and its operating system. 3. Demonstrate the ability to use a word processing application on a computer. 4. Demonstrate the ability to use a presentation application on a computer. 5. Explain concepts and terms associated with using the Internet. 6. Demonstrate the ability to use e-mail software on a computer. 7. Demonstrate the ability to use a spreadsheet application on a computer. 8. Demonstrate the ability to use a database on a computer.
Fire Search & Rescue	FSAR02 2	100%	0%	6	12	The Fire Search and Rescue module provides the student with the necessary knowledge and skills to work as part of a	1. Comprehensively explain and discuss principles and theories that inform Fire Dynamics and Fire Behaviour

						<p>team at incidents where oxygen deprived environments, smoke filled compartments or heat-filled compartments are present, and there are victims that require search and rescue.</p>	<p>2. Explain the role and function of Personal Protective Equipment used for Fire Search and Rescue, as well as the selection, inspection and use thereof.</p> <p>3. Discuss the various fire Search and Rescue Techniques on the Fireground</p> <p>4. Discuss the role and function of Fire Fighting Equipment, and demonstrate how to select, inspect and correct use of the equipment.</p>
Foundations of Professional Practice	FOPP01 1	100%	0%	5	10	<p>The Foundations of Professional Practice Module introduces the structure and functioning of the broader health sector within the country, as well as how emergency services operate and function, to the student. This module also assists the student to understand their role and function within the context of the legal framework within which the paramedic operates. The module delineates issues such as expected conduct, professional behaviour and ethics. This module also covers the correct usage, inspection and, where applicable, the maintenance of vehicles and medical equipment used in the emergency care environment.</p>	<p>1. Discuss the structure and function of Emergency Medical Service (EMS) systems in South Africa and explain how the EMS relates to the broader health care structures within the country.</p> <p>2. Discuss a variety of topics related to medical ethics, professional behaviour and the legal framework within the Emergency Medical Services context.</p> <p>3. Explain the various types of emergency service vehicles and, where applicable, demonstrate the correct operating procedures that should be followed when using such vehicles.</p> <p>4. Discuss the importance of health and safety in</p>

							<p>and around the workplace and to identify the potential hazards that you may be faced with during the course of your duties as an emergency care practitioner.</p> <p>5. Demonstrate the ability to professionally communicate and discuss the various types of communication systems that may be used in the emergency services.</p> <p>6. Discuss useful generic skills that are necessary if you are to provide a professional service within a specific organizational framework (policies and procedures) as well as a legal framework.</p> <p>7. Demonstrate the ability to inspect, select, use, and maintain the various types of medical equipment in the emergency care and transportation environment.</p>
High Angle 1	HIAN022	100%	0%	6	12	<p>The High Angle 1 module provides the student with the necessary knowledge and skills that will act as a foundation to work safely at incidents involving victims that need to be accessed at height.</p>	<p>1. Discuss the role and function of equipment used during rope rescue, and demonstrate how to select, inspect and correct use of the equipment.</p> <p>2. Demonstrate how to tie and construct the various knots used in rope rescue.</p> <p>3. Demonstrate how</p>

							<p>to construct anchor points, as well as how to rig simply rope rescue systems.</p> <p>4. Discuss belaying principles and demonstrate various belaying techniques.</p> <p>5. Discuss abseiling principles and demonstrate various abseiling techniques.</p> <p>6. Discuss ascending principles and demonstrate various ascending techniques.</p> <p>7. Discuss Self-Rescue concepts within the discipline of rope rescue.</p>
Mental Health and Wellness	MHAW01 1	100%	0%	5	6	<p>The Mental Health and Wellness Module covers issues of stress and burnout including the ways in which the emergency care provider may manage their own mental wellbeing and that of their colleagues within the potentially stressful emergency care environment.</p>	<p>1. Explain the concept of mental health and link between mental health and physical wellbeing.</p> <p>2. Explain and identify depression, stress and stress management.</p> <p>3. Explain methods of conflict management.</p> <p>4. Explain the concepts behind crisis intervention.</p> <p>5. Describe human reactions to and ways of managing death and dying.</p> <p>6. Discuss substance abuse and the role of environment in mental health issues.</p> <p>7. Explain how to identify and manage signs and symptoms or stress, burnout and depression in oneself and others.</p>
Motor Vehicle	MOVR02 2	100%	0%	6	10	The Motor Vehicle Rescue module	1. Discuss various aspects that

Rescue						provides the student with the necessary knowledge, skills and techniques to extricate entrapped victims involved in land-based vehicle collisions. The module will focus on the fundamentals of vehicle anatomy and new car technology, collision trauma and the management of a vehicle accident. The techniques and equipment used to extricate patients will be dealt with in detail during this module.	influence provider, partner and scene safety during Vehicle Rescue operations. 2. Discuss vehicle anatomy and new car technology. 3. Explain the role, function, selection, use and maintenance of vehicle rescue tools and equipment. 4. Discuss the phased approach to vehicle rescue 5. Demonstrate the ability to function as part of a team in order to extricate a victim that had been entrapped as a result of a land-based vehicle collision safely and efficiently.
Physical Preparedness 1 and 2	PHPR01 1 PHPR02 2	100%	0%	5	2	It is important for a graduate paramedic to be physically capable of performing the daily tasks required of them. These tasks are by nature physical and require the emergency care provider to possess a baseline level of strength and fitness. The purpose of the physical preparedness module to provide students with the opportunity to obtain an acceptable level of physical fitness and swimming proficiency thus supporting them safely engaging in emergency care learning experiences and related environments.	1. Explain the important characteristics and components of a training programme 2. Define the components of fitness. 3. Describe the effect of attitude and psychological approach to exercise on performance 4. Demonstrate the baseline physical fitness and swimming proficiency.
Physiology 1	PHYS01 1	100%	0%	5	12	The module will enable students to gain the relevant physiological	1. Describe the basic applicable principals of chemistry and

						background applicable to Emergency Medical Care in the following topics: Physiological terminology, Chemistry for Physiology, Cell, Endocrine, Reproductive, Nervous, Cardiovascular, Respiratory, Urinary and Digestive systems, as well as Special senses.	cellular activities. 2. Describe the structure and the functions of the integumentary system and its associated appendages. 3. Describe the physiological mechanisms involved in movement. 4. Explain the physiological mechanisms of communication, integration and control of the nervous system. 5. Relate the structures and functions of the endocrine glands and reproductive organs to their functions. 6. Describe the anatomy and physiology of the circulatory system. 7. Describe the physiology of the respiratory system. 8. Relate the structure of the organs and accessory glands of the digestive system to their functions. 9. Describe the physiology of the urinary system.
Primary Health Care	PRHC02 2	100%	0%	6	6	The purpose of Primary Health Care (PHC) is to introduce the future Emergency Care Provider to the concept of holistic PHC as enshrined within the National Department of Health (NDoH) framework. Primary Health Care is concerned with the health of individuals as well as the greater	1. Discuss the historical background, context, declarations, foundation and principles that underpin Primary Health Care. 2. Define concepts and discuss various concepts related to understanding

						<p>community amongst which these paramedics may reside. Primary Health Care addresses all aspects of health within the community. These aspects include healthcare education, health promotion, access to healthcare as well as related issues such as community welfare, psychological wellbeing as well as the prevention of disease. This subject will begin by introducing the rationale behind the PHC concept and walk the student through various modules detailing PHC implementation. This subject is vitally important as it will allow students to appropriately identify and integrate theoretical concepts when involved in Work-Integrated Learning. Much of the qualified paramedics work will take place in the community where these PHC concepts are of utmost importance.</p>	<p>health and illness.</p> <p>3. Provide various definitions, discussions and explanations related to topics on prevention of ill-health.</p> <p>4. Provide various definitions, discussions and explanations related to topics on communicable and non-communicable diseases</p> <p>5. Provide various definitions, discussions and explanations related to topics on planning and health information systems</p> <p>6. Discuss health, human rights and ethics within the context of Primary Health Care</p> <p>7. Discuss the various factors that influence the future of primary health care</p> <p>8. Provide various definitions, discussions and explanations related to topics on community awareness and Primary Health Care education.</p>

							<p>characteristics that may either contribute or hinder effective teamwork and leadership in the rescue context.</p> <p>9. Demonstrate an understanding of the generic roles and responsibilities of a rescue team.</p> <p>10. Demonstrate an understanding of the cyclical nature of the phases and related activities involved in the management of rescue incidents.</p> <p>11. Demonstrate an understanding of the different incident management systems in South Africa and how the diversity of these systems may impact the management of incidents.</p> <p>12. Demonstrate an understanding of the terminology, principles, features, and framework of the Incident Command System.</p>
Rescue Technologies and	RTE01Y 1	100%	0%	6	15	The <i>Rescue Technologies and Equipment</i> module	1. Demonstrate an understanding

Equipment						<p>focuses identification, inspection, preparation, operation, maintenance and storage of equipment, vehicles and other resources required to provide safe and effective rescue services.</p>	<p>of some of the considerations when identifying and selecting rescue equipment.</p> <ol style="list-style-type: none"> 2. Demonstrate the ability to identify applicable legislation, standards, certifications, specifications and performance criteria of rescue equipment. 3. Demonstrate a basic understanding of factors that should be considered when selecting personal protective equipment. 4. Demonstrate an understanding of the different types of inspections and their importance when inspecting rescue equipment. 5. Demonstrate the ability to carry out an inspection of rescue equipment using the manufacturer's recommendations. 6. Demonstrate an understanding of the simple mechanics,
-----------	--	--	--	--	--	---	--

							<p>functioning and operation of an internal combustion engine</p> <p>7. Demonstrate an understanding of the simple mechanics, functioning and operation of a hydraulic system.</p> <p>8. Demonstrate an understanding of the simple mechanics, functioning and operation of a pneumatic system.</p> <p>9. Demonstrate an understanding of the principles, components, supply and operation of simple temporary electrical supply systems.</p>
Communications in the Rescue Environment	CRE01Y1	100%	0%	6	5	<p>The <i>Communications in the Rescue Environment</i> module provides the student with the skills and knowledge to identify, establish and operate wireless, remote, hard-wired, direct, or two-way Communication systems used for.</p>	<p>1. Describe the fundamental principles and concepts that underpin human communication.</p> <p>2. Identify and describe different types of communication and differences of approach.</p> <p>3. Demonstrate the knowledge and insights required to make use of a radio communication system in</p>

							<p>medical rescue contexts.</p> <p>4. Demonstrate the knowledge and insights required to make use of cellular and satellite communication in medical rescue contexts.</p> <p>5. Demonstrate the knowledge and insights required to make use of a computer-based web application / social media platforms in medical rescue contexts.</p> <p>6. Demonstrate the knowledge and insights required to make use of alternative Approaches to Communication in medical rescue contexts.</p> <p>7. Demonstrate the application of knowledge, skills and insights required to communicate professional and effectively during medical rescue training and operational contexts.</p>
High Angle Rescue	HAR01Y 1	100%	0%	7	15	The <i>High Angle Rescue</i> module focuses on the design, construction, application and analysis of rope rescue systems used to access,	<p>1. Describe and discuss the cyclical nature of the phases and related activities involved in the</p>

					<p>package, treat and extricate victims in a range of contexts including, urban, rural, industrial, wilderness and aquatic settings. Students completing this module should be able to demonstrate mastery of the theoretical principles, practical skills and related insights required to safely and effectively participate as a member of a rescue team in steep slope and high angle rescue contexts both in urban, rural and wilderness settings.</p>	<p>management of medical rescue incidents in a high angle rescue context.</p> <ol style="list-style-type: none"> 2. Identify and describe the concept of backup and redundancy and those components of a rope rescue system that can or should be backed up. 3. Build and operate redundant safety backup systems. 4. Correctly rig rope rescue systems to safely and efficiently access patients in a variety of rope rescue contexts 5. Safely and efficiently rig and operate systems for ascending and descending a rope. 6. Critically consider immediate and ongoing patient care considerations against the rescue environment and context you find yourself to make appropriate decisions relating to the
--	--	--	--	--	---	--

						<p>selection of stretcher and related packaging techniques.</p> <p>7. Engage with the patient and bystanders in a professional manner that enhances and addresses issues of patient comfort during a rope rescue operation.</p> <p>8. Safely and efficiently conduct patient packaging and stretcher rigging activities using different stretchers in a variety of rope rescue contexts.</p> <p>9. Competently and confidently function as a stretcher attendant / "jockey".</p> <p>10. Explain the principles and physics behind the generation of mechanical advantage in rope rescue contexts.</p> <p>11. Competently and confidently build and operate mechanical advantage system in rope rescue contexts.</p> <p>12. Describe the typical composition of</p>
--	--	--	--	--	--	--

						<p>a high angle rescue team and the generic sequence of activities and events associated with the management of a steep slope and high angle rope rescue incident.</p> <p>13. Effectively lead a team and / or participate as a team member in the management of steep slope and high angle rescue incidents.</p> <p>14. Describe the potential applications for suspension systems in medical rescue contexts.</p> <p>15. Describe considerations that should be considered when selecting anchor points for a sustention system and the effect that tensioning and loading the high wire has on the anchor points.</p> <p>16. Work as a member of a team to construct and operate a simple high wire and a compound suspension</p>
--	--	--	--	--	--	--

							<p>system.</p> <p>17. Explain the concepts, methods and approaches linked to lead climbing and how a cliff face may be ascended with a lead climber and a belayer.</p> <p>18. Identify and make use of devices for the anchoring of systems in wilderness settings.</p> <p>19. Confidently and competently participate in the high angle rescue operations in wilderness settings.</p>
Urban Rescue Operations	URO02Y 2	100%	0%	6	50	<p>The <i>Urban Rescue Operations</i> module provides the student with the cognitive ability, technical skills and capabilities necessary for the search, access, packaging and extraction of a victim from a structural, industrial, construction, confined space, domestic or transport related incident</p>	<p>1. Demonstrate the ability to identify rescue incidents that may occur within built structures and infrastructure, construction, industrial, transport and domestic related incidents within an urban setting.</p> <p>2. Demonstrate an understanding and the ability to analyse common hazards associated with built structures and infrastructure, construction, industrial, transport and</p>

							<p>domestic related incidents within an urban setting.</p> <p>3. Demonstrate the ability to safely, effectively, efficiently and correctly mitigate and control risks associated with hazards identified at built structures and infrastructure, construction, industrial, transport and domestic related incidents within an urban setting.</p> <p>4. Demonstrate the ability search for and safely access a victim/s at a variety of urban-related incidents using technical rescue equipment and techniques.</p> <p>5. Demonstrate the ability to assess, treat, package, and extract a victim/s from a state of entrapment at a variety of urban-related incidents.</p>
Rural and Wilderness Rescue Operations	RWR02Y 2	100%	0%	6	35	The <i>Rural and Wilderness Rescue Operations</i> module provides the student with the knowledge skills and insights required for safe and effective participation	<p>1. Identify and describe different types of maps including their construction, purpose and value for</p>

						<p>in search and rescue operations in wilderness, aquatic and aviation rescue contexts.</p>	<p>wilderness search and rescue activities.</p> <ol style="list-style-type: none"> 2. Correctly calculate and convert measured distances and predicted travel times on a map to corresponding times and distances in the real world. 3. Make use of direction and magnetic bearings together with a system of longitude and latitude coordinates to accurately plot, rationalize and report position and direction of travel. 4. Discuss the theory of search management and the associated underlying principles. 5. Use theories and principles of search management to inform logical decision making in the management of a simulated case (desktop) study or a search and rescue incident in a real-world setting. 6. Appreciate the fundamental

BACHELOR OF HEALTH SCIENCES IN EMERGENCY MEDICAL CARE (B9E01Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Anatomy 1	ANT01Y1	100%	0%	5	12	Anatomy provides foundational knowledge for pathology and clinically related subjects. The content included an introduction to anatomy and physiology, chemistry for anatomy and physiology, the cell, basic histology, the integumentary system, bone and joints, muscle, the nervous system and special senses, the endocrine system, blood and the cardiovascular system, and the respiratory, digestive, urinary and reproductive systems. This module aided in the development of a student competent in the clinical knowledge and skills required to provide specialised emergency medical care and rescue services to all sectors of the community.	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> • Give a detailed explanation of all the anatomical positions. • Give complete definitions and descriptions of all gross anatomical, osteological and histological terms related to anatomy. • Described and identify all body planes and body cavities. • Define body movements using correct anatomical terms. • Name two divisions of the skeletal system. • List the individual bones forming each division of the skeletal system. • Classify all the bones of the skeletal system. • List the characteristics and functions of epithelial tissue. • Name and describe the surface specializations (microvilli, cilia, flagella, stereocilia) of various epithelia and give their functions.

						<ul style="list-style-type: none"> • Describe the intercellular connections of epithelial tissue. • Identify, describe and name the location of the different types of epithelia. • Relate the structure of the different types of epithelia to the function they perform. • Describe glandular epithelium with regards to structure, function and location. • Describe the classification of connective tissue. • List and give the functions of the different types of cells, fibres and ground substance found in connective tissue. • For each type of connective tissue: identify it, describe its structure, describe where it is found in the body and relate its structure to its function in that location. • Explain how epithelial and connective tissues combine to form four different types of membranes and specify the functions of each. • Describe how connective tissue establishes the framework of the body. • For each type of muscle tissue: identify it, describe its structure, describe where it is found in the body and relate its structure to its function in that location. • Describe the connective tissue
--	--	--	--	--	--	--

						<p>sheaths related to muscle.</p> <ul style="list-style-type: none"> • Describe the relationship between muscle fascicles, muscle fibres, myofibrils, myofilaments and the banding pattern of skeletal muscle. • Describe the anatomical components of the nervous system. • Sketch and label the structure of a typical neuron, describe the functions of each component and classify neurons on the basis of their structure, function and location. • Differentiate between a nuclei and a ganglion. • Describe the anatomy of a synapse. • Describe the locations and functions of the various types of neuroglia. • Classify the joints according to their structure and give examples for each class. • Classify the synovial joints according to their structure. • List the characteristics of synovial joints. • Name the structures stabilizing the synovial joints. • Describe the movements taking place at each class of synovial joints. • Classify all bones of the axial skeleton. • Identify bones of the axial skeleton. • Give the correct anatomical alignment of all axial skeleton bones.
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Label the structures of the bones of the axial skeleton. • Label superficial muscles of the axial skeleton. • Classify all bones of the appendicular skeleton. • Identify bones of the appendicular skeleton. • Give the correct anatomical alignment of all appendicular skeleton bones. • Label the structures of the bones of appendicular skeleton. • Describe the following terms: <ul style="list-style-type: none"> ➤ Origin ➤ Insertion ➤ Action ➤ Agonist ➤ Antagonist ➤ Synergist • Name the skeletal muscles according to the following criteria: <ul style="list-style-type: none"> ➤ Fascicle organization ➤ Location ➤ Relative position ➤ Structure, size and shape ➤ Origin and insertion ➤ Action • Identify the following muscles of the axial skeleton: <ol style="list-style-type: none"> 1.Head and Neck <ol style="list-style-type: none"> i.Muscles of Facial expression <ul style="list-style-type: none"> ➤ Orbicularis Oris ➤ Epicranius ➤ Orbicularis Oculi ➤ Levator Palpebrae Superioris ➤ Platysma. ii.Extrinsic Eye Muscles <ul style="list-style-type: none"> ➤ Recti ➤ Obliques iii.Muscles of Mastication
--	--	--	--	--	--	--

						<ul style="list-style-type: none"> ➤ Masseter ➤ Temporalis ➤ Pterygoids. <p>iv. Muscles of the Tongue</p> <p>v. Muscles of the Pharynx</p> <p>vi. Muscles of the Larynx</p> <p>vii. Anterior Neck Muscles</p> <ul style="list-style-type: none"> ➤ Sternocleidomastoid ➤ Mylohyoid and digastric. <p>2. Muscles of the Vertebral Column</p> <ul style="list-style-type: none"> ➤ Trapezius ➤ Latissimus dorsi ➤ Erector Spinae. <p>3. Muscles of the Trunk</p> <ul style="list-style-type: none"> ➤ Intercostal muscles (External, Internal, Innermost) ➤ Diaphragm ➤ Anterior Abdominal muscles (Rectus Abdominus, Obliques, Transversus). <ul style="list-style-type: none"> • Identify the following muscles of the appendicular skeleton: <p>1. Muscles of the Shoulder and Upper limb</p> <p>i. Muscles that position the Pectoral Girdle</p> <ul style="list-style-type: none"> ➤ Trapezius ➤ Serratus Anterior ➤ Pectoralis Minor. <p>ii. Muscles that move the arm</p> <ul style="list-style-type: none"> ➤ Pectoralis Major ➤ Deltoid ➤ Supraspinatus ➤ Latissimus Dorsi. <p>iii. Muscles that move the Forearm, Hand and Fingers</p> <ul style="list-style-type: none"> ➤ Flexors of the forearm at the elbow: Biceps Brachii
--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ➤ Brachialis, ➤ Brachioradialis ➤ Extensor of the forearm at the elbow: Triceps Brachii ➤ Flexors of the hand at the wrist ➤ Extensors of the hand at the wrist ➤ Thenar Muscles ➤ Hypothenar Muscles ➤ Flexors and Extensors of the fingers at the Metacarpophalangeal joint <p>2. Muscles of the Pelvis and Lower Limb</p> <p>i. Muscles that move the Thigh</p> <ul style="list-style-type: none"> ➤ Gluteal Group ➤ Lateral Rotator Group ➤ Iliopsoas. <p>ii. Muscles that move the Leg</p> <ul style="list-style-type: none"> ➤ Flexors of the leg at the knee joint: Hamstrings. ➤ Extensors of the leg at the knee joint: Quadriceps femoris. <p>iii. Muscles that move the Foot and Toes</p> <ul style="list-style-type: none"> ➤ Dorsiflexors ➤ Plantarflexors ➤ Digital flexors ➤ Digital extensors. <ul style="list-style-type: none"> • Name the muscle or group of muscles innervated by the following nerve or plexuses: <ul style="list-style-type: none"> ➤ Oculomotor Nerve (Cranial Nerve III) ➤ Trochlear Nerve (Cranial Nerve IV) ➤ Trigeminal Nerve (Cranial Nerve V) ➤ Abducens Nerve (Cranial Nerve VI) ➤ Facial Nerve (Cranial Nerve VII)
--	--	--	--	--	--	--	--

						<ul style="list-style-type: none"> ➤ Glossopharyngeal Nerve (Cranial Nerve IX) ➤ Vagus Nerve (Cranial Nerve X) ➤ Accessory Nerve (Cranial Nerve XI) ➤ Hypoglossal Nerve (Cranial Nerve XII) • Describe the anatomical and functional divisions of the nervous system • Label a typical neuron and describe the functions of each component • Describe the structure of the synapse. • Classify neurons according to their structure and function • Describe the location and functions of neuroglia • Relate the structural components of the central nervous system to those of the peripheral nervous system • Discuss the structure and the function of the spinal cord • Describe the three meningeal layers that surround the central nervous system • Explain the roles of white and gray matter in processing and relaying sensory information and motor commands • Describe the components of a spinal nerve • Distinguish between motor and sensory distribution of spinal nerves • Relate the distribution pattern of spinal nerves to the regions they innervate. • Name the major regions of the brain and describe their functions
--	--	--	--	--	--	--

						<ul style="list-style-type: none"> • Name, locate the ventricles of the brain and describe the connection between them and the subarachnoid space • Explain five ways in which the brain is protected • Discuss the formation, circulation and functions of cerebrospinal fluid • Describe the external features of the medulla • Relate each of the nuclei to their specific function • Describe the structure of the pons • Describe the structure of the cerebellum • Describe the gross anatomical structure of the mesencephalon • List the different parts that form the diencephalon • Name the boundaries of the diencephalon • Name parts of the brain that forms the limbic system • Distinguish between the cerebral cortex and basal nuclei • Locate the sensory, motor and association areas of the brain and explain their functions • Identify the major integrative centres of the cerebrum • Comment on brain lateralisation • Describe the white matter and capsules of the brain • Name the cranial nerves • Name the foramina of the skull traversed by each cranial nerve. • Identify if the nerve is sensory, motor or mix • Relate the nerve to its function
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Explain what is meant by the somatic nervous system • Trace the path of the motor impulse from the brain to the organ • Trace the path of the sensory impulse from receptor organ to the brain • Describe the pathways of the somatic and autonomic nervous systems • Give an overview of the functions of the sympathetic and parasympathetic divisions of the autonomic nervous systems • Locate the sympathetic chain, collateral ganglia and suprarenal medullae and relate them to the structural organisation of the sympathetic division • Locate the different ganglia of the parasympathetic nervous system and relate them to the structural organisation of the parasympathetic division • Describe the location, structure, and functions of the pituitary gland, thyroid gland, parathyroid glands, suprarenal (adrenal) glands, pineal gland, thymus, pancreas, testes and ovaries. • Summarise the functions of each of the components of the human reproductive system • Distinguish between the primary and accessory structures in the male reproductive system • Name the ducts that receive and transport
--	--	--	--	--	--	---

						<p>sperm in the correct sequence</p> <ul style="list-style-type: none"> • Name the accessory glands of the male reproductive system • Describe the structure and histology of the testes • Outline the process of spermatogenesis • Describe the location and functions of the epididymis, ductus deferens, ejaculatory duct and urethra • Describe the secretions and functions of the seminal vesicles, prostate gland, and bulbourethral glands • Describe the composition of semen • Briefly describe the structure and functions of the external genitalia of the male • Distinguish between the primary and accessory structures in the female reproductive system • Locate and describe the structure of the ovaries • Outline the events of oogenesis • Distinguish the various parts of the uterine tubes • Relate functions of the uterine tubes to its histology • Describe the internal anatomy of the uterus • Describe the uterine wall • Briefly describe the structure and functions of the external genitalia of the female • Relate the structures of the mammary glands to their functions • Identify the components of the urinary system and describe the vital
--	--	--	--	--	--	---

						<p>functions performed by this system.</p> <ul style="list-style-type: none"> • Describe the structure of the kidneys. • Identify the major blood vessels associated with each kidney and trace the path of blood flow through the kidney • Describe the structure of the nephron, including the microanatomy of the renal corpuscle • Describe the structures and functions of the ureters, urinary bladder and urethra • Describe the primary functions of the respiratory system • List the components of the respiratory airways and describe the structural and functional classification of these components • Identify the organs of the respiratory system and describe their functions. • Describe the gross anatomy and histology of the following respiratory airways: nasal cavity, pharynx, larynx, trachea, bronchi, bronchioles and alveoli. • Describe the neural and local control of bronchiolar musculature. • Describe the macro- and microscopic anatomy of the lungs. • List the general functions of the digestive system. • Identify the organs of the digestive system and describe their major functions. • Describe the location of the peritoneal cavity, define the term retro-peritoneal and name
--	--	--	--	--	--	--

						<p>the retroperitoneal organs.</p> <ul style="list-style-type: none"> • Describe the functional histology of the digestive tract. • List and describe the mechanisms that regulate or control the activities of the digestive system. • Describe the anatomy and basic functions of the oral cavity, tongue, salivary glands, teeth and pharynx. • Describe the gross anatomy and histology of the oesophagus. • Describe the functions of the stomach. • Describe the anatomy of the stomach, including its histological features. • Describe the anatomical and histological characteristics of the small intestine. • Describe the structure and functions of the pancreas, liver and gallbladder, and explain how their activities are regulated and coordinated. • List the components of the circulatory system. • Describe the functions of the cardiovascular system. • Differentiate between arteries and veins in terms of their function. • Define the terms, pulmonary and systemic circuits and trace the flow of blood through these circuits. • Describe the general location of the heart. • List the four chambers of the heart and describe the main structural and functional differences between each one.
--	--	--	--	--	--	--

						<ul style="list-style-type: none"> • Describe the locations, structure and functions of the heart valves. • Identify the layers of the heart wall and describe the structure of each layer. • Identify the blood vessels which empty into and drain the heart. • Describe the nerve innervation of the heart wall. • Describe the blood supply of the heart wall. • Trace the flow of blood through the heart, identifying the pulmonary and systemic circuits, the main blood vessels, the heart chambers and the heart valves. • Identify the three layers that constitute the walls of most blood vessels. • Differentiate between arteries and veins in terms of their structure. • Compare the different types of blood vessels in terms of their structure and functions. • Define the term angiogenesis. • Identify the major systemic arteries and their locations. • Identify the major systemic veins and their locations. • Identify the skeletal landmarks of the head and neck. • Identify the triangles of the neck. • Identify the skeletal landmarks of the thorax. • Identify the planes/lines of the thorax. • Identify surface markings of the cavities and viscera of the thorax
--	--	--	--	--	--	---

							<ul style="list-style-type: none">• Identify the skeletal landmarks of the abdomen and pelvis.• Identify the planes/lines of the abdomen and pelvis.• Identify surface markings of the cavities and viscera of the abdomen and pelvis.• Identify the skeletal landmarks of the upper and lower limbs.• Identify the compartments, surface markings of muscles and vasculature of the upper and lower limbs.
Aquatic Rescue	AQR01Y3	100%	0%	6	12	<p>The aim of this module was to provide the student with the necessary skill, knowledge and insight needed to:</p> <ul style="list-style-type: none">• Function as an aquatic rescuer.• Perform a surface rescue of a patient in an aquatic rescue environment from a static body of water.• Rescue a victim from a swift water environment on their own or with a team• Move in and through a river in a safe and efficient manner.• Rescue a victim from swift water with the use of minimum resources.• Rescue a victim from swift water with the use of specialized equipment.	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none">• Discuss the construction, maintenance and correct use of the general items of aquatic rescue equipment as discussed• Explain the correct procedures for checking the listed items for serviceability• Correctly identify and make use of the listed items of aquatic rescue equipment.• Demonstrate the correct technique for checking and inspecting items of equipment for serviceability• Don and doff PFDs correctly• Correctly package a patient in the water• Throw a throw rescue bag to a patient 15 meters away• Discuss and describe the various methods of entering the water, approaching and securing the victim as

						<ul style="list-style-type: none"> • Use inflatable boats in swift water rescue. • Provide the students with the basic skills needed to work safely with and around small craft in the water. 	<ul style="list-style-type: none"> • well as towing and extracting the patient. • Explain the advantages, disadvantages and indications for any of the listed techniques. • Discuss methods of communicating under water • Swim 200 meters in 5 min or less • Swim a distance of 2000 meters (With the aid of a flotation device or PFD) • Tread water for 20 min • Swim down 4 meters (breath held) and retrieve a patient from the bottom • Approach and secure a panicked patient in the water • Tow an exhausted swimmer to the side • Remove a patient from the water • Demonstrate the correct entry methods • Function as a member of a breath held dive team to perform simple tasks under water • Swim a distance of at least 30 meters under water • Communicate adequately under water • Explain the differences between a dam and a lake and how the differences affect rescue operations • Discuss dangers that are associated with dams and lakes • Describe the common incidents that may occur near or on dams & lakes • Discuss the management of a surface rescue
--	--	--	--	--	--	---	---

						<ul style="list-style-type: none"> • Explain the common causes of drowning and near drowning • Explain in detail why a low head dam is such a dangerous area for swimmers and rescue activities • Draw and label a low head dam • Discuss the various methods of performing a low head dam rescue • Organise and manage a rescue from a dam or lake in a logical and efficient manner • Enter the water and swim out using both the torpedo boy as well as the line and reel • Demonstrate the self-help procedures for escaping from a low head dam or weir • Demonstrate the correct methods of searching shallow water for a submerged victim • Discuss the common causes for drowning in rivers • Discuss and describe the dangers associated with swift moving water • Discuss the environmental hazards associated with river rescue • Discuss swift water rescue philosophy • Discuss river safety • Discuss the importance of proper preplanning • Draw and label a typical river indicating the following features: <ul style="list-style-type: none"> ➤ Undercut banks ➤ Eddies ➤ Strainers ➤ Reversals
--	--	--	--	--	--	---

							<p>patients comprehensively, make accurate diagnoses and make sound clinical judgments that informs and validates decisions regarding patient care and treatment in the simulated environment.</p>
Emergency Medical Care 2 Theory	EMC01Y 2	100%	0%	6	12	<p>The Emergency Medical Care II Theory Module dealt with theoretical knowledge and principles that underpin the provision of medical care in the acute pre-hospital and emergency department settings. On completion, the student should be able to answer reasonably complex questions regarding the science that underpin pre-hospital emergency care. The student should also start to integrate principles of anatomy, physiology, pathology, diagnostics and professional practice to patient care. This module also aimed to equip the student with the knowledge of how to confidently and professionally interact with patients, make accurate diagnoses and sound clinical judgments that</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> • Airway management <ul style="list-style-type: none"> ◦ Discuss airway-related anatomy and physiology that is vital in acute care of adult patients. • List and elaborate on the four main categories of indications for endotracheal intubation. • Discuss the need for non-invasive manoeuvres to maintain oxygenation and ventilation • Describe the importance of pre-oxygenation prior to endotracheal intubation. • List the clinical features that may indicate a patient is in respiratory failure. • Discuss the adaptation of Salkes' triangle when deciding to intubate a patient. • How can presenting system physiology in the adult patient have an effect on determining the correct

						<p>informs and validates decisions regarding patient care and treatment.</p>	<p>course of action when deciding to intubate. (i.e.: hypotension)</p> <ul style="list-style-type: none"> • Differentiate between the objective and subjective methods of confirmation of ETT placement or location. • Compare the effectiveness of each of the devices used to confirm ETT placement. • Identify the potential complications that are associated with the commercial and non-commercial equipment used to secure an endotracheal tube • Provide an overview of the various filtration devices that can be attached to the ETT. • Discuss the effects of bag-valve-tube-resuscitator (BVTR) ventilation and identify potential complications that may occur during the procedure. • Explain the importance of non-invasive blood pressure (NiBP) monitoring pre- and post-intubation. • Identify and describe all the potential complications of endotracheal intubation. • Discuss the circumstances in which a patient may benefit from trachea-bronchial suctioning within the pre-hospital setting. • List and briefly explain the pathophysiology of each of the potential
--	--	--	--	--	--	--	--

						<p>complications associated with trachea-bronchial suctioning.</p> <ul style="list-style-type: none"> • Discuss the issue of sterility associated with performance of trachea-bronchial suctioning. • Differentiate between a 'difficult airway' and a 'failed airway' and elaborate on each of the components under each definition. • What are the dangers associated with multiple intubation attempts? • Elaborate on the various components of the 'encountered difficult airway' algorithm. • When should a practitioner decide to use an alternative, non-direct laryngoscopy intubating technique? • Capnography <ul style="list-style-type: none"> ◦ Review of the normal physiology of carbon dioxide production and its transportation within the body • Identify the two main types of capnographs; explain how they work and what limitations each may have. • Differentiate between capnography and capnometry • Describe the applications and limitations of the capnograph during airway management and ventilation of patients. • The numeric ranges and basic anatomy of the capnographic waveform. • Interpretation and analyses of readings and graphi waveforms.
--	--	--	--	--	--	--

						<ul style="list-style-type: none"> • Needle Thoracocentesis and Tension pneumothorax <ul style="list-style-type: none"> ◦ Review anatomical and physiological structures relating to a pneumothorax. • Correctly define and explain the pathophysiology of a tension pneumothorax. (TPT) • Differentiate between an 'evolving pneumothorax' and a 'tension pneumothorax.' • Explain the clinical signs when diagnosing a TPT in both awake and ventilated patients. • Compare the previous indications for a needle thoracocentesis with the current indications. • Elaborate on the recommendations for immediate needle thoracocentesis in the awake patient with a TPT. • Describe the potential complications and the causes of a failed needle thoracocentesis. • Beta-2 therapy and peak flow meter <ul style="list-style-type: none"> ◦ Review the anatomical structures of the lower airway. Review of respiratory dynamics and how they relate to the various described volumes.(predicted weight-based volumes) • An understanding of pathophysiology, clinical signs and diagnosis relating to the lower airway diseases: <ul style="list-style-type: none"> ◦ Bronchoconstriction
--	--	--	--	--	--	--

							<ul style="list-style-type: none"> ○ Bronchospasm ○ COPD ○ Bronchoedema ○ Decreased ciliary action ○ Mucous plugging • Discuss the use of the PEAK flow as an adjunct to the management of lower airway diseases. Interpretation of the results from the PEAK flow reading. • Review the pharmacological action, indications, • contraindications and adverse effects of beta-2 adrenergic stimulants. • Intravenous therapy and fluid management <ul style="list-style-type: none"> ○ Review the physiology of fluids and electrolytes and describe their movement within the various bodily compartments. • Discuss, categorise and/or differentiate between the various intravenous fluids commonly used in the emergency and critical care setting using the following headings: <ul style="list-style-type: none"> ○ Generic classes and/or trade names ○ Molecular structure and constituents ○ Tonicity and osmotic potential in relation to blood and tissue fluids ○ Indications and dosages ○ Metabolism, elimination and intra-vascular half-life ○ Contraindications, precautions and/or potential side effects. • Identify the indications for the establishment of
--	--	--	--	--	--	--	--

							<p>intravenous access and the choice of fluid and administration set.</p> <ul style="list-style-type: none"> • Describe the potential complications that may be associated with intravenous cannulation and the administration of fluid. • Discuss the physiological indicators that you would use to decide whether or not an infused volume of fluid is adequate for the patient's presenting condition. • Describe the strategies and end points of fluid resuscitation in the following categories of shock: <ul style="list-style-type: none"> ○ Cardiogenic ○ Haemorrhagic ○ Inflammatory (toxic and septic) • Identify the indications, contra-indications and complications of the pneumatic anti-shock garment. • Relate the use of the PASG as an adjunct for the treatment of specific forms of shock. • Electrocardiographic interpretation <ul style="list-style-type: none"> ○ Review of electrophysiology and the electroconductive system of the myocardium • Review of waveforms and features of the normal electrocardiogram and the clinical correlation • Basic concepts of arrhythmia <ul style="list-style-type: none"> ○ recognition ○ Artefact ○ Premature complexes ○ Escape complexes and rhythms ○ Ectopic foci and their morphologies
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ○ Aberrancy • Identification and interpretation of: <ul style="list-style-type: none"> ○ Sinus rhythms <ul style="list-style-type: none"> ▪ Normal sinus ▪ Sinus bradycardia ▪ Sinus tachycardia ▪ Sinus arrhythmia ▪ Sinus blocks, pauses and arrests ○ Atrial rhythms <ul style="list-style-type: none"> ▪ PAC ▪ Ectopic atrial rhythm ▪ Ectopic atrial tachycardia ▪ Ectopic atrial tachycardia with a block ▪ Wandering atrial pacemaker ▪ Multifocal atrial tachycardia ▪ Atrial flutter ▪ Atrial fibrillation ○ Junctional rhythms <ul style="list-style-type: none"> ▪ Premature junctional contraction ▪ Rapid junctional rhythms ▪ AV nodal re-entry tachycardia ▪ AV re-entry tachycardia ▪ Narrow complex tachycardia ○ Ventricular rhythms <ul style="list-style-type: none"> ▪ PVC ▪ Ventricular escape and idioventricular rhythms ▪ Ventricular tachycardia ▪ Polymorphic ventricular tachycardia and ▪ Torsades de Pointes ▪ Wide complex tachycardia ▪ Ventricular fibrillation and asystole
--	--	--	--	--	--	--	--

							<ul style="list-style-type: none"> ○ Atrioventricular blocks ○ Artificially paced rhythms ○ Electrolyte imbalances • Components and clinical correlation of the 12 lead ECG • The calculation, identification and importance of the electrical axis • Identification and interpretation of the following using a 12 lead electrocardiogram <ul style="list-style-type: none"> ○ Bundle branch blocks ○ Hypertrophy ○ Acute myocardial infarction • Apply your knowledge of coronary circulation and anatomical structures within the myocardium to waveforms presented in acute coronary syndromes • Temperature related emergencies <ul style="list-style-type: none"> ○ Describe the normal physiology of temperature regulation in a healthy adult ○ identify the physiological components of different co-morbidities that will have an effect on normal temperature regulation in that acutely ill or injured patient ○ Discuss the risk factors, pathophysiology, patient assessment, findings and management of the following
--	--	--	--	--	--	--	--

							<p>hyperthermic conditions</p> <ul style="list-style-type: none"> ▪ Heat cramps ▪ Heat exhaustion ▪ Heat stroke <ul style="list-style-type: none"> ○ Discuss the risk factors pathophysiology, patient assessment, findings and management of the following hyperthermic conditions <ul style="list-style-type: none"> ▪ Mild hypothermia ▪ Moderate hypothermia ▪ Severe hypothermia ▪ Frostbite ○ explain the phenomenon of wind chill. <ul style="list-style-type: none"> • Submersion emergencies <ul style="list-style-type: none"> ○ Explain the pathophysiology of drowning ○ Discuss the factors that may affect the clinical outcome and prognosis of the patient who has been submerged ○ Explain how you would manage a patient that has been submerged • Blasts and Ballistics <ul style="list-style-type: none"> ○ Explain the meaning of the term cavitation as it applies to gunshot wounds and penetrating trauma and identify the relevance that it has to a practitioner ○ Describe the factors that affect the type of injury and the amount of damage caused by the bullet
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ○ Discuss the management of a patient who has sustained a gunshot wound and the effect the injury has on various bodily systems. • Toxicology <ul style="list-style-type: none"> ○ Provide an adequate definition for toxicology. ○ Describe the routes of exposure that a toxin may enter the body. ○ Consider the important items that will need to be addressed when taking a targeted history for the poisoned patient. ○ Relate the clinical findings, during the examination of the poisoned patient, to the recognised toxidromes to assist with the diagnosis. ○ Discuss the general treatment principles of the following toxins: <ul style="list-style-type: none"> ➤ Alcohol ➤ Heroin and Opioids ➤ Cocaine and stimulants ➤ Benzodiazepines and sedatives ➤ Acetyl salicylic acid ➤ Paracetamol ➤ Tricyclic Antidepressants ➤ Calcium Channel and Beta-blockers ➤ Organophosphates ➤ Carbon Monoxide
--	--	--	--	--	--	--	--

							<ul style="list-style-type: none"> ○ Discuss the available resources where you can get information on toxins. ○ Provide an overview of substance abuse in patients dependent on licit and illicit drugs and alcohol. • Behavioural emergencies • Explain when abnormal behaviour requires medical intervention and discuss the medico-legal implications as depicted by the Mental Health Act of South Africa. • Describe the causes of abnormal behaviour under <ul style="list-style-type: none"> ▪ the following headings: <ul style="list-style-type: none"> ➤ Biological/organic ➤ Psychosocial ➤ Sociocultural ➤ Psychopathology • Classify psychiatric signs and symptoms to the various behavioural disorders. • Describe the general principles of assessment and management of a demonstrating abnormal behaviour. • Demonstrate an understanding of the following disorders: <ul style="list-style-type: none"> ○ Anxiety disorders ○ Mood disorders ○ Personality disorders ○ Eating, impulse control and substance-related disorders ○ Psychosis • Describe your approach to hostile
--	--	--	--	--	--	--	---

							and violent patients and discuss the difference between physical and chemical restraint.
Emergency Medical Care 3 Practical	EMC02Y 3	100%	0%	7	12	<p>The aim of Emergency Medical Care – Practical was to provide the student with the opportunity to practice how to manage patients suffering from injuries and illnesses in a controlled, safe environment. During this module, the student had the opportunity to practice how to integrate all of the theoretical aspect and underpinnings of emergency care into actually managing patients. Simply put, this allowed the student to move from knowing what to do, to practicing how to do it.</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> • Successful performance of the following procedures: <ul style="list-style-type: none"> ➤ Visual nasal intubation ➤ Oral endotracheal intubation with induction ➤ Bag-valve-tube nebulization ➤ Upper airway obstruction with the use of equipment ➤ Needle cricothyroidotomy ➤ Surgical cricothyroidotomy ➤ Nasogastric intubation ➤ Orogastric intubation ➤ The use of a transport ventilator in the pre-hospital environment for primary response ➤ Vagal maneuvers ➤ Synchronized Cardioversion ➤ Transcutaneous pacing ➤ Intra-osseous cannulation ➤ External jugular vein cannulation ➤ Femoral vein cannulation ➤ Drug administration – intramuscular ➤ Drug administration – intravenous ➤ Drug infusion preparation ➤ Management of a prolapsed cord

						<ul style="list-style-type: none"> • Demonstrate procedural competence in performing a Rapid Sequence Intubation. • Demonstrate correct application of RSI and difficult airway algorithms and protocols using adult and paediatric patient simulators in a scenario based environment • Demonstrate rapid and accurate airway assessment on patients using adult and paediatric patient simulators in a scenario based environment • Assemble and set up equipment and prepare a patient for RSI using adult and paediatric patient simulators in a scenario based environment • Select the appropriate induction and neuromuscular blocking agents in a simulated environment • Perform a rapid sequence of induction, neuromuscular blockade and endotracheal intubation in a simulation assessment. • Demonstrate rapid and accurate assessment of endotracheal tube placement post-intubation using adult and paediatric patient simulators in a scenario based environment • Manage a patient appropriately post-
--	--	--	--	--	--	---

							<p>RSI with regard to securing of the endotracheal tube, management of post-intubation hypotension, longer term sedation and neuromuscular blockade using adult and paediatric patient simulators in a scenario based environment.</p> <ul style="list-style-type: none"> • Document accurately all clinical and event data relevant to an RSI performed using adult and paediatric patient simulators in a scenario based environment • Manage simulated adult patients suffering from a variety of injuries and illnesses commonly found in the pre-hospital setting to an Emergency Care Practitioner scope of practice • Correctly select and utilize the emergency medical equipment in the patient simulations. • Demonstrate an ability to communicate with patients and crew in a professional and ethical manner during the patient simulations. • Correctly assess, diagnose and manage patients suffering from injuries and illnesses commonly found in the pre-hospital setting according to your scope of practice.
Emergency Medical Care 3 Theory	EMC01Y 3	100%	0%	7	12	Emergency Medical Care III is considered to be one of the core modules in the	Throughout completion of this module, the following learning outcomes were achieved:

					<p>EMC programme. This was the module where the student got the opportunity to apply all of the knowledge and skills gained from the first two years of academic experiences into the management of adult patients. The student should be competent to manage any adult patient to the same extent of a qualified ECP by the end of this year. The aim of Emergency Medical Care – Theory was to provide the student with the contextual knowledge and content that they should use to guide decision making when dealing with patients. The bulk of the work in this module was putting concepts learnt in Anatomy, Physiology, Diagnostics, General Pathology, EMC II and Pharmacology together and then applying this existing knowledge and understanding to properly assess, diagnose, and treat ill and injured patients.</p>	<ul style="list-style-type: none"> • List and explain the indications and contraindications for a needle cricothyroidotomy. • Discuss the advantages and disadvantages that are associated with needle cricothyroidotomy. • Describe the complications associated with performing this skill. • List and explain how you would prepare and inspect the equipment needed to perform a needle cricothyroidotomy. • Explain in detail the limitations associated with a needle cricothyroidotomy specifically in adult patient. • Discuss the different ways to overcome these limitations. • List and explain the indications and contraindications for a surgical cricothyroidotomy. • Discuss the advantages and disadvantages that are associated with a surgical cricothyroidotomy. • Describe the complications associated with performing this skill. • List and explain how you would prepare and inspect the equipment needed to perform a surgical cricothyroidotomy. • Provide a detailed description of the actual procedure (technique utilized) taking into account the use of a scalpel as
--	--	--	--	--	---	---

						<p>well as sharp pointed scissors.</p> <ul style="list-style-type: none"> • List and explain the indications and contraindications for orogastric and nasogastric intubation. • Discuss the complications associated with performing this skill in both an awake and an unconscious patient. • List and explain how you would prepare and inspect the equipment needed to perform a nasogastric / orogastric intubation. • Write a detailed step-by-step approach detailing the technique utilized to perform a nasogastric / orogastric intubation in both a conscious and unconscious patient. • Explain pressure controlled ventilation versus volume controlled ventilation • Discuss the indications for mechanical ventilation • Discuss the complications that may be caused by mechanical ventilation • Discuss the following concepts when dealing with mechanical transport ventilators: <ul style="list-style-type: none"> ➤ Controlled mechanical ventilation ➤ Assist / control mode ➤ Synchronized intermittent mandatory ventilation ➤ Intermittent positive pressure ventilation
--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ➤ Synchronized intermittent positive pressure ventilation ➤ Pressure support ventilation ➤ Continuous positive airway pressure ➤ Tidal volume ➤ Minute volume ➤ Respiratory rate ➤ Peak airway pressure ➤ Sensitivity ➤ Pressure limit ➤ Fraction of inspired oxygen ➤ Positive end expiratory pressure ➤ Inspiratory-to-expiratory ratio • Explain in a logical fashion, how to set up a transport ventilator using blood gas values • Explain how to manipulate ventilator settings according to blood gas values • Troubleshoot when encountering problems during mechanical ventilation • Discuss ventilation strategies during special situations • Discuss how you would determine whether a patient with a bradycardia is stable or unstable • List and explain the causes of a bradycardia • Provide a detailed explanation as to the treatment regime you would elect to follow in managing an unstable bradycardia (include all variants) • Describe the different types of pacemakers (permanent and
--	--	--	--	--	--	--	--

						<p>temporary) that are available.</p> <ul style="list-style-type: none"> • Discuss in detail the physiological effects of pacing. • Explain the advantages of transcutaneous pacing. • List and explain the indications and contraindications of pacing. • Discuss the complications associated with pacing. • Differentiate between asynchronous and synchronous pacing modes. Be sure to include the advantages and disadvantages associated with each mode. • Provide a detailed step-by-step approach to transcutaneous pacing. • Clarify what is meant by the terms overdrive and underdrive pacing. • Explain the procedure that would need to be followed in order to either underdrive or overdrive pace a patient. • Argue the current value of underdrive pacing in the pre-hospital environment. • Discuss how you would determine whether a patient with a tachycardia is stable or unstable? • Differentiate between a physiological and a pathological tachycardia. • Provide a detailed explanation as to the treatment regime you
--	--	--	--	--	--	---

						<p>would elect to follow in managing the following tachycardias (include all variants):</p> <ul style="list-style-type: none"> ➤ Regular narrow complex tachycardias: <ul style="list-style-type: none"> ○ Sinus tachycardia ○ Reentry supraventricular tachycardia ➤ Wide complex tachycardias ➤ Irregular tachycardias: <ul style="list-style-type: none"> ○ Atrial flutter ○ Atrial fibrillation ○ Polymorphic ventricular tachycardia ○ Torsades de Pointes • List and discuss the vagal manoeuvres commonly used by Emergency Care Practitioners. • Valsalva manoeuvre: <ul style="list-style-type: none"> ➤ Provide a detailed explanation as to how the valsalva manoeuvre accomplishes a slowing of the heart rate. ➤ Describe in detail the various techniques that may be utilized to assist your patient in performing a valsalva manoeuvre. ➤ Discuss the steps that need to be followed in preparation for a valsalva manoeuvre as well as during the actual procedure. • Carotid Sinus Massage: <ul style="list-style-type: none"> ➤ Provide a detailed explanation as to

Fire Search & Rescue 1	FSR01Y 2	100%	0%	6	12	<p>The purpose of this module was to provide the student with the skills and knowledge for incidents involving victims that need to be searched for and rescued from incidents involving oxygen deprived environments in smoke and heat-filled compartments. This module highlighted basic fire behaviour and it's dynamics as well as the equipment that is used on the fireground. The major focus of the module was the use of self-contained breathing apparatus and deployment for search and rescue.</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> • Fire dynamics and fire behavior <ul style="list-style-type: none"> ○ Discuss the physical and chemical changes of matter. ○ Define the following terms relating to the science of fire: <ul style="list-style-type: none"> ▪ Fire triangle ▪ Fire tetrahedron ▪ Combustion ▪ Heat ▪ Vaporisation ▪ Flash point ▪ Fire point ▪ Ignition temperatures ▪ Pyrolysis ○ Discuss the ways in which heat is transferred. ○ List the sources of heat energy. ○ List the products of combustion.

							<ul style="list-style-type: none"> ○ Explain how fires are classified. ○ Differentiate between fuel controlled and ventilation controlled fire development. ○ Describe the phases/stages of fire in a compartment. ○ Define the following terms relating to the growth stage of fire in a compartment: <ul style="list-style-type: none"> ▪ Thermal layering ▪ Rollover ▪ Flashover ○ Describe the formation of a backdraft in a compartmental fire. ○ Explain the factors that influence the development of fire within a compartment. ○ Discuss the principles in which a fire can be controlled. ○ Identify the commonly used extinguishing agents. • Personal protective equipment used for fire search and rescue <ul style="list-style-type: none"> ○ Identify the points that should be taken into consideration when choosing the following items for fire search and rescue: <ul style="list-style-type: none"> ▪ Helmet ▪ Protective hood ('flashhood') ▪ Hearing protection
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ▪ Eye protection ▪ Protective turnout coat and trousers (Bunker gear) ▪ Protective footwear ▪ Protective handwear ▪ Personal Alert Safety System (PASS) device ○ Explain how you would care for, and maintain all the aforementioned items. ○ Explain reasons for using respiratory protection during fire search and rescue. ○ Describe the limitations of the various breathing apparatus with regard to: <ul style="list-style-type: none"> ▪ Limitations of the wearer ▪ Limitations of the equipment ▪ Limitations of the air supply ○ Identify the various types of breathing apparatus: <ul style="list-style-type: none"> ▪ Open-circuit Self Contained Breathing Apparatus (SCBA) ▪ Open-circuit Airline ▪ Closed-circuit Breathing Apparatus ○ Describe the function of each of the components of an SCBA. (incl mask) ○ List the areas that should be checked during a daily visual inspection of an SCBA. ○ Describe the following terms in
--	--	--	--	--	--	--	--

							<p>relation to high pressure vessels.</p> <ul style="list-style-type: none"> ▪ Pressure ▪ Volume ▪ Flow <ul style="list-style-type: none"> ○ Calculate air consumption of the wearer of an SCBA. ○ Calculate the estimated duration on air of the wearer of an SCBA. ○ Explain the factors that will affect air consumption of the wearer of an SCBA. ○ List the steps that should be followed in emergency situations while using an SCBA. ○ Discuss the dangers associated with 'skip breathing'. ○ Explain the process of hydrostatic testing with regards to high pressure vessels used with the SCBA. ○ Briefly explain how air is compressed using a 3-stage compressor unit. ○ List the precautionary safety measures that should be adhered to when using a compressor. ○ Discuss what considerations need to be taken when using a portable compressor in an outdoor location. ○ List the considerations that need to be taken when storing pressure vessels.
--	--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Search and rescue techniques on the fireground <ul style="list-style-type: none"> ○ Explain what is meant by 'risk vs. benefit' on the fire ground. ○ Identify the various building types with regard to their construction and layout. ○ Discuss the associated dangers that the different building components may pose to a search and rescue team during a fire. ○ List the factors that should be considered when determining the potential for a structure to collapse during a fire. ○ List the indicators of potential or imminent collapse during a fire. ○ Explain how a collapse zone is determined on the exterior of the building. ○ Explain the considerations of 'occupancy' when engaging in search and rescue. ○ Explain what should be considered when doing a 'scene size-up.' ○ List the 'search-safety' guidelines that need to be adhered on the fireground. ○ Discuss the common occupant behaviour of the following victim types in a fire:
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> ▪ Adults ▪ Children ▪ Babies ▪ Elderly persons ▪ Animals <ul style="list-style-type: none"> ○ List the information that should be gathered from residents/neighbours that are found on the fireground. ○ Explain the principles of BA Command and Control. ○ Explain the procedure for the control of a 'rapid-deployment' search and rescue team. ○ Identify the various types of communication that can be used during fire search and rescue operations. ○ Explain the use of personnel lines used during searches. ○ List the priorities of a Primary Search. ○ Differentiate between a Primary and Secondary Search. ○ Explain what should be considered when searching a multi-storey building. ○ Describe the function of a rapid intervention team. (RIT) ○ List the circumstances/conditions when a patient must be moved to safety, before they receive treatment, once located during the search.
--	--	--	--	--	--	--

						<ul style="list-style-type: none"> • Structural access techniques <ul style="list-style-type: none"> ○ Define 'forcible entry' as it is applicable to the Fire Brigade Act. ○ List the four basic categories of forcible entry tools. ○ Understand the association between specific tools and special forcible entry needs. ○ List the items to look for when 'sizing-up' at door for potential forcible entry. ○ Describe the basic construction of a typical door. ○ Describe the basic construction of a typical window. ○ Describe the basic construction of a typical wall. ○ List the hazards associated with forcible entry. ○ Identify the different parts of a ladder. ○ List the precautions that you need to take before raising a ladder • Ventilation on the Fireground <ul style="list-style-type: none"> ○ Describe reasons that you would ventilate on a fireground. ○ List the hazards that could be in a building or compartment with accumulated smoke and gas. ○ Identify the considerations that affect the decision to ventilate.
--	--	--	--	--	--	--

							<ul style="list-style-type: none"> ○ Define 'vertical' ventilation. ○ Define 'horizontal' ventilation. ○ List the warning signs of an unstable roof. ○ Differentiate between positive pressure ventilation (PPV) and negative pressure ventilation (NPV) ○ List the disadvantages of hydraulic ventilation. ● Fire fighting equipment <ul style="list-style-type: none"> ○ Classify the various types of portable fire extinguishers. ○ Explain the care and maintenance of a portable fire extinguisher. ○ Identify different types of portable smothering devices. ○ Identify different types of hydrants. ○ Explain how to locate a hydrant. ○ Discuss the fundamentals of water supply to the fireground and fire source. ○ Identify the different hose construction. ○ Identify the different hose couplings. ○ Identify the meaning of voice and signal commands relating to the use of hose on the fireground. ○ Identify different types of branches used.
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ○ Explain the function of the different streams that are created by various branches. ○ Explain how foam is generated. ○ List the reasons for the use of foam. ○ Identify different aerial appliances that may be found on the fireground. ○ Explain the value of aerial appliances which can be used for search and rescue operations. ● Practical skills outcomes <ul style="list-style-type: none"> ○ Act in a safe manner during all fire search and rescue training scenarios. ○ Correctly don and doff all PPE used for fire search and rescue. ○ Stage an area for all fire search and rescue equipment during training. ○ Fulfil the role of each member within a fire search and rescue team. ○ Correctly assemble an SCBA to be used for search and rescue. ○ Correctly carryout pre-use check all components of the SCBA including: <ul style="list-style-type: none"> ▪ Visual inspection ▪ High pressure test ▪ Low pressure test ▪ Negative pressure test of the mask ▪ Positive pressure leak
--	--	--	--	--	--	--	--

							<ul style="list-style-type: none"> test of the mask <ul style="list-style-type: none"> ▪ Demand valve test ▪ Purge valve test ○ Correctly don and doff the SCBA using different techniques. ○ Care and maintain all the SCBA components. ○ Fulfil the roles and responsibility of an Entry Control Officer. ○ Correctly manage a BA tally board. ○ Correctly use a SCBA under the following conditions: <ul style="list-style-type: none"> ▪ Areas of limited visibility for more than 15min ▪ Pass through dimension-restricted areas ▪ Carryout tasks in hot and oxygen deprived compartments ▪ Search for victims and objects in limited visibility ▪ Rescue victims using different drag and carry techniques ▪ Complete an obstacle course to simulate barricades, restrictions and difficulty of equipment. ▪ While carrying out forcible entry tasks.
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ▪ Working on ground ladders. ○ Follow the recommended actions during emergency situations caused by SCBA malfunctions. ○ Use a hose line to exit a building by identifying the couples. ○ Conduct a primary search. ○ Conduct a secondary search ○ Conduct a search using a tag/personnel line. ○ Conduct a search for a victim in a limited visibility area using the left/right hand rule. ○ Correctly mark an area that has been searched using recognised methods. ○ Correctly manage a conscious victim once they have been located and assist them to safety. ○ Correctly move an unconscious patient using the following techniques: <ul style="list-style-type: none"> ▪ Incline drag ▪ Blanket drag ▪ Webbing drag ▪ Cradle-in-arms lift/carry ▪ Seat lift/carry ▪ Three person lift/carry ▪ Extremities lift/carry ▪ Chair lift/carry ▪ Litter carry ▪ Spineboard / Scoop stretcher carry
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ○ Force entry using the appropriate tool through: <ul style="list-style-type: none"> ▪ Outward and inward swinging doors ▪ Different windows ▪ Burglar bars and gates ▪ Roller shutter doors ▪ Padlocks ▪ Electric gates ○ Care and maintain all forcible entry tools ○ Use the following techniques to carry and move a ground ladder: <ul style="list-style-type: none"> ▪ One fire-fighter low shoulder ▪ Two fire-fighter low shoulder ▪ Three fire-fighter flat shoulder ○ Correctly tie a halyard of a ground ladder. ○ Correctly raise and lower the following ladders: <ul style="list-style-type: none"> ▪ Single ladder ▪ Extension ladder ○ Correctly pivot and shift a ladder ○ Perform a 'leg lock' while carrying out a task on a ground ladder ○ Assist a conscious victim down a ladder. ○ Remove an unconscious victim down a ground ladder ○ Using a ladder to access an area to be searched carrying an appropriate forcible entry tools.
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ○ Correctly operate a portable fire extinguisher. ○ Correctly locate and operate a standpipe hydrant system in the correct manner. ○ Connect a hose line with the following coupling: <ul style="list-style-type: none"> ▪ NST ▪ Instantaneous ▪ Storz
Foundations of Professional Practice	FPP01Y1	100%	0%	5	12	<p>In order to function effectively as a professional emergency care provider it is important to recognise that there exists an additional body of knowledge, skills and insights apart from that which can be directly linked to the clinical management of the ill or injured patient. As the student worked through this module, they were exposed to this important area of emergency care practice that is often taken for granted. The aim of this module was thus to enable the student to function effectively and professionally within an emergency health care system or structure.</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> • Identify the aims of the National Health system, and discuss the shortfalls and potential solutions with regard thereto. • Elaborate on the terms below: <ul style="list-style-type: none"> ➢ Batho Pele Principles ➢ Patients' Right Charter ➢ Constitution • Identify the relevant role players in the National Health system that are responsible to ensure that the requirements of the Constitution, Batho Pele and the Patients' Right Charter reach the client. • Identify positions within an organogram of: <ul style="list-style-type: none"> ➢ The National Department of Health ➢ A Provincial EMS ➢ A Local Authority EMS • Briefly discuss the roles of the following people: <ul style="list-style-type: none"> ➢ Minister of Health ➢ MEC of Health

						<ul style="list-style-type: none"> • Highlight the problems and benefits with regard to a strong developing private health sector. • Identify the various health establishments • List the functions of the health establishments at each level • Describe the function of each health establishment. • List the different levels of Trauma Centre accreditation as outlined by the Trauma Society of SA. • Describe the criteria which make up each accredited level. • Describe the benefits of such a system. • Identify positions within an organogram of: <ul style="list-style-type: none"> ➤ A major tertiary health establishment • List the objectives of ambulance services as outlined in the Gauteng Ambulance Services act. • Explain how the various acts and regulations came into being. • Explain the importance and purpose of an act. • Explain how acts are amended. • Discuss the procedure that is followed when two acts are in conflict. • Explain the role and function of the Health Professions Council of South Africa (HPCSA). • Discuss the relationship between the Professional Board of Emergency
--	--	--	--	--	--	---

						<p>Care (PBEC) and the HPCSA</p> <ul style="list-style-type: none"> • List the sub-committees within the PBEC • Explain the importance of reporting malpractice to the HPCSA. • Discuss the procedures you should follow if you are accused of malpractice • Define the legal terminology below: <ul style="list-style-type: none"> ➢ Consent ➢ Malpractice ➢ Negligence ➢ Confidentiality and Privacy ➢ 'Reasonable Man' Test ➢ Abandonment ➢ Slander and defamation ➢ Liability ➢ Beneficence ➢ Non-maleficence • Discuss ethical and moral behaviour when practicing as an emergency care practitioner • Discuss the importance of personal presentation in the emergency care environment. • Explain the importance of anti-discriminatory practice. • Explain how a practitioner takes cultural diversity and language into account when managing incidents and dealing with a diverse range of patients. • Provide a definition of clinical governance. • Provide a definition of clinical auditing.
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Explain the purpose of evidence-based practice • Explain the importance of continued medical education and professional development • Define communication • Differentiate between verbal and non-verbal communication • Interpret the 'Model of Interpersonal Communication' • Identify the various types of emergency vehicles. • List the specific vehicle requirements, which are stipulated by the Board of Healthcare Funders, that need to be satisfied in order to register an ambulance with the organisation. • Describe the purpose of the licence disk and operator card which needs to be displayed on the windscreen of an emergency vehicle. • Discuss the sections of the road traffic act that deal with: <ul style="list-style-type: none"> ➤ Responding to an incident ➤ Stopping at the incident • Describe the steps to navigate to the location of an incident using a map book. • Describe the steps to navigate to the location of an incident using a GPS. • Identify a safe area to stop your vehicle at the scene of an incident. • Demonstrate how to use your vehicle to

Industrial & Agricultural Rescue	IAR01Y2	100%	0%	6	3	<p>This module provided the student with the necessary knowledge, skills and techniques to access and extricate entrapped victims involved in machinery, equipment and vehicles found in the rural agricultural and industrial environments. The module focused on the unique situations that are found in the various sectors of industry and in agriculture. The majority of the rescue equipment used to extricate patients had been dealt with in previous sections so it was not discussed in detail in this module.</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> ○ Identify the various types of vehicles and machinery found in the industrial and agricultural environments. ○ Identify the potential emergency scenarios that may occur with the some of the basic anatomy of vehicles and machinery found in the industrial and agricultural environments. ○ List the questions that should be asked when carrying out an initial size-up of an industrial or agricultural incident. ○ Discuss the considerations for industrial and agricultural vehicle stabilisation under the following headings: <ul style="list-style-type: none"> ○ Vehicle upright ○ Vehicle on its side ○ Vehicle upside down ○ Vehicle in other positions ○ Explain ways of gaining access into industrial and agricultural rescue vehicles. ○ Discuss incidents related to the 'Power-take-off' system found the agricultural environment. ○ Discuss the importance of a pre-incident planning for industrial and agricultural machinery extrication incidents.
----------------------------------	---------	------	----	---	---	---	--

							<ul style="list-style-type: none"> ○ Explain the importance of using lock-out/tag-out devices. ○ Discuss the primary and secondary assessments that are carried out during Phase I (Assessment on Arrival) of an industrial and agricultural incident. ○ Discuss Phase II (Pre-extrication Operations) at an industrial and agricultural incident under the following headings: <ul style="list-style-type: none"> ○ Monitoring patient status ○ Finalising incident action plan ○ Gathering resources ○ Monitoring the atmosphere ○ Ventilation considerations ○ Lighting ○ Communications ○ List the four major factors that need to be considered during Phase III (Machinery Extrication Operations) at an industrial and agricultural incident. ○ Discuss ways in which a machine can be stabilised. ○ Identify ways in which to isolate energy sources of a machine. ○ Explain what is meant by the term 'manipulative extrication' at industrial and agricultural incidents. ○ Discuss the approach to disassembling a
--	--	--	--	--	--	--	---

							<p>machine for the extrication of a patient at an industrial and agricultural incident.</p> <ul style="list-style-type: none"> ○ Discuss the use of force to manipulate components of a machine for the extrication of a patient at an industrial and agricultural incident. ○ List the considerations that should be taken when terminating an industrial and agricultural incident. ○ Explain the correct management of an incident involving an escalator ○ Discuss the dangers associated with elevator / lift rescues ○ Label the main components of an elevator system ○ Explain how to disable and lock out an elevator ○ Explain the correct methods for gaining access to a lift between floors ○ Explain the general management of a rescue from a lift shaft ○ Discuss the management of an incident involving a child who has become trapped between the burglar bars of a house ○ Discuss the management of an incident involving pool weirs and pumps ○ Discuss the dangers associated with electrically operated doors and gates ○ Explain the general management
--	--	--	--	--	--	--	--

							<p>principles of dealing with a person who has become trapped by an electrically operated door or gate</p> <ul style="list-style-type: none"> ○ Discuss the general management of a chemical spill or leak in a rural area ○ Discuss the dangers associated with grain storage silos and bins ○ Explain the management of an incident where a patient has become buried under the grain in a silo or bin.
Intensive and Specialized Care	EMC01Y4	100%	0%	8	12	<p>The purpose of studying Intensive & Specialised Care was to develop and demonstrate the following broad outcomes on the culmination of the student's learning activities:</p> <ul style="list-style-type: none"> ○ Discuss the basic principles and approaches to assessing, preparing and transferring a critically ill or injured patient in a mobile ICU. ○ Demonstrate correct and appropriate usage and problem solving with regard to monitoring and other equipment used during ICU transfers. ○ Explain the rationale for, the possible complications of and the various approaches to thrombolysis in 	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <p>General</p> <ul style="list-style-type: none"> • Discuss the functioning and need for intensive care units (ICUs) and factors determining the need for transfer from one ICU to another. <p>Ventilation</p> <ul style="list-style-type: none"> • Discuss the indications for and purpose of mechanical ventilation. • Differentiate between volume-, pressure- and time-cycled ventilation and describe the advantages and disadvantages of each. • Explain and compare the different modes of mechanical ventilation including intermittent mandatory ventilation (IMV), continuous mandatory ventilation

						<p>the pre-hospital environment.</p> <ul style="list-style-type: none"> ○ Critically discuss the evidence for pre-hospital thrombolysis. ○ Describe the causes, pathophysiology and clinical features of a broad range of diving-related emergencies. ○ Critically discuss and defend various management approaches for the diving-related emergencies mentioned above. ○ Discuss the possible stresses, complications and risks of transporting critically ill or injured patients by air as well as the advantages and disadvantages of doing this. ○ Describe the general management of critically ill or injured patients during air transportation and characteristics of various types of aircraft used for this purpose. 	<p>(CMV), synchronised intermittent mandatory ventilation (SIMV), pressure support ventilation (PSV), biphasic positive airway pressure (BIPAP), bi-level positive airway pressure (BiPAP) and airway pressure release ventilation (APRV).</p> <ul style="list-style-type: none"> • Discuss manipulation of various ventilation parameters (depending on the mode) such as (but not limited to) ventilation rate, tidal volume, minute volume, flow, positive endexpiratory pressure (PEEP), inspiratory: expiratory ratio, trigger, pressure support, maximum/peak airway pressure, plateau, slope and FiO₂ in adults and children in a variety of clinical contexts • Demonstrate the setup and monitoring of a mechanical ventilator in relation to the modes and parameters above (those relevant to the ventilator being used). • Interpret ventilation flow-volume loops and relate these to the mode of ventilation, adequacy of ventilation and condition of the patient. • Discuss the importance of correctly setting ventilator alarms and provide sample values for a variety of alarm parameters for adults and children.
--	--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Describe the process of monitoring a ventilated patient using pulse oximetry, capnography and arterial blood gas (ABG) analysis (see specific outcomes for ABG below). • Troubleshoot a range of situations related to alarms and patient-ventilator problems. • Discuss the risk-factors for and pathogenesis of ventilator-associated lung injury (VALI). • Describe protective ventilation strategies that can be used in order to minimise the risk of VALI. • Discuss factors affecting the readiness of a patient for weaning from mechanical ventilation and the processes and monitoring to be carried out when weaning. • Describe non-invasive ventilation (NIV) by referring to its indications, contra-indications and modes. • Demonstrate the setup and monitoring of NIV using a mechanical ventilator. <p>Arterial Blood Gas Analysis</p> <ul style="list-style-type: none"> • Explain the role played by ABG analysis in monitoring of the critically ill patient. • Discuss the importance of pH, PaO₂, PaCO₂, HCO₃⁻ and base excess in analysis of an arterial blood sample.
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> Identify respiratory and metabolic acidosis and alkalosis, and mixed acid-base disorders, from a blood gas report based upon the parameters given above and clinical patient data. Demonstrate how to obtain an arterial blood sample for ABG analysis <p>Monitoring</p> <ul style="list-style-type: none"> Discuss the role of ECG, arterial oxygen saturation, end-tidal CO₂, non-invasive blood pressure and body temperature monitoring in routine critical patient care. Discuss the role of invasive haemodynamic monitoring and the routine care of arterial vascular lines and their attachments. Discuss the role of central venous access and monitoring and the routine care of central venous lines and their attachments. <p>Infusions</p> <ul style="list-style-type: none"> Flow rates and required drug volumes and concentrations for drug delivery with a syringe driver or infusion pump are accurately calculated. A syringe driver and infusion pump is used to effectively deliver a drug at a prescribed infusion rate. A syringe driver and infusion pump is effectively managed with regard to
--	--	--	--	--	--	---

						<p>troubleshooting techniques.</p> <ul style="list-style-type: none"> • The role of nasogastric feeds and TPN, as well as the care and monitoring of these during transfer, is briefly discussed. <p>Fluid Balance</p> <ul style="list-style-type: none"> • Discuss the fluid requirements of critically ill patients including those post-surgery and those with trauma, burns, metabolic disorders and sepsis. • Describe the appropriate choice of fluids for resuscitation of the above patients, and the strategies to be employed with regard to fluid resuscitation in these situations. • Explain the basic procedures of fluid intake and output monitoring and documentation. <p>Intra-aortic Balloon Pump</p> <ul style="list-style-type: none"> • Describe indications for and the placement and functioning of an intra-aortic balloon pump (IABP). • Discuss the routine monitoring of a patient with a IABP in situ during transfer. • Describe the steps to be taken to troubleshoot specific problems that may occur with a IABP during transfer. <p>Imaging</p> <ul style="list-style-type: none"> • Demonstrate accurate interpretation of a chest radiograph. <p>General Care</p>
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Discuss factors responsible for the formation of pressure ulcers in critically ill patients and how these can be avoided during transfer. • Explain the importance of maintaining a neutral thermal environment during transfer and how to achieve this. • Describe the general care principles of intercostal and other drains, and wound dressings during transfer <p>Preparation for Transfer, Transfer and Handover</p> <ul style="list-style-type: none"> • Demonstrate effective patient assessment, accumulation of data from all sources, patient packaging and decision-making in preparation for an ICU transfer. • Discuss the haemodynamic and other changes that patients may experience during road transportation and the effects that these may have. • Explain the decision-making and consultative steps to be taken if a patient suddenly deteriorates during transfer and requires resuscitation or other non-standing order treatment. • Describe the features of a fully comprehensive handover, including all documentation, of a patient at a receiving facility after an ICU transfer. <p>Pre-hospital thrombolysis</p>
--	--	--	--	--	--	--

						<ul style="list-style-type: none"> • Define the term thrombolysis and give an overview of the theoretical benefits and complications of thrombolytic therapy. • Discuss the therapeutic role played by thrombolytic therapy in the treatment of myocardial infarction (MI) and related acute coronary syndromes. • Critically evaluate scientific literature either supporting or refuting the safety and effectiveness of pre-hospital thrombolysis by non-physician, independent practitioners. • Discuss the theoretical benefits of initiating thrombolytic therapy in the pre-hospital environment. • Describe the thrombolytic drugs in common usage under the following headings: mechanism of action; indications; contra-indications; precautions and drug interactions. • Describe the most recent, accepted thrombolysis regimens and referring to published evidence, evaluate their appropriateness within the pre-hospital context. • Discuss the common complications of thrombolysis, particularly in the pre-hospital environment, and approaches that may mitigate against these complications. • Demonstrate sound clinical decision-making with regard to
--	--	--	--	--	--	---

						<p>patient selection for prehospital thrombolysis, using clinical scenarios (including possible interpretation of a 12-lead electrocardiogram in each case).</p> <p>Principles of aeromedical transport</p> <ul style="list-style-type: none"> • Briefly describe the history and background of rotor and fixed wing medical evacuation, internationally and locally. • Discuss the advantages of aero-medical evacuation, both in terms of primary response and inter-facility transfer and refer to any scientific evidence in this regard. • Give an overview of the characteristics and capabilities of current South African role players in the aero-medical evacuation field. • Discuss legislative, educational, registration and any other relevant requirements applicable to South African aero-medical evacuation organisations and medical personnel. • Briefly describe the processes involved in receiving, dispatching, following and terminating an aero-medical mission – both rotary and fixed wing. • Discuss commonly used dispatch criteria for rotary and fixed wing missions.
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Describe conditions or situations where air evacuation would be inappropriate. • Describe the safety precautions and procedures to be adhered to when operating near both rotary and fixed wing aircraft. • Explain how to set up both day and night helicopter landing zones and how to control these landing zones in a safe way during approach, landing, loading and take-off. • Discuss the composition of the atmosphere and characteristics of its different layers. • State the gas laws (Boyle's, Charles', Dalton's, Henry's, ideal) and give examples of how these are applicable to functioning and caring for patients at altitude. • Relate the gas laws specifically to the effects of cabin pressurisation and sudden loss thereof. • Describe the effects of increasing altitude on oxygenation and human functioning related to hypoxia. • Describe the stresses of flight and highlight ways in which any of these stresses could be minimised. • Discuss the effects of various other factors (e.g. medication, fatigue etc) on human performance at altitude and identify substances or activities that must be
--	--	--	--	--	--	--

						<p>avoided prior to or during flight.</p> <ul style="list-style-type: none"> • Explain general steps to be taken in accomplishing effective: <ul style="list-style-type: none"> ○ Handover from hospital staff on arrival; ○ Preparation of a patient for aero-medical evacuation; ○ Care and monitoring during flight; ○ Transfer to the receiving hospital (if applicable); ○ Handover to the receiving hospital staff; ○ Documentation; • Discuss the legal and procedural consequences and approaches to the declaration of death in flight. <p>Diving Emergencies</p> <ul style="list-style-type: none"> • Define the following terms: <ul style="list-style-type: none"> ○ SCUBA; ○ Closed circuit rebreather ; ○ Surface supply diving • Calculate the pressures that water exerts on the body at different depths. • Explain, in general terms, how diving tables work. • Discuss the various gas laws (Boyle, Henry and Dalton) and explain how different gases, especially nitrogen and oxygen are affected at different depths. • Calculate the partial pressures of common
--	--	--	--	--	--	--

						<p>gases at various depths.</p> <ul style="list-style-type: none"> • Calculate air consumption and gas volumes in different size pressure vessels. • Identify important information to obtain when interviewing a patient that suffers from a diving related emergency • Explain the significance of the following diving activities on patients suffering from a diving-related emergency: <ul style="list-style-type: none"> ○ Exceeding recommended total bottom time, or prolonged total bottom time at depth; ○ Multilevel dives; ○ Repeated dives and time frames between dives; ○ Missed decompression and safety stops; ○ Diving at altitude ; ○ Diving in cold water; ○ Travelling after diving ; ○ Rapid ascent; • Discuss the pathology, clinical features and management of the following disorders: <ul style="list-style-type: none"> ○ Squeeze and reverse squeeze; ○ Barotrauma of ears, teeth and sinuses; ○ Nitrogen narcosis; ○ Decompression sickness; ○ Lung hyperinflation syndrome; ○ Surgical emphysema;
--	--	--	--	--	--	--

							<ul style="list-style-type: none"> ○ Pneumothorax and tension pneumothorax; ○ Arterial gas embolism; • Explain the relationship between decompression sickness and decompression illness. • Define the term shallow water blackout. • List the risk factors for shallow water blackout. • Explain how shallow water blackout occurs, at depth and due to hyperventilation. • Discuss the management of a patient suffering from shallow water blackout.
Mental Health and Wellness	MHW1BB 1	100%	0%	6	6	<p>The purpose of this module was to educate the student in personal health and wellness and prepare them to manage themselves for the adverse circumstances facing them as paramedics (that may put them at personal and professional risk). 							<p>venous drainage;</p> <ul style="list-style-type: none"> ○ Hypoplastic left heart syndrome; ○ Pulmonary stenosis; ○ Aortic coarctation. <p><i>Diabetes Mellitus</i></p> <ul style="list-style-type: none"> ▪ Discuss the incidence and epidemiology of diabetes mellitus occurring in childhood. ▪ Describe the aetiology of diabetes mellitus in children, particularly with reference to traditional classification of the disease. ▪ Describe factors which may lead to both DKA and hypoglycaemia in paediatric patients with DM. ▪ Discuss principles of pre-hospital treatment for both DKA and hypoglycaemia. [Refer to HPCSA ALS protocols] <p><i>Seizures</i></p> <ul style="list-style-type: none"> ▪ Name the aetiologies and types more commonly associated with paediatric seizures. ▪ Define febrile seizures and discuss the underlying cause and possible neurological sequelae of this disorder. ▪ Define status epilepticus, explain the possible pathological mechanism underlying this disorder and describe its systemic and
--	--	--	--	--	--	--	---

						<p>neurological consequences.</p> <ul style="list-style-type: none"> ▪ Discuss principles of pre-hospital treatment of seizures, particularly generalised tonic-clonic seizures and convulsive status epilepticus, including the administration of benzodiazepines for the termination of seizures. [Refer to HPCSA ALS protocols] <p><i>Intracranial Infections</i></p> <ul style="list-style-type: none"> ▪ Define meningitis and encephalitis. ▪ Describe the most common causative organisms associated with bacterial meningitis in different paediatric age groups and how the disease is transmitted from person to person. ▪ List the factors predisposing paediatric patients to intracranial infections. ▪ Describe the pathophysiology of meningitis, including the effects of raised intracranial pressure caused by this condition. ▪ Name the clinical features of bacterial meningitis in different paediatric age groups. ▪ Discuss principles of pre-hospital treatment of intracranial infections in general, and bacterial meningitis in particular. ▪ Discuss specific precautions to be taken when dealing with cases of meningococcal septicaemia. <p><i>Sepsis</i></p>
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> ▪ Define sepsis and briefly describe the incidence and aetiology of paediatric sepsis . ▪ List markers associated with the identification of sepsis in paediatric patients. ▪ Explain the major pathophysiological consequences of sepsis on respiratory and haemodynamic functioning. ▪ Discuss principles of pre-hospital supportive treatment of the septic paediatric patient. <p><i>Toxicology</i></p> <ul style="list-style-type: none"> ▪ Name the various forms of exposure to toxins and relate these to risk for poisoning in different paediatric age groups. ▪ Discuss the toxicology (MOA, effects, lethal dose, clinical features of exposure) of: <ul style="list-style-type: none"> ○ Paracetamol; ○ Aspirin; ○ Organophosphate pesticides; ▪ Discuss principles of pre-hospital treatment, including any antidotes, for each of the agents listed above. [Refer to HPCSA ALS protocols] <p><i>Trauma & Burns</i></p> <ul style="list-style-type: none"> ▪ Describe injury patterns and mechanisms of injury specific to different paediatric age groups in relation to mobility, behavioural development and
--	--	--	--	--	--	--

						<p>anatomical characteristics (including SCIWORA).</p> <ul style="list-style-type: none"> ▪ Explain the haemodynamic compensatory response to blood loss in different paediatric age groups and how this relates to the clinical identification of hypovolaemia. ▪ Relate prior knowledge of fluid choice and administration in traumatic hypovolaemia to paediatric patients. ▪ List the most common causes of burns in different paediatric age groups. ▪ Use the paediatric 'rule of nines' to estimate burned surface area in paediatric patients. ▪ Define a critical burn as this relates to BSA, depth and burns to specific anatomical regions in different paediatric age groups. ▪ List clinical features associated with inhalation burns. ▪ Discuss the rationale for treatment of critical burns in a specialist burns unit and name the burns units in Gauteng. ▪ Discuss principles of pre-hospital treatment for burns in paediatric patients including care of the burn wound, specific airway management in a case of inhalation burns and IV fluid administration. <p><i>Pain Management</i></p> <ul style="list-style-type: none"> ▪ Discuss the
--	--	--	--	--	--	---

						<p>challenges associated with identifying and quantifying pain, particularly in younger children.</p> <ul style="list-style-type: none"> ▪ Name the clinical features associated with the behavioural response to pain in different paediatric age groups. ▪ Discuss the management of pain in different paediatric age groups and specifically the administration of opioid analgesics. [Refer to HPCSA ALS protocols]. <p><i>Child Abuse</i></p> <ul style="list-style-type: none"> ▪ Define the various forms of physical and sexual child abuse and child neglect. ▪ Identify behavioural and physical signs suggestive of these types of abuse and/or neglect in different paediatric age groups. ▪ Identify behavioural and physical signs suggestive of these types of abuse and/or neglect in different paediatric age groups. ▪ Describe behavioural characteristics that may be encountered in the abusive parent or caregiver at the time of patient contact or interaction. ▪ List the steps to be taken in reporting suspected cases of child abuse and/or neglect. ▪ Discuss the pivotal role played by accurate recording of clinical and circumstantial data for future use, within
--	--	--	--	--	--	---

						<p>the context of legal procedure.</p> <p><i>HIV/Aids</i></p> <ul style="list-style-type: none"> ▪ Give an overview of the epidemiology of paediatric HIV/AIDS in South Africa. ▪ Describe the most common opportunistic infections associated with AIDS in different paediatric age groups. ▪ Briefly discuss the role played by anti-retroviral drugs in the treatment of paediatric HIV/AIDS and list some of the more common side-effects associated with these drugs. <p><i>Approach to a Child with a Decreased Level of Consciousness</i></p> <ul style="list-style-type: none"> ▪ Give a suitable definition for the terms encephalopathy and coma, and differentiate between them. ▪ Discuss the assessment of level of consciousness in children, and some of the pitfalls and limitations particularly in younger children. ▪ Discuss common causes of decreased level of consciousness in children. ▪ Explain general and specific management principles for decreased level of consciousness in children. <p><i>Drowning and Near-drowning</i></p> <ul style="list-style-type: none"> ▪ Define the terms drowning, near-drowning and immersion and differentiate clearly
--	--	--	--	--	--	---

							<p>between them.</p> <ul style="list-style-type: none"> ▪ Discuss common circumstantial causes of drowning and near drowning in children, and relate these to age categories. ▪ Describe the pathophysiology of drowning and near drowning. ▪ Explain the priorities in treatment of a paediatric drowning/near drowning victim (including safety) and outline the principles of management in the pre-hospital setting.
Pharmacology 1	PHA01Y 3	100%	0%	7	12	<p>The Pharmacology module dealt with the principles of pharmacology and how generic groups of medications may interact with and affect human physiology. This subject required the student to once again link their understanding of physiology, pathophysiology and emergency medical care to the prescription and administration of medications. Issues such as the legal requirements surrounding the procurement, use, and storage of medications were also covered. Each of the medications that were commonly prescribed and / or administered by emergency care practitioners were dealt with in significant detail.</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <p>Define pharmacology.</p> <p>Discuss the development of a drug with regards to patenting, in vitro testing, animal testing, different phases of clinical testing and drug marketing.</p> <p>Describe scope of modern pharmacology including small molecule based therapies, protein based therapies (biopharmaceuticals), stem cell based therapies, gene based therapies</p> <p>Discuss the role of the legislating bodies with regards to pharmacology.</p> <p>Describe different types of drug formulations and the importance of additives in drugs</p> <p>Outline nomenclature used to describe drugs e.g. generic name, trade name, orphan drug, offlabel use etc.</p> <p>Name the various routes of administration of</p>

							<p>drugs, giving the advantages and disadvantages of each. Describe absorption and factors that will influence it with reference to clinically utilised sites of administration</p> <p>Describe the factors influencing the distribution of drugs (e.g. protein binding, lipid solubility, pH, pKa) and their alteration in physiological and pathological disturbance</p> <p>Describe the mechanisms of non-hepatic and hepatic metabolism of drugs.</p> <p>Describe Phase 1 and Phase 2 reactions, hepatic extraction ratio and its significance, first pass effect, enzyme induction and inhibition</p> <p>Explain the mechanism and significance of selected pharmacogenetic disorders such as malignant hyperpyrexia, porphyria</p> <p>Describe the mechanisms of drug clearance and how physiological and pathological disturbance may effect these</p> <p>Discuss steady-state drug levels in the blood and the factors which influence steady-state concentration.</p>

In order for Emergency Care Providers to perform effectively and safely in emergency medical care and rescue environments

					<p>emergency medical and rescue environments they need to possess set minimum levels of physical strength and endurance. Rescue workers who are unfit are unable to perform as they should and this has a negative effect on the rescue operation as well as patient care. For this reason, all students who have registered for the Bachelor Degree in Emergency Medical Care programme at University of Johannesburg, were required to register for the physical preparedness module in each year of study. Students were required to partake in the on and off-campus training sessions and demonstrate that they were in acceptable physical condition. Students who failed to pass the Physical Preparedness modules were not eligible to register for any of the rescue modules, as these modules remained a prerequisite for registration and participation in the medical rescue components and related events within the B EMC programme.</p>	<p>they need to possess minimum levels of physical strength and endurance. On successful completion of the module, one is able to operate safely and effectively in a physically demanding scenario such as when performing tasks of a physical nature.</p>

						own research and the ability to work independently constitute the broad learning outcomes for this subject.	through conducting your own research. Demonstrate the ability to work independently in conducting research.
Research Methodology EMC	RMT01Y 3	100%	0%	7	12	<p>The purpose of this subject was to provide the student with opportunities and a learning structure that played a facilitatory role in the achievement of two broad outcomes:</p> <ul style="list-style-type: none"> To discuss, explain, critically analyse and apply the most important concepts underpinning the research process and the steps of this process; To demonstrate limited application of various basic skills that will be necessary in conducting a research project of limited scope. 	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> Define the term “research”. Discuss the “three worlds” framework and explain how this characterises the nature of research. Refer to and explain eight characteristics of research in support of your definition. Give some examples of what research is not and, in each case, explain why not. Critically discuss the validity of publication (or dissemination) of results as a ninth essential characteristic of research. Explain what is meant by the term “peer-review” and why it plays such a crucial role in defining activities classed as “research”. Define the term “worldview” as used within the context of this learning unit. Describe the characteristics of the post-positivist worldview and explain the

						<p>relationship between this worldview and the quantitative research paradigm.</p> <ul style="list-style-type: none"> • Define inductive and deductive reasoning and contrast these two types of logical reasoning by referring to examples of each. • Relate inductive and deductive reasoning to quantitative research and describe how the nature of quantitative research can utilise either type of reasoning. • Describe what the scientific method is and what it encompasses. • Briefly explain the historical background to the evolution of the scientific method as we know it today, as a way of describing why this body of techniques has become so important. • Name each element of the scientific method and explain what it is, how it is implemented and why it is crucial to this body of techniques. • Define quantitative research by referring to the central features of post-positivism
--	--	--	--	--	--	--

							<p>and the scientific method.</p> <ul style="list-style-type: none"> • Critically discuss limitations of the post-positivist worldview and the scientific method as defined above and explain how these limitations gave rise to what is currently known as qualitative research. • Describe the characteristics of the social constructivist worldview and explain the relationship between this worldview and the qualitative research paradigm. • Define qualitative research by referring to the central features of social constructivism. • Briefly discuss mixed-methods research and explain how and when this type of research would be relevant. • Define and contrast the terms “research design” and “research method” and give examples of each. • Describe the essential characteristics of the following research designs: <ul style="list-style-type: none"> ➤ Quantitative Designs – Observational: <ul style="list-style-type: none"> ○ Case-series studies
--	--	--	--	--	--	--	--

							<ul style="list-style-type: none"> ○ Case-control studies ○ Cross-sectional studies ○ Cohort studies ➤ Quantitative Designs – Experimental: <ul style="list-style-type: none"> ○ Controlled clinical trials (concurrent controls, different types of non-concurrent controls, blinded trials, randomised & non-randomised trials) ➤ Quantitative Designs – Other: <ul style="list-style-type: none"> ○ Surveys ➤ Qualitative Designs: <ul style="list-style-type: none"> ○ Ethnographic studies ○ Grounded theory ○ Case studies ○ Phenomenological studies • Give an example of one or more simple research problems where each of the above designs could be suitably used. • Define the term “index” as this applies to published literature. • Give the names and sources of electronic indices
--	--	--	--	--	--	--	---

						<p>applicable to medical research and how these can be accessed.</p> <ul style="list-style-type: none"> • Give a brief overview of the extent and type of literature indexed in Index Medicus, Medline and CINAHL. • Define the term “keyword” as this applies to published literature and briefly discuss the origin and purpose of keywords that are part of a publication. • Discuss various options for searching each index named above (i.e. searching on title, author, keyword etc). • Define the term “medical subject heading” [MeSH] as this applies to the Medline index and explain the purpose and importance of MeSH terms. • Define the Boolean operators and demonstrate correct usage of the AND, OR and NOT operators as part of a search strategy. • Describe various options that can be used in order to refine a search that has returned too many titles or titles that do not appear to be applicable.
--	--	--	--	--	--	---

						<ul style="list-style-type: none"> • Describe the difference between an abstract and the full text of a published article and explain why it is not acceptable to only use the abstract of an article as a reference. • Discuss the options available for accessing the full text of a published article, including a brief explanation of how the interlibrary loan system works. • Discuss the relevance and role played by general purpose internet search engines. • Explain the pitfalls of reliance on the internet as a sole source of scientific information. • Describe the characteristics of reputable information sources to be found on the internet. • Discuss the purpose of the literature review in a research proposal. • Describe the steps to follow in performing a literature review. • Define plagiarism, and the different types of plagiarism, and critically discuss why plagiarism is wrong.
--	--	--	--	--	--	---

							<ul style="list-style-type: none"> • Explain the purpose of referencing and how references should be used in a literature review. • Critically evaluate the use of bibliographic software for referencing by referring to advantages and disadvantages of this kind of software. • Describe the characteristics of an appropriate research title. • Differentiate between the research aim and objectives. • Demonstrate how to structure the wording of a research aim and research objectives. • Explain the purpose of the research question and problem statement and how these can be used in clarifying the aim and objectives. • Discuss the main features and requirements for writing an appropriate research method. • Define and differentiate reliability and validity with regard to quantitative research. • Discuss common measures that may be taken to ensure or
--	--	--	--	--	--	--	--

							<p>enhance validity and reliability.</p> <ul style="list-style-type: none"> • Discuss trustworthiness in qualitative research by explaining its component parts; credibility, transferability, dependability and confirmability. • Discuss common measures that may be taken to ensure or enhance trustworthiness. • Critically discuss the importance of alignment of the research title, aim, objectives and method. • Describe the two data types – qualitative and quantitative – and discuss other data types falling into these two broad categories (categorical, ordinal, binary, scale and ratio). • Give examples of typical research applications where each of the above data types could be used. • Discuss the aims of descriptive data analysis, both as a final outcome and as a preliminary step in more complex statistical analysis. • Describe the most basic ways of arranging categorical and ordinal data – frequency analysis and
--	--	--	--	--	--	--	--

							<p>contingency tables.</p> <ul style="list-style-type: none"> • Discuss the most effective ways of displaying frequency or count information graphically. • Define a histogram and explain how histograms may be used as a way of summarising quantitative variables. • State the two most important descriptive measures for scale and ratio data types – central tendency and variation. • Define the mean, the median and the mode, explain their value as measures of central tendency and state the advantages and disadvantages of each. • Define the range, variance and standard deviation and explain their value as measures of dispersion. • Define the quantiles, specifically the 25th, 50th and 75th percentiles and the interquartile range and explain their value as measures of both central tendency and variation. • State when it would be most appropriate to describe data by
--	--	--	--	--	--	--	---

							<p>placing it in a contingency table or by calculating values such as the mean, median, variance, standard deviation, quartiles and interquartile range.</p> <ul style="list-style-type: none"> • Explain the advantages of a box-plot for the graphical display of quantitative data and interpret box-plots. • Describe possible sources and the nature of qualitative data. • Differentiate between basic qualitative data analysis and more advanced forms of qualitative data analysis. • Describe Creswell's five basic steps, and Denscombe's four basic steps, in qualitative data analysis. • Discuss the importance of Denscombe's five key decisions in the analysis of qualitative data. • Discuss the use of software in qualitative data analysis. • Define morality, ethics and bioethics. • Explain what a moral theory is and how such theories can be used in ethics. • Discuss the key features of utilitarian,
--	--	--	--	--	--	--	---

							<p>Kantian, rights and virtue moral theories and use these theories to critically evaluate moral problems.</p> <ul style="list-style-type: none"> • Discuss the concept of moral virtue and five focal virtues or health professionals; compassion, discernment, trustworthiness, integrity and conscientiousness. • Differentiate between clinical practice and research, clearly specifying when an intervention ceases to be clinical practice and becomes research. • Explain why ethics is necessary in research. • Describe the ethical principles of respect for autonomy, non-maleficence, beneficence and justice, and how these relate to ethical practice in research. • Discuss the ethical principles outlined in the South African Department of Health Research Ethics Guidelines (2004). • Discuss the importance of and requirements for informed consent in any form of health research.
--	--	--	--	--	--	--	--

							<ul style="list-style-type: none"> • Clearly explain special considerations with informed consent in the following categories: <ul style="list-style-type: none"> ➤ Patients undergoing emergency treatment; ➤ Minors; ➤ Patients with a mental illness or handicap; • Discuss best practices for obtaining informed consent for research participation. • Describe the requirements for consent when use is made of clinical records in both prospective and retrospective research designs. • Explain the importance of and requirements for patient confidentiality of health research and how confidentiality may be achieved. • Differentiate between confidentiality and anonymity and explain how anonymity may be achieved and the consequences of this. • Discuss the different types of research vulnerability and how the rights of vulnerable groups can be protected in research.
--	--	--	--	--	--	--	--

							<ul style="list-style-type: none"> • Describe the responsibilities of a researcher before and after a study. • Discuss scientific integrity and misconduct (including plagiarism) and steps that can be taken to recognise, report and combat these. • Give an overview of the steps in the research process, from choosing a research topic to writing and handing in the completed research report. • Discuss the role of the research supervisor.
Structural Collapse Rescue	SCR01Y4	100%	0%	8	10	<p>To provide the student with the necessary knowledge, skills and techniques to access and extricate entrapped victims from collapsed structures. The module focused on the collapsed structures but drew upon the outcomes from all other rescue modules which were applicable to the structural collapse rescue environment.</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <ul style="list-style-type: none"> • Structural collapse incident safety <ul style="list-style-type: none"> ○ Identify components of safety that need to be identified during all phases of structural collapse incidents. ○ Discuss hazard recognition and identify what needs to be considered during the initial building assessment. ○ Comprehensively discuss the mitigation of hazards.

							<ul style="list-style-type: none"> ○ Discuss the “Lookout”, “Communication”, “Escape Routes” and “Safety Zones” (LCES) principles. ○ Explain risk assessment in the structural collapse environment. ○ Discuss PPE used in structural collapse incidents ● Structural collapse engineering systems and collapse patterns <ul style="list-style-type: none"> ○ Explain the effect of compression, tension, bending and shear forces on wood, steel, masonry and concrete. ○ Explain ductile and brittle properties of above mentioned building materials. ○ Discuss vertical and lateral load resistant forces. ○ Identify man-made and natural causes for structural collapse. ○ Discuss and explain different building construction types with reference to: ○ Identify the various types of building construction. ○ List the various warning signs that should be considered, for each construction
--	--	--	--	--	--	--	--

							<p>type, to indicate significant damage and potential collapse.</p> <ul style="list-style-type: none"> ○ Identify the common collapse pattern for each building type. ○ Identify the possible location of victims per construction type. ○ Discuss methods to mitigate hazards in each of the construction types. ○ Identify the most appropriate search technique for each construction type <ul style="list-style-type: none"> ● Information gathering and building identification <ul style="list-style-type: none"> ○ Briefly explain the phases of a structural collapse incident. ○ Elaborate on the initial phases of task force deployment. ○ Apply basic strategies in the initial information gathering stage. ○ Explain team deployment at a structural collapse incident. ○ Demonstrate structure hazards and evaluation marking. ○ Demonstrate the marking of an area where a patient has been identified.
--	--	--	--	--	--	--	---

							<ul style="list-style-type: none"> ○ Discuss principles of building triage. • Shoring techniques <ul style="list-style-type: none"> ○ Provide a definition of a “shore”. ○ Explain the principles of shoring. ○ Explain the properties of shoring systems. ○ Discuss the “six-sided approach” to shoring. ○ Demonstrate how to effectively construct and effectively install the following: <ul style="list-style-type: none"> ▪ Vertical Shores ▪ T-spot shores ▪ Door/window shores ▪ Cribbing ▪ Laced posts ▪ Mechanical shores ▪ Sloped floor shores ○ Horizontal shores ○ Raker shores <ul style="list-style-type: none"> ▪ Flying raker ▪ Split pole raker ▪ Flying raker • Breaching, breaking, cutting and burning
Trench Rescue	TRR01Y4	100%	0%	7	10	<p>This module will provide you with the necessary knowledge, skills and techniques to extricate entrapped victims involved in trench and excavation incidents. The module will focus on the fundamentals of</p>	<p>Throughout completion of this module, the following learning outcomes were achieved:</p> <p>Introduction to trench rescue Provide a definition of a trench. Label the “anatomy” of a trench.</p>

						<p>shoring of collapsed trenches and the access, stabilisation and removal of entrapped victims</p> <p>Explain the various uses of trenches. Discuss key legislative concepts surrounding working in and around trenches. Discuss types of trench incidents. Discuss dangers associated with trench rescue work. Discuss the effects of trench incidents. Identify the misconceptions that laypersons have regarding trenches and trench collapse. Identify which factors may contribute to trench collapse. Classify the different soil types and explain the implications of each type for trench rescue operations. Trench rescue equipment Discuss the types of equipment used for trench rescue with regards to the following: Materials used to manufacture equipment Functions of each piece of equipment Correct inspection of equipment Advantages and disadvantages of equipment Safe operation of equipment used in trench rescue Discuss the use of different types of PPE used in trench rescue operations. Demonstrate the ability to decide upon the use of appropriate pieces of PPE and the correct use thereof.</p>
--	--	--	--	--	--	---

						<p>Trench rescue operations</p> <p>Describe the activities associated with each phase of the trench rescue.</p> <p>Discuss how to prepare for trench rescue incidents.</p> <p>Discuss relevant information to obtain when receiving the call.</p> <p>Identify the correct parking of vehicles at a trench rescue incident.</p> <p>Discuss how to differentiate between a general area and a rescue area</p> <p>Explain how to perform a primary assessment of a trench rescue incident.</p> <p>Identify hazards and describe ways to mitigation these hazards.</p> <p>Explain how to find buried victims using clues.</p> <p>Explain how to perform a secondary scene assessment.</p> <p>Explain how you would determine the appropriate additional resources needed to assist in the rescue operations.</p> <p>Explain how to ensure that rescuers are protected at all times during the rescue operation</p> <p>Discuss how to make the general area safe.</p> <p>Discuss how to make the rescue area safe</p> <p>Discuss how to make the trench lip safe</p> <p>Discuss to make the trench safe</p> <p>Discuss alternative techniques for trench safety</p>

POSTGRADUATE DIPLOMA IN CLINICAL SIMULATION (E9CSMO)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Adult Learning and Simulation Pedagogy	ASP01A O ASP01B O	100%	0%	8	24	Module two aims to assist the learner in understanding adult learning theories and their application to simulation-based	At the end of this module, the learner should be able to apply adult learning theories to the construction and application of

						teaching, learning and assessment. The module also provides a theoretical framework and foundation for application and defence of an integrative approach to embedding simulation into the curriculum.	simulation-based learning experiences.
Clinical Simulation and Instructional Design	CSD01A O CSD01B O	100%	0%	8	24	This module focusses on the design and construction of simulation-based learning experiences and the appropriate application thereof. Students will be developed in all aspects associated with designing and facilitating simulation-based teaching, learning and assessment experiences.	At the end of this module, the learner should be able to design and implement simulation-based learning experiences using appropriate teaching, learning and assessment strategies.
Facilities and Resource Management	FRM01A O FRM01B O	100%	0%	8	12	In the facilities management module, the structure, functioning, storing and management of resources associated with simulation facilities will be addressed. This module also covers budgeting approaches for funding simulation technologies including health and safety considerations associated with operating	At the end of this module, the learner should be able to describe the core principles associated with the management of simulation facilities and related resources.

						simulation laboratories.	
Introduction to Simulation	ITS01AO ITS01BO	100%	0%	8	10	The Introduction to Simulation module focuses on the historical development of simulation as an activity/tool leading to its contemporary application in the field of health sciences education. Engagement with this module will develop the student's foundational knowledge on simulation. Such knowledge is required for critical reflection and scholarly discourse around the role and application of simulation for the development and assessment of clinical competence and related learning outcomes.	At the end of this module, the learner should be able to demonstrate a deep understanding of the development and application of clinical simulation as a strategy for health professions education.
Simulation Practices (Portfolio)	SIP01YO	100%	0%	8	24	This module focuses on the construction of a portfolio of evidence. It is an opportunity to provide the student an opportunity to showcase evidence that they have been able to meaningfully implement and integrate taught concepts mastered during the programme within their own teaching learning and assessment context.	At the end of this module, the learner should be able to design, implement and assess a simulated teaching activity.
Simulation and Research	SIR01A O SIR01B	100%	0%	8	12	This module involves the critical appraisal of	At the end of this module, the learner should be able to

	O					research in the simulated environment. The module provides the student with an ability to meaningfully integrate current evidence informed findings within their teaching with an appreciation of the advantages and limitations associated with conducting research using simulation.	critically appraise research methodologies and approaches used in simulation contexts.
Simulation Technologies and Modalities	STM01A O STM01B O	100%	0%	8	18	The Simulation technologies and modalities module focusses on contemporary simulation technologies and current simulation modalities. The purpose of this module is to develop the students' understanding and applicability of modern simulation technologies and modalities. Principles of value and application will serve as a foundation for the student's ability to select and use appropriate technologies to support their use of technology in the simulation space and to enhance their personal, ongoing development as a simulation practitioner.	At the end of this module, the learner should be able to do describe and critically appraise current clinical simulation technologies and modalities with regard to their value and application.

BACHELOR OF ENVIRONMENTAL HEALTH (B9ENV1)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Air Quality Management	AQMEH 04	100%	0%	7	20	<p>The primary purpose of this module is to prepare students, to assume an effective advocator and change agent role in the community and industries, using a variety of tools and techniques.</p> <p>This module will equip students with some of the conceptual resources, analytical skills and empirical materials that are required to effectively manage environmental pollution.</p>	<p>At the end of this module, students should be able to do the following:</p> <ul style="list-style-type: none"> • Describe and define environmental pollution in terms of air quality. • Describe the impact of pollution on environment, economy, social process, and human health. • Comprehend the basic elements of air pollution and climate change that affect human health and diseases. • Identify air pollution and differentiate various sources involved. • Describe development of environmental pollution legislation, its delivery and implementation pre/post 1994. • Demonstrate ability to analyse and criticize different pieces of environmental legislation. • Conduct pollution investigation and undertake sampling using existing acceptable procedures. • Analyse and interpret laboratory results and make appropriate recommendations. • Demonstrate an

							<p>understanding of the natural components of the atmosphere and the different effects that may result from pollution.</p> <p>10. To understand the principles of intervention that will contribute to the effectiveness of the Environmental Health Practitioner's role within the community.</p>
Anatomy & Physiology	APENV01	100%	0%	6	20	<p>Anatomy and Physiology provide foundational knowledge for pathology and clinically related subjects. The content covered in this module includes an orientation of the human body; basic chemistry for Anatomy and Physiology; the cell and body tissues; skin and body membranes; the skeletal system; muscle; the nervous system and senses; the endocrine system; blood and the cardiovascular system, the respiratory system; the lymphatic system and body defenses; and the digestive-, urinary-, and reproductive systems.</p>	<ul style="list-style-type: none"> • Introduction to human anatomy and physiology • Chemical basis of life • Integumentary system • Skeletal system • Nervous system 1: basic structure and functions • Endocrine system • Cardiovascular system • Lymphatic system and immunity • Digestive system • Nutrition and metabolism • Respiratory system • Urinary system • Water electrolytes and acid-base balance <p>Reproductive system</p>
Applied Communications Skills	COM1001	50%	50%	5	12	<p>This module is designed to develop your abilities with regard to effective communication within the context of the dynamic, modern social and work environment.</p>	<ul style="list-style-type: none"> • Introduction to Human Communication • Perception, Self, and Communication • Language and Meaning • Nonverbal Communication • Listening and

							Critical Thinking • Interpersonal Communication Intercultural Communication
Biochemistry	BICH1A1	50%	50%	6	6	The purpose is to gain an understanding of how molecules unite and associate to form large functional units and finally integral organisms that acquire and use energy and sustain their identity across generations.	• Recognise and describe the four major types of molecules and three major types of polymers found in all living organisms • Describe and explain the functions of the four major types of molecules and three major types of polymers found in all living organisms] • Describe and explain the flow of genetic information in living organisms • Describe and explain the role of enzymes in living organisms Recognise, describe and explain the flow of energy, carbon and reducing equivalents in the major metabolic pathways i.e. glucose metabolism, the citric acid cycle, electron transport and oxidative phosphorylation, fatty acid metabolism, photosynthesis and nitrogen metabolism
Chemistry	CETH1Y1	50%	50%	5	12	The primary purpose of this module is to develop the basic knowledge, understanding and practical skills of chemical principles and techniques of general chemistry as required for further modules in Environmental Health.	1.1 Define matter. 1.2 List the three states of matter and their properties. 1.3 Distinguish between physical and chemical properties and changes. 1.4 Distinguish between elements, compounds and mixtures (homogeneous or heterogeneous). 1.5 Identify the most

							<p>important subatomic particles. 1.6 Draw Bohr models of the first ten elements. 2.1 Define covalent and ionic bonds. 2.2 List the differences between covalent and ionic compounds. 2.3 Name and write formulae of covalent and ionic compounds as well as acids. 3.1 Balance chemical equations. 3.2 Differentiate between the four types of reactions. 3.3 Write equations representing the four types of reactions. 3.4 Define atomic mass, the mole and molar mass. 3.5 Interconvert between mass, mole and number of particles. 3.6 Calculate the percentage composition of elements in a compound.</p>
Community Development 1	CDENV02	100%	0%	6	15	<p>This module aims to develop skills that will enable students to promote the well-being of communities; and to develop skills needed to implement strategies to prevent ill health of people in their living, recreational and general environments.</p>	<p>At the end of the module students should be able to:</p> <ul style="list-style-type: none"> • To profile an area / ward • To be able to differentiate between a community needs, wants and available resources • To be able to carry themselves professionally both in the office and in communities • Be able to contribute positively to policies, government gazettes, regulations and acts in the environmental health profession • To be able to fully execute an

							<p>environmental health intervention for the purpose of upliftment</p> <ul style="list-style-type: none"> To be able to put together an information, education and communication material <p>To be able to understand the various type of data collection and analysis techniques as well as monitoring and evaluation in communities</p>
Computing Literacy	CSL01A 1	50%	50%	5	6	<p>The purpose of this module is to introduce students to general computer applications commonly used in financial services operations. Students will be equipped to use the Word Processing application to solve business problems, to use Presentation software and a Spreadsheet application. These skills are necessary for academic and financial industry application.</p>	<p>The study of the subject Computer Literacy must be used to enhance all your other subjects. It is an entry level subject, and you have to extract from the course what you need to develop further.</p>
Disaster Management	DMENV0 4	100%	0%	8	10	<p>To learn theoretical and practical processes of disaster management (disaster management, response, and</p>	<ul style="list-style-type: none"> Demonstrate phases of relief work before, during and after disaster Describe the major political, economic, social and cultural factors which affect

						<p>recovery) and relate their interconnections, particularly in the field of the Public and Environmental Health aspects of the disasters.</p>	<p>the public health of a population during disasters</p> <ul style="list-style-type: none"> • Understand the disaster cycle of preparedness, response, reconstruction and mitigation; • Define the factors that influence risks to a population from a hazard and steps which can minimize these risks; • Organize disaster/emergency management functions, organizations, and activities using concepts and terms explained in the course. • Assess and address the impact of disasters on public health; • Adequately prepare for, respond to, recover from, and mitigate the adverse environmental health impacts of disaster; • Increase community, public and private sectors awareness of environmental health disaster management; • Develop and implement disaster management plan in the event of a disaster. • Implement prevention strategies for survival in disaster times; • Manage the Public and Environmental Health aspects of the disasters <p>Demonstrate their knowledge and competence in skills to assist the communities in responding to emergencies.</p>
Environmental Epidemiology	EEENV03	100%	0%	7	20	Its principal aim is to identify risk factors that can be	At the end of the module students should be able to:

						<p>averted or reduced so as to prevent or reduce the risk of future disease and promote public health.</p> <ul style="list-style-type: none"> • Demonstrate the understanding of the theoretical content of epidemiological principles as well as the role of epidemiology in public health. • Evaluate causal associations in epidemiological studies using causal criteria • Calculate and interpret basic measures of disease occurrence including incidence, prevalence, morbidity and mortality measures, • Calculate and interpret the commonly used measures of association such as, relative risk, odds ratio. • Identify and apply appropriate study designs used in epidemiology and display the ability to present and interpret epidemiological data. • Should demonstrate the understanding of the role of an Environmental Health practitioner in the disposal of the dead • Identify causes of non-communicable diseases, their impact on society and how they could be prevented. • Should be able to demonstrate the knowledge how diseases surveillance strategies are implemented locally and at international level • Apply different epidemiological principles to specific areas (toxicology and epidemiology) • Describe how epidemiological methods and data can be useful in planning, implementing, and evaluating public health
--	--	--	--	--	--	--

							<p>surveillance systems.</p> <ul style="list-style-type: none"> • Should be able to carry out an outbreak investigation as an independent practitioner or as part of an outbreak investigation team • Describe the steps in the epidemiological approach to studying the relationships between exposure and disease or other relevant health outcomes. • Critically analyse and interpret epidemiological literature considering the roles of chance, bias, and confounding as possible explanations for study findings. <p>Perform a human health risk assessment</p>
Environmental Health Management and Administration	EHMAA03	100%	0%	7	20	<p>The purpose of this module is to advance the learner's knowledge and skills that will enable them to apply to health policy formulation in South Africa including managerial legislation at national, provincial and local government levels; the health system plan of South Africa; stakeholders in the health sector; administrative processes of public administration in practices; office practice management in the workplace and scientific report writing skills in the workplace in the</p>	<ul style="list-style-type: none"> • Introduction to Environmental Health Management and Administration • Skills for Good Office Practice • The Dynamics of Public Health Administration in South Africa • Environmental Health in context • Legal aspects of health service rendering <p>Dispute Resolution</p>

						workplace.	
Environmental Management (NEMA & EMI)	EMNME04	100%	0%	8	15	The purpose of this module is to enable students to: apply legal tools in order to successfully prosecute offenders with regard to environmental legislation. This would include the role of local authorities in environmental compliance and enforcement in terms of the Constitution; Compliance and enforcement duties of local authorities in terms of national environmental legislation	<ul style="list-style-type: none"> • Legal context for environmental management compliance and enforcement • Environmental management inspector • Environmental management compliance inspection and Investigation – industry • Environmental management enforcement and prosecution
Environmental Pollution: Water, Waste and Air	EPWWA0	100%	0%	7	15	The purpose of this module is to introduce students drinking water quality, municipal waste management and indoor air pollution at household level, whether informal, rural, peri-urban or urban settings.	<ul style="list-style-type: none"> • Define water pollution and interpret water pollution prevention legislation • identify and link effects and categories of water pollutants to their sources • Implement sound sampling routines for water monitoring and laboratory analysis for interpretation of water sample results • Demonstrate knowledge of the various water treatment methods • Understand and detect any shortcomings within a water purification/ waste, water/ sewage treatment processes • Educate communities on how to purify drinking water at household level • Understand and apply the SABS standards on water quality • Identify various

							<p>sources, define and explain waste and waste management</p> <ul style="list-style-type: none"> • Classify and analyse the composition and properties of municipal solid waste • Understand the importance of a service standard within a municipality • Demonstrate the importance of waste management and understanding of waste management processes • Identify and recommend appropriate waste management equipment. • Facilitate and engage communities to actively participate in waste matters. • Distinguish between criteria pollutants and its associated health effects. • Understand the relationship between contaminant sources, exposure pathways and receptors • Describe and illustrate air pollution dispersion, types of models in Urban- rural climatic contrasts
Food and Meat Hygiene	FMHEE H0	100%	0%	6	35	<p>The purpose of the module is to equip students with the knowledge and skills that they should apply in the food industry in terms of principles of general design and layout of food premises; and; equipment (Including abattoirs and farm dairies) and good hygiene practices and good manufacturing</p>	<ul style="list-style-type: none"> • Introduction to food and meat hygiene • Food premises inspection • Food premises: formal and informal • Pathogens, hazards and changes in food • Food poisoning • Abattoir layout, practices and meat inspection

						practices.	
Food Processing and Safety	FPSEH03	100%	0%	7	20	<p>The purposes of the module are to enable students to understand the basic principles of the main methods of food processing, preservation and safety, Students will get familiar with methods such as canning, cooking, cold storage, pasteurization, aseptic processing, freezing and irradiation. After completing this module, students will be able to design corresponding methods of foods processing and safety, choose the right equipment and solve relevant application problems. Students will be able to apply the principles of ethics and professionalism, they will be able to develop and apply processes of information gathering during identification, evaluation, monitoring and control actions and to interpret and apply the appropriate legislation, standards and codes applicable to import, export, production and</p>	<ul style="list-style-type: none"> • Introduction to food processing and safety • Principles of food processing and safety • Methods of food processing and safety • Food safety standards • Food processing industries <p>Factors that affect food safety in the food industry</p>

						processing within a given context.	
Food Safety Management	FSMEH04	100%	0%	8	20	<p>The purpose of the module is to equip students to: Portray the theoretical content of the requirements that a Food Safety Management System (FSMS) must consist of SANS/ISO 22000, SANS 10330, ISO/TS 22002-1. To be able to document a FSMS based on the requirements of the above-mentioned standards. Identify food safety hazards and to conduct a hazard analysis in accordance with the requirements of the standards To Be able to independently assess FSMS documentation compiled by food establishments and to compile a report indicating the outcomes of the assessment. Portray the rules of ethics appropriate to the evaluation of food establishments</p>	<ul style="list-style-type: none"> • Introduction to food safety management systems • Strategic plan for food safety (WHO) • Planning and implementing a food safety management system • Management of pre-requisite programmes for food safety • Auditing of Food safety management systems • Resource management for food safety • Food safety communication
Infectious Disease Epidemiology	IDEEH02	100%	0%	7	15	<p>Enable you to understand the environment within which diseases occur by focusing on:</p> <ul style="list-style-type: none"> • The underlying factors (physical, biological, economic, social, psychological and political) that shapes the environment within 	<ul style="list-style-type: none"> • History and General Principles of Infectious Disease Epidemiology • The Infectious Disease Process • Prevention and Manage of Infectious Diseases • Disease Control and Public Health Surveillance • Epidemiology of Communicable Diseases

						<p>which ill health occurs;</p> <ul style="list-style-type: none"> • Modes of transmission of disease causing agents; • Significant clinical manifestations of ill health, and • Prevention and control of these conditions or events <p>As an Environmental Health Practitioner (EHP) in the making, your role within your future working environment will be largely influenced by activities aimed at the primary prevention and control of communicable diseases.</p>	<ul style="list-style-type: none"> • Epidemiology of Non-Communicable Diseases • Epidemiology of Helminth Infections • Healthcare-Associated Infections • Epidemiology and Manage of Malaria • Emerging and re-emerging infections Disease • Role of social determinants infectious disease epidemiology within South African context
Introduction to Environmental Health	ITENV01	100%	0%	6	6	<p>The purpose of the module is to equip learners with knowledge on the scope of practice of Environmental Health and to enable learners to understand the principles and importance of ethics and professionalism, as it is applicable to Environmental Health Practitioners and as set out by the Health Professions Council of South Africa (HPCSA).</p>	<ul style="list-style-type: none"> • Introduction to Professional Conduct and Ethics • HPCSA requirements with reference to the Health Professions Act 56 of 1974 • Scope of Practice for Environmental Health • Environmental Health in Context • South African Ethnic Groups, Beliefs and Cultures

						scope of Environmental Health. This course is career oriented, and assessments will mainly be based on the application of theory in line with practical application.	Development
Microbiology	MCBH1Y1	50%	50%	5	20	The module aims at preparing students to understand and discuss the standard principles of microbiology and provide students with the necessary knowledge and competence to conduct standard laboratory experiments in relation to the requirements of the Environmental Health program.	<p>Understand and describe the interaction of microorganisms with the human population</p> <p>Understand how scientific theories are developed, refined, supported or refuted as new data or its interpretations become available.</p> <p>Understand the scope of microbial diversity</p> <p>Understand the application of microscopy to imaging microorganisms</p> <p>Understand the representative cell morphologies of prokaryotes</p> <p>Understand the cytoplasmic membranes, chemo taxis and transport</p> <p>Understand the microbial growth as the ultimate process in the life of a cell</p> <p>Understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles</p> <p>Understand how these cellular components are</p>

							used to generate and utilize energy in cells
Occupational Health and Safety: Chemical / Biological	OHSCB03	100%	0%	7	20	The purpose of this module is to introduce students to the chemical and biological environments, and exposure monitoring of chemical substances and biological agents in the occupational setting. Secondly, to anticipate, recognize and identify any health and safety issues attributed to exposures within the working environment and know what control mechanisms to recommend.	At the end of this module, students should be able to: <ul style="list-style-type: none"> • Identify the departure point for an occupational hygiene program, • Evaluate the work environment for chemical toxicants and biological agents exposures, • Understand Industrial toxicology and the toxicological effects of toxicants, • Understand human physiological processes related to toxic chemical substances and biological agents, • Apply legislative concepts to control exposure to chemical and biological agents, • Recommend control actions for exposure related to chemical toxicants and biological agents.
Occupational Health and Safety: Management Systems	OHSMS04	100%	0%	8	22	The purpose of this module is to comprehensively introduce students' systems of controls and management for occupational exposure to physical, chemical, biological stressors. Secondly, to design systems of controls and management for occupational exposures.	At the end of this module, students should be able to: <ul style="list-style-type: none"> • Design health risk assessments for all occupational stressors, • Recommend medical surveillance programmes, • Design occupational hygiene survey to monitor occupational exposures, • Recommend appropriate ventilation controls for indoor chemical processes, • Design ergonomics programmes, Design, • Design best occupational health and safety programmes to reduce compensation-related financial costs for industries.

Occupational Health and Safety: Physical Stress	OHSPS02	100%	0%	7	20	The purpose of this module is to introduce students to physical hazards in the occupational settings. Secondly, to recognize and identify any health and safety issues within the working environment and know what control mechanisms to recommend.	At the end of this module, students should be able to: <ul style="list-style-type: none"> • Implement strategies to ensure a safe and healthy environment in the workplace, • Identify, evaluate and monitor occupational physical hazards, and recommend appropriate control strategies. • Demonstrate knowledge of occupational physical stressors. • Maintain and control occupational health stressors. • Implement and apply appropriate norms and standards contained in the legislation. • Implement and apply the principles of Occupational health and safety legislation. • Communicate and negotiate best practices for health and safety with relevant fraternities.
Physics	PHBH1Y1	50%	50%	5	20	The purpose of this module is to provide a factual knowledge of definitions, methods and principles in Physics, and provide a broad background knowledge of basic Physics to aid in the understanding and interpretation of future scientific and technological development and to acquire the following life skills such as identifying and solving problems, working in groups and communicating	Upon completion of this module, students should have an understanding of <ul style="list-style-type: none"> • scientific measurement and calculations: units, scalars and vectors • mechanics: kinematics in one and two dimensions, forces and Newton's laws of motion as well as the work-energy theorem • hydrostatics: mass density, pressure, Pascal's principle, Archimedes' principle • thermodynamics: temperature, thermal expansion, heat • waves and sounds: the nature of waves, periodic waves, the nature of

						effectively as is needed for Environmental Health.	sound, the speed of sound and the sound intensity • Electricity: electric forces and electric fields as well as the electric circuits. Experimental laboratory work will be conducted to aid delivery of these learning objectives
Planning for Built Environment	PFBEE02	100%	0%	6	12	This module is intended as part of the acquisition of competence for all people who are involved in, or who intend to be involved in assessing, undertaking or administration of environmental health management projects, with a variety of organisations, be it government at various levels, private companies or non-governmental organisations. Applied competence against all learning outcomes pursued in this module will enlarge the general understanding and technical insight of the successful student in the role of the built environment, housing, ecology and sanitation. This involves the effective planning of housing, provision of sanitation, selection of sites for building and evaluation and drawing of building plans according to building regulations	<p>At the end of this module, you should be able to do the following:</p> <ul style="list-style-type: none"> • Apply the relevant building legislation to plans and building structures and to make appropriate recommendations to improve plans (<u>Range:</u> Scrutinize plans, application processes, make recommendations on suitable drainage and factors relating to size, building materials, ventilation and structure). • Describe the different structures in buildings and structures (<u>Range:</u> residential and industrial premises) • Describe the provision of housing according to technical and social requirements, housing layout and space and density requirements. (<u>Range:</u> to be

						and guidelines. Applications should reflect knowledge of the following fields of expertise: legislation, building structures, drainage, ecological effects and social and physical effects of poor housing provision	<p>related to the most common problems including health, mental and social aspects</p> <ul style="list-style-type: none"> • Identify the requirements for healthy housing • Describe the appropriate sanitation systems and their requirements (selection criteria for most suitable toilet system)
Research Methodology: Biostatistics	RMBEHB3	100%	0%	7	10	The purpose of the module is to introduce and prepare students studies to conduct research, from conception to analysing the data collected and understand, apply various data collection techniques as well as advantages and their disadvantages.	<p>Students should be able to:</p> <ul style="list-style-type: none"> • Explain how research produces scientific knowledge Describe the phases in the research process. • Differentiate between the qualitative and quantitative approaches. • Describe the setting of the research aim and objectives in relation to prioritized needs and problems. • Describe, select and design instruments used for data collection and measurement e.g. Questionnaire. • Describe how the quality of data can be ensured from design, data collection and data analysis stage in the research process. (Data management) <p>To perform descriptive and inferential statistics</p>
Research Methodology: Module A	RMENVA2	100%	0%	6	8	The purpose of the module is to equip the learner with skills and knowledge related to research	<ul style="list-style-type: none"> • Introduction to Professional Conduct and Ethics • Steps in a research process • The Literature

						methods, theories and practices so as to be able to plan and participate formal and informal research in Environmental Health field.	review <ul style="list-style-type: none"> • Study Design • Sampling • Data collecting • Measurement in Research • Data Analysis • Research Report
Research Project	RPENV04	100%	0%	8	30	Curriculum of this module is research based, of which the student will have one full year to complete the module. Formal research is undertaken as a requirement. The research project lays a sound foundation for any research project that in future might cross their path. It involves applying the principles that student have learned in the subject Research Methodology. In this module of research project, students are exposed to the basic concepts of research and definitions that are important to understanding the fundamental principles and constructs behind research such as purpose, methods and the various types of research. The Faculty Higher Degrees and Research Ethics Committees (FHDC and REC) have guidelines which outline the research proposal submission process for students	Student must be able to demonstrate an independent research skill and be able to follow all the steps necessary to complete their research. Students are further expected to demonstrate their presentation skills and be able to do their research without plagiarism.

Sociology 1A	SOC1AA 1	50%	50%	9	16	<p>The course starts off with examining the concepts Power and the State; we locate the discussion within the theoretical frameworks of the Functionalist, Weberian and Marxist perspectives on power and the state. × The second section of the module explores the concept of work, as a purposeful activity and the evolution of the concept of work. More importantly, we examine how work transforms society and is transformed by society.</p>	<p>Compare different approaches to power and the state Highlight key differences between Marxist, Weberian, and Functionalist frameworks Distinguish between the notion of the state and government Explain, using examples, the three different types of states Explain the problems related to the definition of work Critically discuss classical approaches to work, the labour process and unemployment Apply these theoretical questions to the contemporary world Understand what the Fourth Industrial Revolution means for the new world of work and Higher Education in South Africa Demonstrate these abilities in a structured and concise academic essay.</p>
Sustainability Development & Ecology	SDEEH0 1	100%	0%	5	8	<p>To introduce the students to the concepts of sustainability and sustainable development, environmental planning, ecological fundamentals, environmental ethics, environmental risk, and environmental and resource economics. It also introduces the fundamentals of Environmental</p>	<p>At the end of this module, you should be able to do the following:</p> <ul style="list-style-type: none"> • Define sustainable development • Describe the link between environment and health • Changing pressures on health and the environment • Describe the ecological environment as a complex and dynamic system • Describe and understand the abiotic and biotic components of the ecosystems • Describe

						Impact Assessment (EIA), Integrated Environmental Management (IEM), and Strategic Environmental Assessment (SEA) and focuses on spatial concepts and principles of spatial planning, issues such as land tenure, settlement layout and morphology and land use management, spatial development, environmental management, housing, local government, and land reform.	possible disasters or hazards that may impact negatively on the ecological environment <ul style="list-style-type: none"> Describe Environmental Impact Assessment (EIA) as a form of environmental management and planning tool Describe the legal aspects of sustainable development Describe actions that can be taken to promote sustainable development
Water Quality and Waste Management	WQAWMO 3	100%	0%	7	20	The module aims to prepare students for the infection prevention related to Water Quality and Waste Management in healthcare setting, Secondly it aims to help students gain an understanding of healthcare associated infections (HCAI) including types of infections, organisms responsible, how this can be monitored, proper cleaning and disinfection protocols etc. This includes the aspects of antimicrobial resistance and resistance towards chemicals used in the cleaning	<ul style="list-style-type: none"> Understand the types of water in the healthcare facilities and how that will impact on staff and patient health. Understand the concepts of hygiene as it relates to hand, personal and the clinical environment. Discuss the occurrence and spread of E. coli (as indicator of faecal pollution) on surfaces in the various health settings. Demonstrate knowledge of the various hygiene related pathogens and the diseases they cause Distinguish between various forms of water related diseases and their impact on society Illustrate understanding of the

						process.	<p>distribution of pathogens in communities and how this can be interrupted</p> <ul style="list-style-type: none"> • Demonstrate and understand the effective hand washing technique and the influence on water sampling • Define a hazardous or toxic waste product. • Discuss properties of hazardous waste. • Describe how infectious, toxic or hazardous waste is being land filled. • Know how to avoid waste generation than to treat or dispose of waste • Determine whether or not a material must be considered infectious or hazardous chemical waste; • Determine the correct hazard category. • Analyse the components of hazardous waste by type; • Sorting and separation of each and every component is necessary;
Water Quality and Waste Management	WQAWMO4	100%	0%	8	20	<p>The purpose of this module is to equip the students with the knowledge that will enable them to explore through research the various technology options and innovation for sustainable water quality management and integrated waste management in various settings that protects both public health and the environment.</p>	<ul style="list-style-type: none"> • Discuss the characteristics, composition, supply, use and management of water • Identify and explain the methods of on-site innovative water treatment technology • Individual Accountability and Citizenship for sustainable water sources in South Africa • Determine and explain the importance of the waste management hierarchy. • Evaluate on the type

							<p>and nature of wastes by interpreting the total volumes; and assessing the handling, storage, transportation and disposal methods to be adopted and the potential environmental and health impacts;</p> <ul style="list-style-type: none"> • Assess the activities involved for the proposed and determine the type, nature and estimated volumes of waste to be generated; • Identify any potential environmental impacts from the generation of waste at the site; • Recommend appropriate waste handling and disposal measures / routings in accordance with the current legislative and administrative requirements, and; • Categorize waste material for disposal considerations. • Describe the importance and factors affecting generation rates of waste. • Determine and compile the essential elements contain in a waste management plan • Classify and compare different methods of environmental education.

MASTER OF PUBLIC HEALTH (M9EN3C)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
African Health System, Health and Environmental Politics and Management	AHSC2C2	100%	0%	9	16	The module explores the impact of existing health systems and the associated political environment on continental demographics, water, and ecosystems critical for human survival, health, food and energy.	<ul style="list-style-type: none"> – Ability to compare and contrast the burden of disease between high-income countries and middle-income – Identifying factors that contribute to disease prevalence among different income groups. – Interpret and analyse epidemiological data to assess the distribution of major diseases and the burden of disease across different countries. – Explore factors that impact health systems and discuss strategies to address these challenges. – Evaluate the challenges of brain drain and workforce movement from public to private sectors in healthcare. – Discuss the impact of social determinants on health outcomes and propose interventions to mitigate their effects on the healthcare system. – Develop strategies for designing health system programmes to achieve global health targets and improve health system performance.

Emerging National and Continental Environmental Health Challenges	ENCC2C 1	100%	0%	9	16	<p>The modules aim to highlight the impact of emerging national and continental environmental health challenges on continental demographics, water, ecosystems critical for human survival, health, food & energy, etc.</p>	<ul style="list-style-type: none"> – Explain key (emerging) environmental and occupational health challenges at local, regional and global levels. – Discuss the impacts of (emerging) environmental and occupational challenges on natural resources such as water, air, energy, plants and wildlife in relation to human health. – Investigate the intricate relationships between human health and the environment at local, national, regional and global. – Evaluate management strategies for emerging environmental and occupational health challenges. – Design and implement management strategies for emerging environmental and occupational health challenges.
Environmental Epidemiology, Biostatistics and Research Methodologies A	EEBCAC 1	100%	0%	9	10	<p>The module introduces and demonstrates the relevance of epidemiology, biostatistics and research methodologies to public health. It provides the foundation for public health surveillance and investigations.</p>	<ul style="list-style-type: none"> – Apply scientific methodologies for conducting health risk and impact assessments based on WHO and other acceptable standards. – Analyse case studies with relevant scenarios and challenges in a country. – Enumerate, understand, mitigate and manage associated risks within the context of a country or region in question.

Environmental Epidemiology, Biostatistics and Research Methodologies B	EEBCBC1	100%	0%	9	10	The module introduces and demonstrates the relevance of epidemiology, biostatistics and research methodologies to public health. It provides the foundation to public health surveillance and investigations.	<ul style="list-style-type: none"> – The relevance of epidemiology, relevant to environmental health practice can be demonstrated. – The interpretation and critique of epidemiological research are applied. – The choice of an appropriate study design; collection of data; the control of bias; analysis, confounding and the interpretation of results are applied appropriate to health risks.
Environmental Health Risk and Impact Assessment	EHRC2C1	100%	0%	9	10	The purpose of the module is to introduce Environmental Health Risk and Impact Assessment in the context of Public Health within a region or country's health system.	Apply scientific methodologies for conducting health risk and impact assessments based on WHO and other acceptable standards. Analyse case studies with relevant scenarios and challenges in a country. Enumerate, understand, mitigate and manage associated risks within the context of a country or region in question.

Health Promotion and Health Behaviour	HPBC2C 1	100%	0%	9	10	The purpose of the module is to introduce Health promotion and health behaviour.	<ul style="list-style-type: none"> – Articulate concepts and principles as well as core competencies of health promotion. – Articulate health promotion theories and models with accepted health promotion values and outcomes. – Explain the characteristics of “healthy” public policies. – Discuss the roles of advocacy, enablement, mediation, health communication and social marketing in health promotion. – Explain the concept of sustainability of health programmes. – Articulate the health promotion theories, models, strategies and interventions for the prevention of various health challenges. – Design and evaluate health promotion interventions for various health challenges.
Health Systems, Funding Modules and Health Economics	HSFC2C 2	100%	0%	9	16	This module is designed to provide students with foundational knowledge in health economics, enabling them to interpret and appraise applied studies in the field. Students will learn how resources are mobilised, pooled, and used to finance healthcare strategies. The module also addresses public health reform, healthcare systems, and methods of hospital financing. It introduces diagnostic-related groupings as a methodology for	<ul style="list-style-type: none"> – Understand healthcare markets, focusing on the basic concepts of health sector-specific economic valuation. – Demonstrate an understanding of the role of government and health economists in planned health systems and markets as well as in addressing healthcare market failures. – Demonstrate knowledge of local, national, and global health strategies in the context of health financing. – Identify key characteristics of publicly funded health services and critique public funding models for healthcare.

						budget appropriation and key health-related financial management issues.	<ul style="list-style-type: none"> – Critique National Health Insurance (NHI) in the context of Universal Health Coverage (UHC). – Explore Public Sector Payment Mechanisms and Methods for Revenue Collection – Discuss solutions for improving public funding. – Demonstrate an understanding of health economics through a review of case studies.
Principle and Practice of Environmental Health A	PPECAC 1	100%	0%	9	10	The purpose of the module is to introduce Environmental and Occupational Health in the context of Public Health within a region or country's health system.	Contextualise Public Health within a region and the relevant countries' health systems, with specific focus on Environmental Health.
Principle and Practice of Environmental Health B	PPECBC 1	100%	0%	9	10	This module evaluates and debates occupational and environmental health programs/systems with reference to strengths, weaknesses, core values, ethos of current health reforms and global public health priorities.	Evaluate and debate occupational and environmental health programmes/systems with reference to strengths, weaknesses, core values, ethos of current health reforms and global public health priorities.
Minor Dissertation A	EMDCA C2	100%	0%	9	2	The module aims to introduce research methods, specifically emphasising their application in Environmental and Occupational Health.	<ul style="list-style-type: none"> – Identify and articulate research problems relevant to E&OH and formulate a clear and concise research topic. – Develop the ability to provide a comprehensive introduction and background, literature review, contextual information and

							<p>theoretical frameworks.</p> <ul style="list-style-type: none"> – Understand the importance of defining the research's purpose, significance, and justification; explain the relevance and potential impact, and justify the need for further investigation. – Develop a concept note comprising key components i.e. research problem, objectives, methodology, expected outcomes, and potential implications.
Minor Dissertation B	EMDCB C2	100%	0%	9	2	<p>The module introduces the foundational elements of the research process, from theoretical exploration to practical application.</p>	<ul style="list-style-type: none"> – Compile research questions using the SMART principle (i.e. specific, measurable, achievable, relevant, and time-bound). – Articulate the overarching aim that is aligned with the research questions and objectives. – Develop objectives that delineate the outcomes of the research. – Understand the role of hypotheses in guiding research design, data collection, and data analysis processes. – Develop a literature search strategy to identify relevant scholarly sources and empirical studies related to the research topic. – Critically evaluate and synthesise existing literature to inform the theoretical and conceptual framework of the research study, where applicable. – Define the scope and boundaries of the research through careful delimitation considering the

							population demographics, geographical location, time frame, and methodological constraints to ensure the feasibility and rigour of the research.
Minor Dissertation C	EMDCC C2	100%	0%	9	2	This module provides key considerations and methods involved in selecting and designing research studies in the context of Environmental and Occupational Health.	<ul style="list-style-type: none"> – Differentiate between various research study designs, understanding their strengths, limitations, and applications. – Understand the importance of selecting an appropriate study site. – Identify and define the target study population. – Select study participants to ensure the representativeness and generalisability of the research findings. – Define the exposure and outcome variables enabling hypothesis testing and data analysis. – Learn about the difference between probability and non-probability sampling techniques. – Estimate the sample size to achieve adequate statistical power and precision.
Minor Dissertation D	EMDCD C2	100%	0%	9	2	This module aims to equip students with knowledge and skills related to data collection instruments and to empower them to critically evaluate their strengths and limitations.	<ul style="list-style-type: none"> – Understand the differences between quantitative and qualitative data collection approaches and well as the difference between primary and secondary data sources. – Learn key concepts and principles related to data collection (i.e. data quality, reliability, validity, availability and accessibility). – Understand the purpose of using existing datasets,

							<p>surveys, interviews, focus groups, etc.</p> <ul style="list-style-type: none"> – Creating the appropriate data collection instrument/s (e.g. surveys, questionnaires, interview guides, and observation forms) that align with the proposed research. – Develop proficiency in categorising research variables into independent, dependent, confounding and control variables. – Compile data analysis plans tailored to the research objectives.
Minor Dissertation E	EMDCE C2	100%	0%	9	2	<p>This module's purpose is to equip students with the necessary skills and knowledge to effectively plan, budget, and ethically conduct research in the field of Environmental and Occupational Health.</p>	<ul style="list-style-type: none"> – Create realistic and achievable timelines for executing the research. – Understand the financial aspects of research, including budget development, cost estimation and resource allocation. – Understand ethical issues inherent in environmental and occupational health research and identify those specific to the proposed research. – Prepare and submit the research protocol for Departmental Research Committee (DRC) review and approval following institutional guidelines.
Minor Dissertation F	EMDCF C2	100%	0%	9	2	<p>The module aims to guide students through finalising their research proposals, obtaining approval from the Faculty of Health Sciences Higher Degrees Committee (FHDC) and the Research</p>	<ul style="list-style-type: none"> – Refine and finalise the protocol based on feedback from DRC, ensuring completeness, coherence, and clarity in preparation for submission to the FHDC and REC. – Submit the final approved protocol with

						Ethics Committee (REC), and drafting the initial chapters of their mini dissertations.	<p>FHDC application form.</p> <ul style="list-style-type: none"> – Prepare and submit final approved protocol and relevant REC application form to the REC for ethical review and approval. – Drafting of Chapters 1 to 3 of the mini dissertation.
Minor Dissertation G	EMDCG C2	100%	0%	9	16	This module aims to guide students in assessing the validity and reliability of selected data collection instruments.	<ul style="list-style-type: none"> – Understand the purpose and significance of pilot studies, the planning and execution thereof, including their role in assessing the feasibility, validity and the reliability of data collection instruments. – Process the data collected from the pilot study to evaluate the validity and reliability and identify areas for refinement or improvement. – Develop plans for data collection, including participant recruitment and quality assurance measures prior to data collection.
Minor Dissertation H	EMDCH C2	100%	0%	9	16	This module guides students through the final stages of their research project, focusing on data quality and analysis using appropriate statistical methods and interpretation of their findings.	<ul style="list-style-type: none"> – Acquire techniques for data cleaning to ensure the integrity of their dataset for analysis. Learn about coding and transforming variables as necessary, ensuring compatibility with statistical software and analysis techniques. – Conduct data analysis using appropriate statistical methods, such as descriptive statistics, inferential statistics, regression analysis, or qualitative data analysis techniques, depending on the nature of the research. – Learn the art of writing up research findings in a clear and concise manner,

						<p>presenting descriptive statistics, tables, figures and other visual aids to illustrate key findings.</p> <ul style="list-style-type: none"> – Interpret the findings in the context of existing literature, theoretical frameworks, and objectives, emphasising the significance and implications for environmental and occupational health practice and policy. – Critically evaluate the strengths and limitations of the research methods, data collection procedures, and analytical approaches, considering bias, reliability, validity, and generalisability factors. – Draw conclusions from the findings, highlighting key insights, implications, and areas for further research. Provide recommendations for practice, policy, or future. – Draft Chapters 4 and 5 of the mini dissertation, synthesising the above into a cohesive and scholarly document meeting the requirements of academic standards.
Minor Dissertation I	EMDCIC 2	100%	0%	9	16	<p>This module aims to prepare students for examination and enable them to prepare a draft manuscript of their research findings.</p> <ul style="list-style-type: none"> – Collaborate with supervisor/s to finalise the minor dissertation in accordance with the institution's guidelines. – Engage an external editor to review the dissertation, focusing on grammar, punctuation, clarity, and coherence to enhance the overall quality and readability. – Generate a TurnItIn or a similar AI and plagiarism

							<p>detection software report verifying the originality and authenticity of their work.</p> <p>– Complete all necessary examination forms and paperwork and submitted for examination.</p> <p>– Draft a publication of the research findings into a concise and scholarly format suitable for submission to scientific journals for potential publication.</p>

HS12.6 DEPARTMENT OF MEDICAL IMAGING AND RADIATION SCIENCES (MIRS)

BACHELOR OF DIAGNOSTIC RADIOGRAPHY (B9M01Q)

BACHELOR OF DIAGNOSTIC ULTRASOUND (B9M03Q)

BACHELOR OF NUCLEAR MEDICINE (B9M02Q)

BACHELOR OF EADIATION THERAPY (B9M04Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
------	------	--------------	--------------	-------	---------	---------	---------

Anatomy and Physiology 1	ANP01Y1	100%	0%	5	12	<p>The module will enable students to gain the relevant anatomy and physiological background applicable to MIRS in the following topics: Terminology, Basic Chemistry, The Cell, Basic Histology, Skeletal system, Osseous Tissue, Female Reproductive system, Endocrine system, Nervous system, Special senses, Cardiovascular system, Respiratory system, and Digestive system.</p>	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Identify and solve problems in which responses demonstrate that responsible decisions using critical and creative thinking have been made regarding basic Biological concepts. 2. Work effectively with others as a member of a team, group, organisation or community by means of project presentations. 3. Organise and manage oneself and one's activities responsibly and effectively by the attendance of lectures and self-study. 4. Collect, analyse, organise and critically evaluate information by means of preparation of the project. 5. Communicate effectively using visual, mathematical and/or language skills in the modes
--------------------------	---------	------	----	---	----	---	---

							<p>of an oral and written project presentation.</p> <p>6. Demonstrate an understanding of the world as a set of related systems by recognising that problem-solving contexts do not exist in isolation through the different Anatomical/Physiological/Biological concepts.</p>
Anatomy and Physiology 2	ANP01Y2	100%	0%	5	12	<p>The module will enable students to gain the relevant anatomy and physiological background applicable to MIRS in the following topics: Integumentary system, Lymphatic and Immune systems, Support and movement (musculoskeletal system), Male Reproductive system, Urinary system</p>	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Identify and solve problems in which responses demonstrate that responsible decisions using critical and creative thinking have been made regarding basic Biological concepts. 2. Work effectively with others as a member of a team, group, organisation or community by means of project presentations. 3. Organise and manage oneself and one's activities responsibly and effectively by the attendance of lectures and self-study. 4. Collect, analyse, organise and critically evaluate information by means of preparation of the project.

							<p>5. Communicate effectively using visual, mathematical and/or language skills in the modes of an oral and written project presentation.</p> <p>6. Demonstrate an understanding of the world as a set of related systems by recognising that problem-solving contexts do not exist in isolation through the different Anatomical/Physiological/Biological concepts.</p>
Applied Physics	APP01Y1	50%	50%	5	12	<p>Science module</p> <p>The purpose of this module is to provide a factual knowledge of definitions, methods and principles in Physics, and provide a broad background knowledge of basic Physics to aid in the understanding and interpretation of future scientific and technological development and to acquire the following life skills such as identifying and solving problems, working in groups and communicating effectively as is needed for the various disciplines in Radiography.</p>	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Describe Bohr's atomic model and its application in explaining the spectra of atoms. 2. State basic laws of electrostatics and current electricity and solve basic problems relating to electric circuits. 3. Describe the basic concepts that govern the magnetic effect of an electric current and perform calculations relating to these topics. 4. Define the physical quantities and concepts related to sound waves and geometrical optics

							as well as their uses in medicine. 5. Define the physical quantities and state the laws related to heat and gases and solve problems related to heat.
Applied Psychology	APY01Y3	100%	0%	7	12	The purpose of this module is to provide the student with knowledge of the overall and specific goals typical of communication in health practice; the importance of non-verbal elements of interactions, listening and awareness of various environments affecting health care. Additionally, the realities of specific aspects of communication such as conflict, cultural variations, misunderstandings and ethical issues will be explored.	On completion of this module a student should be able to: 1. Recognize the significance of effective interpersonal communication in the health professional. 2. Achieve effective communication by developing awareness within the health profession 3. Manage the realities of communication (conflicts, ethical issues and cultural variations) as a health professional
Diagnostic Clinical Practice 1	DCP01Y1	100%	0%	6	24	The primary purpose of this module is to progress on the knowledge, skills and experience that the student had obtained in first year. A student who passes this module will be able to function efficiently and responsibly, under supervision, within the health care team to produce quality radiographic images, assist with radiographic procedures and care for patients consistent with this level of training and education. The term	On completion of this module a student should be able to: 1. Perform routine and supplementary radiographic procedures to produce images of diagnostic quality pertaining to anatomical areas included in the 1st year syllabus. 2. Evaluate the quality of routine and supplementary radiographic images and perform image

						<p>care will be approached in a holistic fashion with the incorporation of bioethics, patient rights, human rights, the UJ-student charter and social determinants of health.</p>	<p>interpretation to identify normal and abnormal appearances.</p> <p>3. Perform safe and effective patient care in accordance with the patient's needs and departmental protocol to provide a quality service and to maintain the welfare of the patient.</p> <p>4. Apply the principles of human rights, ethics and relevant medical law which ensure the well-being of the patient.</p> <p>5. Apply the social determinants of health to promote patient centred care.</p>
Diagnostic Clinical Practice 2	DCP01Y2	100%	0%	7	30	<p>The primary purpose of this module is to progress on the knowledge, skills and experience that the student had obtained in first year. A student who passes this module will be able to function efficiently and responsibly, under supervision, within the health care team to produce quality radiographic images, assist with radiographic procedures and care for patients consistent with this level of training and education. The term care will be approached in a holistic fashion with the incorporation of bioethics, patient rights, human rights,</p>	<p>On completion of this module a student should be able to:</p> <p>1. Communicate effectively with members of a multidisciplinary team and the patient and their family members.</p> <p>2. Optimal patient care is demonstrated before, during and after imaging process.</p> <p>3. Radiographic images are evaluated in a theoretical context for diagnostic quality according to relevant evaluation criteria and to ensure that the</p>

						the UJ-student charter and social determinants of health.	<p>images conform to the medico-legal requirements.</p> <p>4. Images are evaluated for normal and abnormal radiographic appearances by applying integrated knowledge of anatomy, physiology and pathology in a theoretical and/or simulation context.</p> <p>5. A patient's clinical condition is assessed, and appropriate action taken when needed.</p>
Diagnostic Clinical Practice 3	DCP01Y3	100%	0%	7	24	The purpose of this module is to develop and build on the clinical competencies learnt in Diagnostic Clinical Practice 2 and required in a Diagnostic Radiographer in the Radiology Department.	<p>On completion of this module a student should be able to:</p> <p>1. Discuss and demonstrate appropriate patient care for the procedures.</p> <p>2. Communicate effectively with members of a multidisciplinary team and the patient and their family members.</p> <p>3. Write a reflective report.</p> <p>4. Discuss the attributes required in a professional diagnostic radiographer.</p> <p>5. Demonstrate clinical competency for the procedures presented in this module, Diagnostic Practice 3 and Specialised</p>

							Diagnostic Practice 3.
Diagnostic Clinical Practice 4	DCP01Y4	100%	0%	8	24	The purpose of this module is to develop and build on the clinical competencies learnt in Diagnostic Clinical Practice 3 and required in a Diagnostic Radiographer in the Radiology Department	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. 							effective teamwork and professionalism.
Diagnostic Practice 4	DIP01Y4	100%	0%	8	24	<p>The purpose of this module is to build on the learning in Diagnostic Imaging Practice 1, 2 & 3 and Diagnostic Clinical Practice 1,2 & 3. The examinations and procedures learnt in this module will enable you to function optimally in the clinical practice to produce quality imaging with a patient centred approach. The role of the diagnostic radiographer in interprofessional situations will be taught within this module to enable collaboration in the South African healthcare environment.</p>	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Explain and discuss the radiographic procedures included in this module. 2. Apply, integrate and analyse theory to/into clinical setting to ensure diagnostic radiographic images are produced in accordance with image evaluation criteria 3. Apply a holistic approach that is patient centred and considers radiation science principles, anatomy, physiology and pathology to ensure adherence to the ALARA principle and justification of an examination and limiting of ionising radiation. 4. Apply knowledge of radiographic anatomy and pathology to assess radiographic images in terms of pattern recognition to distinguish between normal and abnormal appearances. 5. Explain and discuss contrast media used in radiographic

						<p>procedures in terms of use, indications, contraindications and medico- legal implications</p> <p>6. Apply bioethical and human rights principles to ensure patient care, effective teamwork, interprofessional collaboration and professionalism.</p>
Education in Health	EIH01Y4	100%	0%	8	24	<p>The purpose of this module is to develop theoretical knowledge and competencies for clinical educators within the medical imaging and radiation science's context of work-integrated learning.</p> <p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Articulate the value, benefits and challenges of WIL in the higher educational context of medical imaging and radiation sciences program. 2. Compose a sound work placement program for WIL incorporating all related resources. 3. Design concrete examples of how Kolb's experiential learning theory would be applied in the context of your workplace to inform the design of work related learning outcomes, lesson plans and assessments. 4. Contextualize the strategies for an effective WIL program to your practice and explain how each would be implemented.

							5. Evaluate the role of simulation in health sciences education.
Imaging Informatics	IMT01Y4	100%	0%	8	24	The purpose of this module is to enable the student to function in the radiology environment in the use of PACS, RIS and HIS. Under supervision use PACS, RIS and HIS with regard to the POPI Act and bioethical principles	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Demonstrate an understanding of the role of IT in the radiology environment. 2. Explain the role of PACS, RIS & HIS within the Healthcare sector. 3. Discuss the ethical principles for PACS, RIS and HIS and the POPI Act. 4. This module requires you to fully engage with the PACS Administrators and IT personnel to apply your knowledge of PACS, RIS and HIS in clinical practice.
Imaging Technology 1	IMT01Y1	100%	0%	5	12	The purpose of this module is to introduce you to the basic concepts and principles of imaging technology used in radiographic imaging. After completion of the study units, you will have both practical and theoretical knowledge of how radiographic images are formed and recorded.	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Describe radiation and its discovery. 2. Define the principles of radiographic image formation in order to adjust the correct factors in obtaining a diagnostic x-ray image.

Imaging Technology 1	IMT02Y1	100%	0%	5	12	<p>The purpose of this module is to introduce the student to the physical principles of diagnostic ultrasound, and its interactions with human tissue, which allow its use as a valuable diagnostic imaging modality. The mastering of these principles, combined with the knowledge of ultrasound equipment, will develop a student who can operate the equipment competently and safely in the production of high quality diagnostic images. This module will form a basis for application in the clinical context.</p>	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Analyze the principles of ultrasound physics, which will allow application in the clinical context. 2. Demonstrate the principal components of medical ultrasound units. 3. Link the scientific knowledge of physics principles to the equipment for the production of quality ultrasound images. 4. Assess the sonographic image for technical quality and determine any necessary improvements. 5. Relate the known bio-effects of ultrasound in human tissue to potential bio-hazards.
Imaging Technology 2	IMT01Y2	100%	0%	6	24	<p>The purpose of this module is to build on the knowledge gained from imaging technology 1, and to introduce you to the more advanced concepts and principles of radiographic imaging. It gives you a basic understanding of digital imaging and its components, application of exposure techniques and image evaluation, principles of fluoroscopy,</p>	<p>On completion of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Acquire knowledge and understanding of Computed Radiography (CR) and Digital Imaging systems and apply principles of digital image formation, latent image processing and adequate image post-processing. 2. Apply the principles of

						computered tomography (CT) and magnetic resonance imaging (MRI).	radiographic image formation for static and dynamic imagings in order to adjust the correct factors. Analyse the diagnostic x-ray image and the impact of the delivered dose to the patient.
Management Principles and Practice	MPP01Y3	50%	50%	7	24	CBE module The purpose of this module is to introduce the student to the main themes and concepts of Business Management. The lectures, discussions and prescribed reading are designed to enable the students to understand and analyse these concepts in a practical manner.	On completion of this module a student should be able to: <ol style="list-style-type: none"> 1. Describe and explain the business environment 2. Understand the principles of planning and strategy formulation 3. Analyse and understand ethics and corporate social responsibility 4. Apply planning and decision-making aids 5. Describe and understand the human resource (HR) management function in the organisation
Nuclear Medicine Clinical Practice 1	NCP01Y1	100%	0%	6	24	The purpose of this module is to enable the student to disseminate good imaging practice. This is achieved by effectively practicing patient care and management, data acquisition of the prescribe organs including basic data manipulations and	At the end of this module the student should be able to do the following: <ol style="list-style-type: none"> 1. Discuss and demonstrate appropriate patient care for the procedures prescribed for this module.

						general laboratory management and elution of a generator. hot	<p>2. Communicate effectively with members of a multidisciplinary team and the patient and their family members.</p> <p>3. Demonstrate clinical competency for the procedures presented in this module.</p>
Nuclear Medicine Clinical Practice 2	NCP01Y2	100%	0%	7	30	<p>The purpose of this module is for the student to disseminate good imaging practice. This is achieved by effectively practicing patient care and management, data acquisition of the prescribe organs including data manipulations where applicable and general hot laboratory management and preparation of radionuclides in house.</p>	<p>At the end of this module, the student should be able to:</p> <ol style="list-style-type: none"> 1. Apply effective patient care and management before, during and after nuclear medicine investigative studies and treatments 2. Perform effectively all the prescribed imaging procedures and associated requirements to effectively produce diagnostic results for the management of patients referred to Nuclear Medicine 3. Function effectively in the nuclear medicine laboratories. <p>You will be assessed as competent if you can demonstrate that:</p> <ul style="list-style-type: none"> - Proper protocols and procedures are executed for patient preparation and care - Patient administration before, during and

							<p>after are properly managed for the wellbeing and further management of the patient</p> <p>- Good communication with complementary departments, as well as within the department, is maintained for the smooth running of the department</p> <p>- Appropriate acquisition protocols, patient position, procedures and final information presentations are selected and produced for optimum results in the management of patients and image</p> <p>4. Operate and perform quality control programmes in Nuclear Medicine department for optimum function.</p>
Nuclear Medicine Clinical Practice 3	NCP01Y3	100%	0%	7	24	<p>The purpose of this module is for you to disseminate good imaging practice. This is achieved by effectively practicing patient care and management, data acquisition and reconstruction of the prescribe organs and general radiopharmacy management, compounding radiopharmaceuticals and dispensing.</p>	<p>At the end of this module, the student should be able to:</p> <ol style="list-style-type: none"> 1. Discuss and demonstrate appropriate patient care for the procedures prescribed for this module. 2. Communicate effectively with members of a multidisciplinary team and the patient and their family members.

							<p>3. Write a reflective report</p> <p>4. Discuss the attributes required in a professional nuclear medicine radiographer.</p> <p>5. Demonstrate clinical competency for the procedures presented in this module.</p>
Nuclear Medicine Clinical Practice 4	NCP01Y4	100%	0%	8	24	<p>The purpose of this module is to advocate good imaging practice in the Nuclear Medicine Department and PET-CT facility. This is achieved by effectively practicing good patient care and management, specialized and PET-CT data acquisition and reconstructions, PET-CT hot laboratory management and radiopharmaceutical dispensing, acquisition protocols, procedure documentation and management.</p>	<p>At the end of this module you should be able to:</p> <ol style="list-style-type: none"> 1. Manage and practice good patient care holistically before, during and after Nuclear Medicine procedures. 2. Apply all prescribed quality assurance measures in the department. 3. Dispense all radiopharmaceuticals used in the PET-CT facility with emphasis on aseptic technique and safety precautions for handling of radioactive substances used for imaging. 4. Carry out imaging techniques as set out in this module. 5. Perform data manipulations associated with specialized imaging practice and PET-CT. 6. Manage and administrate the

							Nuclear Medicine department to ensure a quality Nuclear Medicine service.
Nuclear Medicine Instrumentation	NMI01Y2	100%	0%	6	12	The purpose of this module is to provide you with a basic understanding of the origin of radioactivity, the design and function of Nuclear Medicine Instrumentation.	<p>At the end of this module you should be able to:</p> <ol style="list-style-type: none"> 1. Apply knowledge and understanding of radiation physics and radiobiology as applied in Nuclear Medicine. 2. Utilize correct imaging instrumentation and accessories, (the gamma camera with specialised functions such as SPECT), nonimaging instrumentation, (scintillation probe, well counters, survey meters) and image processing instrumentation, in a range of nuclear medicine investigations and applications. 3. Perform and assure quality control programmes in Nuclear Medicine Instrumentation. 4. Apply the elementary principles of computer operation as applied to the acquisition, display and processing of Nuclear Medicine Images. 5. Apply basic principles of in-vitro counting of samples.

Nuclear Medicine Practice 1	NMP01Y1	100%	0%	6	24	The purpose of this module is to provide you with the theoretical knowledge and skills in Nuclear Medicine in the prescribed organ imaging procedures for this module in order to effectively and efficiently produce images of diagnostic quality.	At the end of this module you should be able to: 1. Apply the basic principles of nuclear medicine imaging in order to produce images of diagnostic quality. 2. Apply knowledge of disease state and processes to the imaging protocols and procedures. 3. Maintain appropriate patient management before, during and after procedures. 4. Utilize correct imaging instrumentation and accessories for the prescribed nuclear medicine investigations and applications 5. Apply the elementary principles of computer operation as applied to the acquisition, display and processing of basic Nuclear Medicine images.
Nuclear Medicine Practice 2	NMP01Y2	100%	0%	6	30	The purpose of this module is to provide the student with the theoretical knowledge and skills to function holistically in the prescribed nuclear medicine organ imaging in order effectively and efficiently produce images of optimum quality.	On completion of this module the student should be able to: 1. Perform specified Nuclear Medicine procedures and techniques appropriate to the clinical presentation in order to produce images of diagnostic Quality.

							<p>2. Apply knowledge of disease state and processes to the imaging protocols and procedures.</p> <p>3. Apply appropriate injection procedures.</p> <p>4. Maintain appropriate patient management before, during and after procedures</p>
Nuclear Medicine Practice 3	NMP01Y3	100%	0%	7	24	<p>The purpose of this module is to provide you with the opportunity to acquire knowledge, skills and experience to function effectively, under supervision, within the health care team to produce quality radiographic images, assist with radiographic procedures and care for patients consistent with this level of training and education.</p>	<p>On completion of this module the student should be able to:</p> <ol style="list-style-type: none"> 1. Perform specified Nuclear Medicine procedures and techniques appropriate to the clinical presentation in order to produce images of diagnostic quality. 2. Apply the knowledge of the production of radionuclides and radiochemical make-up of the prescribed radiopharmaceuticals. 2. Explain the application of the

							<p>prescribed radiopharmaceuticals used in clinical imaging.</p> <p>3. Apply knowledge of radiation effects and risk estimates which may induce radiation malignancies.</p>
Radiopharmacy 3	RPY01Y3	100%	0%	7	12	<p>The purpose of this module is to provide you with the opportunity to acquire knowledge and skills to function effectively in the use and application of radionuclides used in the diagnosis and treatment of disease which are prescribed in this learning guide.</p>	<p>At the end of this module a student should be able to:</p> <ol style="list-style-type: none"> 1. Apply the knowledge of the production of radionuclides and radiochemical make-up of the prescribed radiopharmaceuticals. 2. Explain the application of the prescribed radiopharmaceuticals used in clinical imaging. 3. Apply knowledge of radiation effects and risk estimates which may induce radiation malignancies.
Radiopharmacy 4	RPY01Y4	100%	0%	8	12	<p>The purpose of this module is to provide the student with the opportunity to acquire knowledge and skills in specialized and new developments in radiopharmacy. This is achieved by the determination of single photon emission radionuclides, radionuclides for positron emission tomography, interventional nuclear medicine and clinical trials in nuclear</p>	<p>At the end of this module the student should be able to:</p> <ol style="list-style-type: none"> 1. Understand various radionuclide production methods. Know which radionuclides/radiopharmaceuticals are appropriate for use in SPECT and PET imaging; nuclear medicine therapy; monoclonal and

						medicine.	receptor applications. 2. Apply knowledge of interventional nuclear medicine. 3. Apply the principles and practices of clinical trials in Nuclear Medicine.
Research Methods	REM01Y3	100%	0%	7	24	<p>The purpose of this module is to help the student learn to employ independent research and self-study strategies to develop problem solving, critical thinking and evaluation skills with respect to a real-world problem in the educational environment or clinical practice. It is envisioned that the knowledge and skills gained will aid foster a positive perception of research among students and highlight the importance of collaborative research and the relevance of empirical evidence to guide professional practice.</p>	<p>At the end of this module, the student should be able to:</p> <ol style="list-style-type: none"> 1. Accurately conceptualize a research topic, question(s) and aim(s) according to acceptable research norms and principles. 2. Review, critique and summarize the literature. 3. Design an execution plan for the research development with clearly stated objectives, timelines and costing. 4. Develop a research proposal in line with the Faculty Guidelines as the framework for your research project in the succeeding year-year 4. 5. Apply basic principles in research to demonstrate your understanding of the certain concepts and how they translate in practice.

Research Project 4	RPR01Y4	100%	0%	8	30	The purpose of this module is to allow the student to use the knowledge, skills and attitudes obtained throughout enrolment at MIRS, to conduct research in a responsible manner, by applying the research specific knowledge acquired in REM01Y3. In addition, students should contribute in a positive manner to foster a research climate in the medical imaging and radiation sciences sector.	At the end of this module, the student should be able to: 1. Function efficiently in a team context. 2. Prepare and submit a proposal to a research ethics committee and obtain ethical clearance. 3. Collect and analyse data using scientific methods and according to the plan approved in the research proposal. 4. Write up a research report inclusive of a review of applicable literature, according to undergraduate requirements. 5. Disseminate the research results through various means to appropriate audiences, to add to the existing body of knowledge and foster a positive research climate.
Specialized Diagnostic Practice 3	SDP01Y3	100%	0%	7	24	The purpose of this module is to build on the knowledge gained from Diagnostic Practice 1 and 2 and introduces you to specialized imaging techniques, related anatomy, pathology and equipment. It provides you with the clinical knowledge to understand specialized procedures, research	At the end of this module, the students should be able to: 1. Evaluate specialised techniques and equipment in order to relate their suitability to the suspected pathology within the radiology department.

						<p>and problem solving to work independently. Integration of knowledge gained on technique, equipment, anatomy, pathology and basic pattern recognition skills allows you to identify normal and abnormal appearances on a radiograph. This module provides you with the knowledge to enable you to source and critique a journal article using scientific research parameters.</p>	<p>2. Assess the developments in techniques and protocols in order to produce high quality diagnostic images using the most current practice and protocols.</p> <p>3. Apply knowledge and skills to perform and adapt diagnostic techniques applicable to the age and clinical presentation of the patient.</p>
Specialized Diagnostic Practice 4	SDP01Y4	100%	0%	8	12	<p>The purpose of this module is to build on the knowledge gained from Diagnostic Practice 1, 2 and 3 and Specialized Diagnostic Practice III. It provides you with the clinical knowledge to understand specialized procedures, research and problem solving to work independently. Integration of knowledge gained on technique, equipment, anatomy, pathology and basic pattern recognition skills allows you to identify normal and abnormal appearances on a radiograph. This module provides you with the knowledge to enable you to source and critique a journal article using scientific research parameters</p>	<p>At the end of this module, the students should be able to:</p> <p>1. Demonstrate the ability to choose appropriate modalities and protocols in relation to the indications presented upon examination request</p> <p>2. Will be able to identify gaps between the theoretical knowledge acquired and the Clinical Practice issues that they experience.</p> <p>3. Apply knowledge and skills to perform and adapt diagnostic techniques applicable to the age and clinical presentation of the patient.</p>

Specialized Ultrasound	SUS01Y3	100%	0%	7	12	<p>The purpose of this module is to develop the clinical competencies of a Diagnostic Sonographers at a third-year level and will enable the students to apply the theory of specialized ultrasound scanning techniques and protocols pertaining to solid organ transplantation, haemodialysis access and tropical disease within the clinical environment.</p>	<p>At the end of this module, you should be able to:</p> <ol style="list-style-type: none"> 1. Integrate knowledge of Anatomy, Physiology and Pathology, to select the correct sonographic protocol and equipment applicable to a specific anatomical region. 2. Describe sonographic protocols of the most frequently encountered examinations in order to produce the required images for each examination. 3. Employ independent research and self-study strategies to develop problem solving, critical thinking and evaluation skills with respect to clinical situations. 4. Apply pattern recognition criteria in order to determine normal and aberrant sonographic appearances, which may indicate pathology. 5. Critically assess and perform responsible patient care to ensure patient welfare and adhere to basic principles of human rights and professional ethics.
---------------------------	---------	------	----	---	----	---	---

							6. Critically assess the sonographic images and apply pattern recognition to determine normal and abnormal ultrasound appearances.
Specialized Ultrasound	SUS01Y4	100%	0%	8	12	The purpose of this module is to develop the clinical competencies of a Diagnostic Sonographers at a fourth-year level and will enable the students to apply the theory of specialized ultrasound scanning techniques and protocols pertaining to emergency ultrasound, lung ultrasound and theranostics and the ethical issues that arise from them.	<p>At the end of this module, you should be able to:</p> <ol style="list-style-type: none"> 1. Integrate knowledge of Anatomy, Physiology and Pathology, to select the correct sonographic protocol and equipment applicable to a specific anatomical region. 2. Describe sonographic protocols of the most frequently encountered examinations in order to produce the required images for each examination. 3. Employ independent research and self-study strategies to develop problem solving, critical thinking and evaluation skills with respect to clinical situations. 4. Apply pattern recognition criteria in order to determine normal and aberrant sonographic appearances, which may indicate pathology.

							<p>5. Critically assess and perform responsible patient care to ensure patient welfare and adhere to basic principles of human rights and professional ethics.</p> <p>6. Critically assess the sonographic images and apply pattern recognition to determine normal and abnormal ultrasound appearances.</p>
Therapeutics	THR01Y3	100%	0%	7	12	<p>The primary purpose of this module is to provide you with a broad understanding in the application of therapeutic radionuclides, imaging and the management of patients who receive radionuclides for treatment; this will be coupled with scientific applications and professional growth in practicing nuclear medicine.</p>	<p>At the end of this module, you should be able to:</p> <ol style="list-style-type: none"> 1. Apply and understand the rational for therapeutic nuclear medicine. 2. Apply scientific skills and technologies to the clinical presentation for the production of optimum image quality in the therapeutic learning content. 3. Demonstrate an understanding of the nuclear medicine therapeutic procedures. 4. Apply research principles and skills and develop a research climate in nuclear medicine.
Treatment Planning & Dosimetry 1	TPD01Y1	100%	0%	6	12	<p>The purpose of this module is to introduce the student to basic treatment planning principles</p>	<p>At the end of this module you should:</p>

						and radiation therapy related apparatus.	<p>1. Be able to describe target volumes according to the ICRU recommendations</p> <p>2. Have the knowledge to select the appropriate beam modifying devices for accurate treatment planning and delivery</p> <p>3. Be able to perform a simulation procedure accurately and logically for cancer of the cervix and sarcomas appropriately</p> <p>4. Be able to draw and evaluate a two dimensional (2D) dose distribution</p> <p>5. Be able to create and evaluate 3D treatment plans</p> <p>6. Accurately formulate a “set-up” instruction for the implementation of the selected treatment plan</p> <p>7. Able to interpret and evaluate a treatment prescription</p> <p>8. Be able to describe the treatment protocols used routinely in the department.</p>
Treatment Planning & Dosimetry 2	TPD01Y2	100%	0%	6	24	The purpose of this module is to introduce the student to the basic radiobiological concepts and the role of diagnostic radiography, nuclear	<p>At the end of this module, the student should be able to:</p> <p>1. POSTGRADUATE DIPLOMA IN MIDWIFERY (E9MW1Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Ethical Legal Professional Frameworks	ELP8X01	100%	0%	8	8	The purpose of this module is to: Develop the specialist students' knowledge, attributes related to the ethical-legal-professional frameworks in the provision of comprehensive care to women throughout their reproductive cycle, families and communities.	The midwife specialists will: Practice and facilitate midwifery care within ethical-legal parameters of the profession. Utilize evidence-based practices to solve contextual problems and develop policies and guidelines within the context of midwifery. Facilitating lifelong learning and self-directedness to sustain competence. Facilitate advocacy for midwifery practice through collaboration with all stakeholders. Engage in planning, commissioning and managing of a midwifery unit.
Research	REN8XY1	100%	0%	8	10	The specialist student will be able to identify the problem, diagnose and recommend opportunities for improvement based on the developed research capacity and acquired research expertise in midwifery.	The midwife specialists will: Engage in scholarly activities to inform evidenced based midwifery practice. Utilize, manage and communicate data to support decision-making and research.
Normal and Abnormal Pregnancy	NAP8X01	100%	0%	8	8	To empower the midwife specialist student with knowledge, skills and values needed during the nursing process and to practice within ethical-legal-	To empower the midwife specialist student with knowledge, skills and values needed during the nursing process and to practice within ethical-legal-professional parameters of the midwife, to assess, plan,

						professional parameters of the midwife, to assess, plan, implement, manage the woman and her family during preconception, and antenatal period.	implement, manage the woman and her family during preconception, and antenatal period.
Normal and Abnormal Labour	NAL8X02	100%	0%	8	8	To empower the midwife specialist student with knowledge, skills and values to use during the nursing process and to practice within ethical-legal-professional parameters of the midwife, to promote, restore and maintain the health of individuals within the family during normal and abnormal labour.	Demonstrate the knowledge, understanding of the physiology of normal and abnormal labor. Demonstrate the knowledge, understanding and skills to apply nursing process in management of high-risk pregnant woman during labor, within ethical, legal, and professional frameworks. Use appropriate skills during the mechanism of labor to prevent avoidable complications during labor. Manage high-risk pregnant women presenting with obstetrical emergencies.
Clinical Practice in Midwifery	CPM8XY1	100%	0%	8	40	To empower the midwife specialist student with knowledge, skills and values needed during the nursing process and to practice within ethical-legal-professional parameters of the midwife, to assess, plan, implement, manage the woman and her family during preconception, and antenatal period.	Demonstrate the ability utilize knowledge, skills and values to practice within the ethical, legal and professional frame works to assess, plan, implement necessary interventions to manage the woman and preconception, and the antenatal period comprehensively.
Postnatal Care	PSC8X02	100%	0%	8	8	To empower the midwife specialist student with knowledge, skills	Demonstrate the knowledge and understanding of

						and values to use during the nursing process and to practice within ethical-legal-professional parameters of the midwife, to promote, restore and maintain the health of individuals within the family during postnatal care.	<p>physiologic homeostasis during puerperium. Use nursing process to manage adaptation in a high-risk postnatal woman and her family, within ethical, legal and professional frameworks.</p> <p>Demonstrate the knowledge and understanding of the nursing process during comprehensive management of a high-risk postnatal woman within legal, ethical and professional frameworks.</p> <p>Apply nursing process in management of obstetrical emergencies during postnatal care, using the steps of the nursing process, within ethical, legal and professional frameworks.</p>
The Neonate	NEO8X02	100%	0%	8	8	To empower the midwife specialist student with knowledge, skills and values to use during the nursing process while practicing within ethical-legal-professional parameters of the midwife, to promote, restore and maintain the health of individuals within the family during neonatal care.	<p>Demonstrate the ability to apply the nursing process in management of physiological changes that occur at birth in the high-risk neonate's transition to extra-uterine homeostasis while practicing within ethical, legal and professional frameworks.</p> <p>Demonstrate the knowledge and understanding to apply nursing process during comprehensive management of a high-risk neonate within the legal, ethical and professional frameworks.</p> <p>Demonstrate the ability to apply the nursing process during comprehensive management of danger signs of a high-risk</p>

							neonate within ethical, legal and professional frameworks. Demonstrate the ability to apply the nursing process in the management of complications of a high-risk neonate within ethical, legal and professional frameworks.
Clinical Practice Midwifery 2	CPM8XY2	100%	0%	8	40	To empower the midwife specialist student with knowledge, skills and values to use during the nursing process and to practice within ethical-legal-professional parameters of the midwife, to promote, restore and maintain the health of individuals within the family during labour, postnatal and neonatal care.	Demonstrate the ability utilize knowledge, skills and values to practice within the ethical legal framework in the management of a low and high-risk woman during the intrapartum, postnatal and neonatal periods to promote, restore and maintain the health of individuals comprehensively while practicing within ethical, legal and professional frameworks.

POSTGRADUATE DIPLOMA IN CRITICAL CARE NURSING (ADULT) (E9IC1Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Content
Ethical Legal Professional Frameworks	ELP8X01	100%	0%	8	8	The purpose of the module is to develop a competent specialist adult critical care nurse with appropriate knowledge, skills and attitudes needed, the application of the nursing process, within the ethical-legal-professional framework to promote, restore and maintain the health of individuals,	The specialist student will be able to practice and facilitate specialised adult critical care within ethical-legal-professional parameters of the nursing profession.

						families, groups and communities during their training as caring professionals. To provide a range of comprehensive individualised, culturally sensitive care, in line with de-colonisation, to individuals, families, groups and communities. Specialised best care practice nursing which is evidence-based to promote, prevent, cure, rehabilitate and refer diseases and conditions related to lifestyle and burden of diseases. This will enable the specialist adult critical care nurse to maximise healthcare of the South African population.	
Research	REN8XY1	100%	0%	8	10	The purpose of this module is to provide the specialist student with knowledge skills and values to enable them to identify the problem, diagnose and recommend opportunities for improvement based on the developed research capacity and acquired research expertise in a critical care discipline.	Module outcome: The specialist student will be able to identify the problem, diagnose and recommend opportunities for improvement based on the developed research capacity and acquired research expertise in a critical care discipline.
Cardiology and Cardiothoracic Surgery	CCS8XY1	100%	0%	8	8	The purpose of this module is to provide the critical care specialist student with knowledge, skills and values to able	Upon completion of critical care modules, the learner will be able to contribute to the critical care community in terms of the following:

						to assess, plan, implement, manage and evaluate the advanced and specialised medical and surgical conditions of the cardiology system of the critically ill patient within the legal-ethical framework of the nursing profession, basic and advanced sciences and family relations.	Improvement in the quality of critical care nursing/ health care through the implementation of effective decision-making and problem-solving skills within the community of critical care service delivery at local and national levels within the private and public curative health care service delivery context Promotion of ethical values in critical care nursing/ health care practice Improvement of critical care nursing/ health care within the private and public curative health care context through the implementation of decision-making and problem-solving skills Promotion of the health of the compromised critically ill individual and the special population including the critically ill paediatric patient; critically ill pregnant woman; as well as a critically ill elderly patient coming from the community with medical and surgical conditions through the implementation of clinical advocacy/ consultation and management and research skills
Pulmonology and Specific Pulmonary Conditions	PSP8X01	100%	0%	8	8	The purpose of this module is to provide the critical care specialist student with knowledge, skills and values with reference to the assessment, planning,	Upon completion of critical care modules, the learner will be able to contribute to the critical care community in terms of the following: □ Improvement in the quality of critical care nursing/ health care through the

						implementing, managing and evaluation of the advanced and specialised medical and surgical conditions of the pulmonology system in order to maintain ventilation in the critically ill patient, improve diffusion over the pulmonary membrane and to maximise the provision of oxygen to and removal of carbon dioxide from the tissue by means of quality clinical decision making within the legal-ethical framework of the nursing profession, basic and advanced sciences and family relations.	implementation of effective decision-making and problem-solving skills within the community of critical care service delivery at local and national levels within the private and public curative health care service delivery context <input type="checkbox"/> Promotion of ethical values in critical care nursing/ health care practice <input type="checkbox"/> Improvement of critical care nursing/ health care within the private and public curative health care context through the implementation of decision-making and problem-solving skills <input type="checkbox"/> Promotion of the health of the compromised critically ill individual and the special population including the critically ill paediatric patient; critically ill pregnant woman; as well as a critically ill elderly patient coming from the community with medical and surgical conditions through the implementation of clinical advocacy/ consultation and management and research skills.

							<p>diagnosis and proposed management and delivery of eye care products, therapy and medication to visually compromised people, with knowledge of minimum standards of optometric care and apply self-reflex learning strategies during interactions.</p> <p>Interact consultatively in the management and delivery of eye care products, therapy and medication to visually compromised people, with knowledge of minimum standards of optometric care and apply self-reflex learning strategies during interactions.</p> <p>Record and maintain legible, secure data and patient information while adhering to appropriate medico-legal ethics, health and safety regulations and codes of conduct stated in the patient charter.</p> <p>Manage and administer human, technical and other resources to ensure optimal diagnosis, prescription and delivery of eye and visual care products or services.</p>
--	--	--	--	--	--	--	--

							Apply self-reflexive learning strategies to continually improve the optometrically related service within health care services appropriate to the specific needs of the patient/client to ensure professional contribution to the needs of the society.
Chemistry 1C	CEM1CA 1	50%	50%	5	15	The primary purpose of this module is to develop the basic knowledge, understanding and practical skills of chemical principles and techniques of general chemistry as required for further modules in Optometry.	On completion of this learning event, the student should be able to: Distinguish between the different types of matter and their properties. Apply the principles of atomic and molecular structure to solve problems related to chemical bonding and molecular shapes. Predict the outcome of chemical reactions and write proper chemical equations Perform stoichiometric calculations. Discuss different acid-base theories and differentiate between weak and strong acids and bases. Apply IUPAC rules for nomenclature. Use scientific language to explain organic concepts. Analyse and

							<p>solve problems regarding physical and chemical properties of various functional groups. Demonstrate the ability to perform laboratory experiments safely and to interpret the results.</p>
Community and Environmental Optometry	COB01Y4	100%	0%	7	8	<p>The primary purpose of this module is to provide learners with the ability to:</p> <p>To provide the student with the necessary skills to identify, develop and design integrated visual health care programs by means of analysis and critical reasoning. The module also provides the student with competent skills necessary to make professional decisions in the identification and evaluation of optimal visual environments by means of analysis and critical reasoning.</p>	<p>At the end of this module, you should be able to do the following:</p> <p>Apply through competency in professional and clinical responsibilities, scientific optometric skills, optical and allied technologies to ascertain the accuracy of the prescription of the eye care products to visually compromised people.</p> <p>Apply scientific health care skills and optometric technologies in the interactive consultation of patient history while adhering to appropriate medico-legal ethics, health and safety regulations and codes of conduct.</p> <p>Apply scientific health care skills and optometric technologies in the examination of eye</p>

							<p>and eye related conditions within the context of health services appropriate to the needs of the community, while adhering to appropriate medico-legal ethics, health and safety regulations and codes of conduct.</p> <p>Interact consultatively in the diagnosis and proposed management and delivery of eye care products, therapy and medication to visually compromised people, with knowledge of minimum standards of optometric care and apply self-reflex learning strategies during interactions.</p> <p>Interact consultatively in the management and delivery of eye care products, therapy and medication to visually compromised people, with knowledge of minimum standards of optometric care and apply self-reflex learning strategies during interactions. Record and maintain legible, secure data and patient information while adhering to appropriate medico-legal ethics, health and safety</p>
--	--	--	--	--	--	--	--

							<p>regulations and codes of conduct stated in the patient charter.</p> <p>Manage and administer human, technical and other resources to ensure optimal diagnosis, prescription and delivery of eye and visual care products or services.</p> <p>Apply self-reflexive learning strategies to continually improve the optometrically related service within health care services appropriate to the specific needs of the patient/client to ensure professional contribution to the needs of the society.</p>
Contact Lenses 1	CTL00Y3	100%	0%	6	14	<p>The purpose of the module is to introduce the students to all aspects of contact lens fitting, this includes patient management, initial assessment, lens selection, detailed fitting procedures for both basic rigid and soft contact lenses as well as after-care.</p>	<p>At the end of this module, you should be able to do the following:</p> <p>Design and fit soft contact lenses</p> <p>Design and fit rigid contact lenses</p> <p>Conduct a thorough contact lens examination</p> <p>Examine and assess contact lens wearing patients on an on-going basis</p> <p>Recognize and diagnose the various contact lens induced physiological changes and pathologies</p> <p>Understand the optics of contact lenses</p>

Contact Lenses 2	CTL00Y 4	100%	0%	8	16	<p>This module will enable students to: determine the need and applicability for the fitting of contact lenses; recognize, diagnose and understand the causes of various contact lens related abnormalities as well as the alleviation thereof; understand the metabolism and physiology of the cornea as it relates to the fitting of contact lenses; fit advanced contact lens patients with keratoconus, orthokeratology, bifocal contact lenses, for sport, post-LASIK; understand the implications of fitting contact lenses and the possible results and abnormalities that may arise.</p>	<p>At the end of this module, you should be able to do the following:</p> <p>Describe and memorize various contact lens materials and their characteristic parameters.</p> <p>Describe and memorize corneal physiology as it relates to the fitting of contact lenses.</p> <p>Examine and appraise patients for their suitability to wear contact lenses. Formulate and design contact lens fitting strategies and contact lens parameters that are relevant to each individual patient. Recognize and diagnose the various contact lens induced physiological changes and pathologies.</p> <p>Examine and assess contact lens wearing patients on an on-going basis.</p> <p>Analyze and formulate strategies for the alleviation of contact lens related physiological and pathological changes in the contact lens wearing cornea.</p> <p>Diagnose and then formulate appropriate contact lens fitting strategies for the exceptional contact lens patient</p>
------------------	----------	------	----	---	----	--	--

							<p>(for example keratoconics, irregular corneas, post-LASIK corneas, bifocal contact lenses).</p> <p>Calculate appropriate mathematical and optical solutions to contact lens related problems.</p> <p>Make use of appropriate instrumentation in the examination of patients, and evaluation and quality-control of contact lenses.</p>
Dispensing Optometry 1	DOP00Y 2	100%	0%	6	8	<p>The purpose of the module is to enable learners to understand the basic principles and characteristics of ophthalmic lenses. With the knowledge and skills you will learn in this course it will enable you to verify a pair of spectacles and identify spectacle frames, frame types and parts and as well as to fit and adjust the frames on patients face. With this knowledge this will enable you to prescribe a complete pair of spectacles that will suit patient's needs.</p>	<p>The student should be able to:</p> <p>Identify lenses.</p> <p>Know the characteristics of the different type of lenses.</p> <p>Write and transpose a prescription in plus and minus cylinder form.</p> <p>Determine the powers of lenses by means of neutralization, lens measure and vertometer.</p> <p>Understand best form lenses.</p> <p>Understand lens measure and sagitta.</p> <p>Differentiate between thick and thin lenses.</p> <p>Understand prism and prismatic effect.</p>

							<p>Determine the prismatic effect of lenses in spectacle frames using the vertometer.</p> <p>Identify Aspheric Lenses.</p> <p>Identify the different multifocal lenses.</p> <p>Identify the different spectacle frame materials and parts.</p> <p>Select a spectacle frame suitable to the needs and prescription of the patient.</p> <p>Problem solving.</p>
Dispensing Optometry 2	DOP00Y3	100%	0%	6	8	<p>The primary purpose of this module is to prepare the student to recognize various patients' needs in terms of frame selection, lens materials, lens designs and verification, and dispensing (new and repaired) eyewear</p>	<p>At the end of this module, you should be able to do the following:</p> <p>Develop skills in frame selection and frame fitting to provide optimal visual efficiency, comfortable, attractive and meet the expectations of the patient.</p> <p>Follow procedures to order prescription spectacles and verify spectacles using a checklist approach to ensure a minimum of error, which in turn improves the quality of service to the spectacle wearer.</p> <p>Use of techniques to insert different lenses into different frame constructions.</p> <p>Apply fundamental principles and prerequisites to align</p>

							<p>and adjust spectacle frames.</p> <p>Repair and modify frames according to the needs of the patient.</p> <p>Choose the most appropriate protective eyewear to the patient's needs.</p> <p>Discuss special lens designs, their problems and the cosmetic appearance.</p> <p>Select the appropriate multifocal lens to the needs of the wearer, by identifying patient's needs, evaluate different designs, appropriate fitting techniques, patient selection and the problems that incorrect patient selection can experience.</p> <p>Match the appropriate lens treatment to the needs of the wearer.</p> <p>Makeup of a complete pair of spectacles, i.e. cutting, edging, and fitting lenses.</p>
General and Ocular Pharmacology	OPH00Y3	100%	0%	6	14	<p>This module will enable students to have a basic understanding of the most commonly used ocular pharmaceutical agents. The student will also be able to decide when</p>	<p>The student will be able to:</p> <p>Comprehend how basic pharmacological concepts work and will be able to differentiate the types of receptors found, how drugs work on these</p>

						<p>these agents will be used, for which ocular conditions, in which doses and what the contra-indications and side-effects will be.</p>	<p>receptors, and how various drugs interact.</p> <p>Integrate this knowledge with how different drugs are absorbed, administered, transformed and excreted by the human system. Certain commonly used pharmacologic abbreviations will be discussed.</p> <p>Demonstrate their knowledge relating to all the principles of ocular pharmacokinetics by applying it to related topics.</p> <p>Know the specific ocular formulations as well as the vehicles used for delivery, stability of these agents and how they are stored</p> <p>Demonstrate a clear knowledge of the two main components of the autonomic nervous system will be obtained. Also of importance is how they correlate and relate to the various pharmacologic agents</p> <p>Discuss the agents which are used for cycloplegic purposes</p> <p>Discuss the agents which are used for mydriasis and their various properties and reactions,</p>
--	--	--	--	--	--	---	---

							<p>adverse effects and types</p> <p>Apply knowledge to decide which agents to use for miotic purposes and understand their side-effects and actions.</p> <p>Understand glaucoma medications in terms of their mechanism of action, side-effects and properties to facilitate the understanding of the disease process and its management.</p> <p>Discuss all ocular local anaesthetics and will understand the mechanism of action, side-effects and precautions as well as indications for use of these agents.</p> <p>Discuss anti-microbial agents in terms of the various microbes involved and how to manage them. Structures of microbes will be learnt, which agent is best to use for the specific microbes and why.</p> <p>Decide which anti-inflammatory is the best to use for which condition and why. How the agents work and what the side-effects and special precautions are and when referral is necessary will also be understood.</p>
--	--	--	--	--	--	--	--

							<p>Gain knowledge on the different dry eye preparations, how they work and how and when to prescribe them. They will also integrate their knowledge of ocular pathology and contact lenses to decide when the agents are necessary.</p> <p>Gain knowledge of the different CL re-wetting solutions, their mechanism of action and indications for use. This will be integrated with CL knowledge to decide on a treatment plan.</p> <p>Gain knowledge of the ocular side-effects of commonly used systemic medications</p>
General Pathology for Optometry	OPA00Y 2	100%	0%	6	12	<p>The purpose of this module in General Pathology for Optometry is to enable you the student to:</p> <p>recognize and differentiate the various general pathological processes.</p> <p>explain how this may affect the health of the person and to reflect on how the situation can be resolved.</p> <p>recognize and differentiate the various pathological</p>	<p>You will be able to:</p> <p>Grasp the significance of pathology of important systemic diseases with significant ocular manifestations to Optometry</p> <p>Distinguish and categorize specific pathological problems associated with underlying systemic diseases based on their ocular manifestations</p> <p>Demonstrate an understanding of these specific pathological problems</p>

						<p>processes in hematological disorders and cardiovascular disease.</p> <p>appreciate interrelationships of ocular and systemic disease and recognize and identify underlying systemic diseases on the basis of their ocular manifestations.</p> <p>recognize and differentiate the various pathological processes in neurological diseases and endocrine disorders.</p> <p>appreciate interrelationships of ocular and systemic disease and recognize and identify underlying systemic diseases on the basis of their ocular manifestations.</p> <p>recognize and differentiate the various pathological processes in important systemic diseases with significant ocular manifestations.</p> <p>appreciate</p>	<p>Consolidate and integrate the pathological processes in the various organ systems</p> <p>Collect, analyze, organize, and communicate information on specific pathological issues</p>
--	--	--	--	--	--	--	---

						interrelationships of ocular and systemic disease and recognize and identify underlying systemic diseases on the basis of their ocular manifestations.

						familiarize you with pathology and/or deviations from the normal, particularly eye-system related pathologies, that you may encounter in a patient care setting. As a successful student, you should have the competence to appropriately manage and/or refer patients with eye-health related problems, especially posterior segment related diseases, while optimally utilizing specialized diagnostic equipment and techniques.	health related problems, especially posterior segment related diseases, while optimally utilizing specialized diagnostic equipment and techniques. The areas mentioned above will be assessed based on the required knowledge, skills and the approach that is deemed to be competent.
Ophthalmic Optics	OOP00Y 2	100%	0%	6	8	The primary purpose of this course is to introduce the role and function of ophthalmic lenses and the eye as an optical instrument, with emphasis on astigmatism. Ophthalmic lenses including the eye are studied with particular regard to surface geometry, sagitta, thickness, dioptric power, additivity, vergence, astigmatism, rays, prismatic effect, bifocals	At the end of this module you should be able to do the following: Understand the role and function of ophthalmic lenses particularly with regard to astigmatism. Make calculations concerning the geometry and dioptric power of lenses particularly with regard to astigmatism. Make calculations concerning lenses in relation to the eye.

						and varifocals. The course introduces the student to methods of representing dioptric power, quantitative analysis of dioptric power and optical systems. Linear optics is introduced and includes magnification, blur, and chromatic aberration at the retina, cardinal points and axes with specific application to vision.	<p>Understand the role and function of ophthalmic lenses particularly about prismatic effects.</p> <p>Make calculations concerning the deflection of rays by lenses including bifocal lenses.</p> <p>Make calculations concerning magnification, image size, blur associated with lenses and the eye with allowance for astigmatism.</p> <p>Make calculations of optical systems, particularly transferences and cardinal points.</p>
Optics	OPO00Y 2	100%	0%	6	12	Optics is the study of light, that part of the electromagnetic spectrum that falls into the visible region. The purpose of this module is to assist the student to understand the basics of light, how it works and its interaction with other transparent media and also how it interacts with itself. All these factors have an adverse effect on image formation through optical systems and may affect image quality and vision. This course provides the student with a broader understanding	<p>able to do the following:</p> <p>Discuss the different theories, describe the characteristics and explain the behaviour of light when it reacts with different media.</p> <p>Explain the concept of Vergence</p> <p>Differentiate between thin and thick lenses, optical systems and the magnifications obtained.</p> <p>Differentiate between the different types of aberrations induced by lenses, the theory of colour and understand the principles of photometry.</p>

						and insight of the finer aspects of how light passes through the different media as this plays an important role with lens design for optical instruments and spectacle lenses. This knowledge will help the student design optical systems and spectacle lenses that will improve image imperfections that will produce better optical quality instruments and spectacle lenses.	Describe the superposition, scattering and polarization of light. Classify Diffraction Evaluate the quality of optical systems
Optometry 1 Practical	OPP00Y 2	100%	0%	6	8	The primary purpose of this module is to obtain adequate practical skills to be competent in performing a comprehensive refraction and have the ability to analyse the results to manage general patients.	The learner should be able to: conduct a comprehensive case history perform preliminary tests perform retinoscopy Perform an accurate subjective refraction. Perform a comprehensive visual examination in the correct sequence and compare it to the expected norms. Perform additional procedures inclusive of ophthalmoscopy
Optometry 1 Theory	OPT00Y 2	100%	0%	6	8	The purpose of this module is to provide basic understanding and teach	At the end of this module you should be able to do the following:

						<p>fundamental concepts of</p> <p>The optical properties of the eye, including refractive conditions</p> <p>Visual function and its analysis</p> <p>Diagnostic instruments and their uses</p> <p>The performing of a basic refraction, including a good flow</p> <p>In addition to the subject content, the purpose should also be to:</p> <p>Instil disciplined and structured clinical practices</p> <p>Develop the ability to effectively communicate in the field of Optometry</p> <p>Develop the ability to identify problems</p>	<p>Define and explain the basic terms of visual function</p> <p>Diagram and perform calculations for the Gullstrand I, II and Reduced Eyes</p> <p>With regard to Visual Acuity:</p> <p>Describe the types and perform calculations</p> <p>Describe and apply the rules governing the Snellen Chart</p> <p>Describe the factors affecting Visual Acuity and apply them to cases</p> <p>Explain the different objective methods of testing Visual Acuity</p> <p>With regard to Contrast Sensitivity</p> <p>Describe the basic uses, testing procedure and contrast sensitivity function</p> <p>With regard to Emmetropia and Spherical Ametropia</p> <p>Describe and interpret the causes, signs and symptoms, and classification of Myopia</p> <p>Describe and interpret the causes, signs and symptoms, and classification of Hyperopia</p> <p>Describe the type of magnification, perform calculations</p>

HS12.9 DEPARTMENT OF PODIATRY

BACHELOR OF HEALTH SCIENCES IN PODIATRY (B9P01Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Anatomy and Physiology	ANTPHY 1	100%	0%	5	36	To enable students to gain an integrated understanding of anatomy, physiology and pathophysiology from the cellular level to the level of whole-body systems. It will provide a foundation in key scientific principles applicable to the human condition such as the introductory pharmacology and pathology	<ul style="list-style-type: none"> •Explain the chemical, cellular and tissue level of organisation of the body and the structure and function of the cell. •Describe the anatomy, physiology, and pathology of the body across the •Brain, Integumentary, Skeletal, Nervous, Cardiovascular (including blood, blood vessels and lymphatic system), Respiratory, Endocrine, Renal, Gastrointestinal (including nutrition),

						and medicine.	Urinary and Reproductive Systems. •Explain the cellular, tissue and systems responses to disease including cell death, inflammation, neoplasia, hypertrophy, hyperplasia, tissue responses to injury and repair.
Applied Pharmacology	APPHSY 4	100%	0%	8	10	Equip students with necessary knowledge, skills, attitudes, and insights required to make safe and effective prescription and use of medications in the management of podiatric related illness and or injury. Also, to equip students with insight and skills to be able to both understand and be able to deal with possible drug interactions.	•Demonstrate an in-depth knowledge of Pharmacokinetics and Pharmacodynamics and the implications of drug absorption, drug clearance, volume of distribution and half-life and the significance in patient management. •Discuss the implications of infection, the role of drug therapy and the concept of antibiotic resistance. •Describe and discuss the importance and complications of NSAID's and analgesic prescription with specific relevance to podiatry. •Describe the principles of local anaesthesia use in podiatry with specific emphasis on safe and effective administration of local anaesthesia in a clinical setting. •Describe and explain the mechanism of

							<p>Local Anaesthetic.</p> <ul style="list-style-type: none"> •Demonstrate the ability to formulate appropriate goal orientated pharmaceutical management plans for common podiatric conditions taking into consideration other medications the patient may be on. (E.g. for RA, Diabetes, HIV/AIDS, TB, HT, Mental conditions etc.) •Demonstrated an understanding of poly-pharmacy and its effects and restrictions on podiatric practice. •Demonstrated an understanding of both moral and medico-legal aspects of administration of drugs to patients
Basic Science: Chemistry	CHB1BB 1	50%	50%	5	6	<p>Units 1 - 4: Introductory concepts, bonding, and naming. These are introductory units that investigate the microscopic components of matter and explain how to link them to both the macroscopic properties of matter and the periodic table. Types of bonding are also discussed along with the conventions for naming inorganic compounds.</p>	<p>Equip students with chemistry learning outcomes applicable in several other areas in the degree; for example, pharmacology, physiology and applied pharmacology.</p>

						<p>Units 5 – 6: Balancing equations and chemical calculations - Stoichiometry</p> <p>These units deal with chemical formulas, balancing equations and associated chemical calculations. The concepts of percent composition, empirical formulas, mole to mass to atom conversions and calculations involving balanced equations (stoichiometry) are introduced and strategies used to solve them are presented and applied.</p> <p>Unit 7: Gases</p> <p>This unit provides students with information about the properties and uses of the types of gases used in the emergency medical care field.</p> <p>Unit 8: Water, aqueous solutions, acids and bases and pH</p> <p>This unit gives a theoretical overview of water and its associated properties.</p>	
--	--	--	--	--	--	--	--

						<p>Factors affecting solubility, different types of solutions, osmosis, and acids and bases are dealt with, and the concepts of pH and buffers are introduced.</p> <p>Unit 9: Organic Chemistry This unit deals with organic chemistry and it introduces organic chemistry dealing with the physical and chemical properties of the most common organic compounds including compounds like alcohols, ketones, organic acids, and carbohydrates, lipids, and proteins.</p> <p>Unit 10: Radioactivity This unit identifies the different types of radioactivity and explains the dangers and precautions associated with them.</p>	
Basic Science: Physics	PHB1AA 1	50%	50%	5	6	<p>This module is presented in accordance with the following sections:</p> <p>1.Units and the decimal</p>	Equip students with learning outcomes applicable in several other areas in the degree; for example, the concepts of motion, forces and mechanical

						<p>system:</p> <ul style="list-style-type: none"> •The decimal system and scientific notation. •Units and conversion of units. <p>2.Mechanics:</p> <ul style="list-style-type: none"> •Vectors in two dimensions. •Dynamics: Equations of motion for uniform motion. •Newton's laws applied to uniform motion on frictionless surfaces. •Work, momentum, energy and power. •Simple machines. <p>3.Hydrostatics:</p> <ul style="list-style-type: none"> •Density and relative density. •Archimedes' principle. •Pressure in static fluids. •Gas laws. <p>4.Heat transferring processes:</p> <ul style="list-style-type: none"> •Conduction, convection and radiation 	<p>advantage are applicable to the biomechanics and human gait understanding.</p>
Clinical Practice 1 (Practice)	CLPPHY 1	100%	0%	5	20	<p>Introduces the students to the practical examinations, basic skills in patient interaction, assessment as well as to the equipment important in managing a patient. It further introduces and equip the</p>	<ul style="list-style-type: none"> •Elicit a basic history and make basic notes from patient interview •Demonstrate professional, ethical patient interaction with patients and colleagues •Conduct a basic assessment of a patient •Demonstrate and perform basic assessment & treatment techniques on a

						students with the ability to handle documents and files relating to clinical work.	patient •Demonstrate basic knowledge of medical equipment used by podiatrist •Identify common podiatric complaints
Clinical Practice 2 (Practice)	CLPPHY 2	100%	0%	5	16	The purpose of this module is to equip the student with the ability to utilize their clinical skills in taking a clinical history, diagnose, examine including the use of special instruments and accurately manage all lower limb pathologies	•Demonstrate competency in the following clinical skills: assessing a patient's blood pressure, examine joint ranges of the foot & lower limb and to assess structures in and around the joints, assess muscle strength and musculature of each muscle group of each muscle compartment of the lower limb and assess the neurological & vascular status of a patient. •Demonstrate ability to: undertake a basic gait cycle & biomechanical examination, discuss laboratory tests utilized in podiatric investigations, interpret x-rays presented, and refer patients for radiographic examinations.
Clinical Practice 2 (Theory)	CLPTHY 2	100%	0%	5	16	The purpose of this module is to equip the student with the theoretical knowledge/ clinical skills in taking a clinical history, diagnose, examine including the use of special instruments and	Discuss and describe how and why to perform the following clinical skills: assessing a patient's blood pressure, examine joint ranges of the foot & lower limb and to assess structures in and around the joints, assess muscle strength and

						accurately manage all lower limb pathologies	musculature of each muscle group of each muscle compartment of the lower limb and assess the neurological & vascular status of a patient.
Clinical Practice 3 (Practice)	CLPPHY 3	100%	0%	6	18	Equips the student by bringing together all the relevant theoretical knowledge learned, and practical clinical skills from attending a wide variety of clinics both on and off campus where students are given responsibility to diagnose, and comprehensively manage both localized and systemic pathologies as they manifest on the lower limb, by means of invasive surgery, pharmacotherapeutics, and by prescription of specialised devices such as orthoses, insoles and padding. The module provides relevant practical clinical skills in Podiatric Biomechanics, Radiology, Physical examination of a patient, and introduction to advanced	Students can demonstrate integration of theory and practice in: Logical clinical history-taking The appropriate examination of the patient. The appropriate management of a patient. A patient file is comprehensively documented and correctly charted. •Patients are appropriately referred •Complete clinical skills with precision as detailed in the Skills assessment sheets •Clear and concise decision-making skills demonstrated for the prescription of orthotic devices •Skillful manufacture of orthotic devices

						Orthotic therapy in the management of foot and lower limb pathologies.	
Clinical Practice 3 (Theory)	CLPTHY 3	100%	0%	6	18	<p>Clinical Studies III provides the student with the ability to apply podiatric medicine principles in various clinical situations by using logic in explaining the resulting pathologies. The module also provides relevant theoretical knowledge and practical clinical skills in Podiatric Biomechanics, Diagnostic, Radiology, Physical examination of a patient, and introduction to advanced Orthotic therapy in the management of foot and lower limb pathologies.</p>	<ul style="list-style-type: none"> •Name and describe in detail all the necessary examinations that a patient may require. •Demonstrate an understanding of the different biomechanical principles and the role of biomechanics in the assessment and management of podiatric conditions. •Explain the mechanics of foot function and relate anomalies to abnormal foot function and pathology. •Institute and discuss the management of abnormal foot function using the various mechanical devices discussed. •Demonstrate an understanding of radiological modalities and be able to interpret and write a concise report on the image presented. •Be able to structure/ design comprehensive podiatric management strategy for high-risk patients. •Identify and describe the presentations of various dermatological conditions on the

							foot and lower limb and describe and discuss appropriate podiatric/ medical management of such conditions.
Clinical Practice 4 (Practical)	CLPHSY 4	100%	0%	8	22	This practical module aims to provide a transitional role by fully preparing students for independent clinical practice on its completion.	•Demonstrate competency in the performance of routine and specialised podiatric skills in order to competently assess, diagnose, treat and manage conditions and/or pathology affecting the foot and lower limb.
Clinical Practice 4 (Theory)	CLPTHY 4	100%	0%	8	20	The Clinical Practice IV module aims to provide the framework for the full integration of the academic components of the programme with the advancing skills and knowledge reflective of the NQF level 8 students during the final clinical practice component.	•Demonstrate ability to integrate relevant underlying theoretical knowledge learned, evidence and practical clinical skills in a wide variety of clinical settings both on and off campus where students are given responsibility to diagnose, and comprehensively manage both localized and systemic pathologies as they manifest on the lower limb, by means of invasive surgery, pharmacotherapeutics, and by prescription of specialised devices such as orthoses, innersoles and padding.
Health Management Systems	HMSPHB4	100%	0%	8	10	Introduce students to health management systems and an introduction to public health management	Demonstrate ability to ethically manage a clinical practice in all sectors of the community within the health care environment. Competently align

						structures.	and reflect on factors that might affect clinical decision making and is cognisant of relevant legislation governing healthcare in RSA.
Human Sciences	HUMSHY 1	50%	50%	5	20	<p>The following sections are covered in this module:</p> <ul style="list-style-type: none"> • Perception • Learning • Memory • Intelligence • Motivation & emotions • Altered states of consciousness • Psychopathology • Human development • Personality theories • Social psychology • Therapeutic communication • Self-awareness • Introduction to Sociology • Health and healthcare • Gender and feminism • Family/ culture and ethnicity • Death & bereavement 	At the end of the module students understand individual human behaviour and group dynamics. The module makes it possible for students to detect psychopathology and make appropriate referrals.
Introduction to Pharmacology	INTPHY 3	100%	0%	6	12	<p>The Pharmacology module introduces the principles of pharmacology and how generic groups of medications may interact with and affect human physiology. This subject requires</p>	<p>At the end of this module students are expected to:</p> <ul style="list-style-type: none"> • Describe scope of modern pharmacology including small molecule based therapies, protein based therapies (biopharmaceuticals), stem cell based therapies, gene based therapies • Explain the

						<p>students to link their understanding of physiology, pathophysiology and podiatric medicine to the prescription and administration of medications. Issues such as the legal requirements surrounding the procurement, use, and storage of medications are also covered. Each of the medications that are commonly prescribed and / or administered by podiatrists is dealt with in significant detail.</p>	<p>purpose and guidelines of drug schedules and legislation.</p> <ul style="list-style-type: none"> • Discuss the role of the legislating bodies with regards to pharmacology. • Provide insight into prescribing medicine (Section 22C licence) with regards to Section 22 of the Medicines and Related Substances Act, 1965 (Act 101 of 1965). • Discuss the factors that affect the shelf life of drugs and relate this to storage. • Describe different types of drug interactions and provide examples of medications that result in drug interactions • Discuss different types of drug dependence and provide examples of medications that cause dependence • Write a script • Discuss prescribing in special populations (pregnant women, children and elderly) • Discuss management of common toxic syndromes associated with major drug groups • Discuss the role pharmacoeconomics plays in

							treatment options
Medical Sciences	MEDSHY 1	100%	0%	6	12	This module will provide a basic yet broad foundation in the sciences that underpin the practice of Health Care Sciences.	It enables students to gain an introductory understanding of key biological concepts such as immunology, epidemiology, and microbiology.
Pathology and Medicine	PATMHY 3	100%	0%	6	24	The purpose of this module is introduce the learner to the aetiologies, signs and symptoms, assessment and management systemic conditions	Recognise and appraise systemic conditions and the signs and symptoms that impact on the foot and lower-limb for the purpose of treatment, referral and subsequent management.
Physiology 2	PHYGH Y2	100%	0%	6	24	Purpose of this module is that the learner understands the physiological mechanisms of the nervous system, reproductive system, cardiovascular/ circulatory system, lymphatic system, respiratory system. This will enable the student a better understanding as to why certain pathologies occur in the lower limb.	Students understands the physiological processes of the disease and can appreciate the difference between healthy and diseased physiological functions.
Pod Med: 4 Podogeriatrics	PDMGHY 4	100%	0%	8	10	Purpose of this module is that the learner understands the physiological mechanisms of the nervous	<ul style="list-style-type: none"> Describe the structure and the functions of the integumentary system and its associated appendages Describe

						<p>system, reproductive system, circulatory system, lymphatic system, respiratory system. This will enable to give the student a better understanding as to why certain pathologies to occur in the lower limb. The student will also have the ability to see the whole body as whole and not just focus on the limbs.</p>	<p>the physiological mechanisms involved in movement</p> <ul style="list-style-type: none"> • Explain the physiological mechanisms of communication, integration and control of the nervous system • Relate the structures and functions of the endocrine glands and reproductive organs to their functions • Describe the anatomy and physiology of the circulatory system. • Describe the structure and function of the immune system, highlighting the role of the lymphatic system. • Describe the anatomy and physiology of the respiratory system. • Describe the anatomy and physiology of the urinary system.
Pod Med: Podopaediatrics	PDMPHY 4	100%	0%	8	10	Podopaediatrics aims to equip students with knowledge and ability to identify, diagnose, and comprehensively manage both localized and systemic pathologies as they manifest on the lower limb in a paediatric patient.	Demonstrate competency in the performance of routine and specialised podiatric skills in order to clinically assess, diagnose, treat and manage conditions and/or pathology affecting the foot and lower limb in paediatric patients.
Pod Med: Sports Medicine	PDMSHY 4	100%	0%	8	10	Sports Medicine introduces students to the	Demonstrate competency in the performance of routine and

						field of sports medicine and equips them with knowledge and ability to identify, diagnose, and comprehensively manage both localized and systemic pathologies as they manifest on the lower limb in a sports patient.	specialised podiatric skills in order to clinically assess, diagnose, treat and manage conditions and/or pathology affecting the foot and lower limb sport patients/ patients presenting with sports related pathologies.
Podiatric Anatomy 2 (Practical)	PDAPHA 2	100%	0%	5	8	This module helps students to gain the relevant practical and functional lower limb anatomical background applicable to Podiatry.	Identify, describe the Surface anatomy and landmarks; Skeletal anatomy; Muscular anatomy; Cardiovascular anatomy; Neural anatomy as these relates to the foot and lower limbs.
Podiatric Anatomy 2 (Theory)	PDATHA 2	100%	0%	5	8	This module aims to enable students to gain the relevant theoretical lower limb anatomical background applicable to Podiatry	Discuss and provide clinical podiatric significance of Surface anatomy and landmarks; Skeletal anatomy; Muscular anatomy; Cardiovascular anatomy; Neural anatomy.
Podiatric Medicine 1 (Theory)	PDMTH Y1	100%	0%	6	24	The primary purpose of this module is to introduce you to the field of Podiatric Medicine. This will be achieved by introducing students to basic local and systemic disorders affecting the foot and lower limbs, basic pharmacology (Materia medica) and by equipping you	Discuss what is meant by ethical and professional behaviour. •Explain what a Podiatrist does and discuss their role in the health care system •Demonstrate ability to reason clinically. •Have basic knowledge of body systems, their assessments, systemic conditions and their effect on the foot and lower limbs.

						with basic skills in patient interaction, assessment as well as clinical reasoning.	•Knowledge of basic podiatric complaints, material medica and function of the foot.
Podiatric Medicine 2	PDMTH Y2	100%	0%	6	36	The purpose of the Podiatric Medicine II module is to introduce the student to the foot and lower limb conditions, their effect on the foot and lower limb and equips students' with the skills to identify, assess diagnose and manage these conditions.	<ul style="list-style-type: none"> •Competently identify, describe, assess and manage the forefoot conditions, hindfoot conditions, and ankle, knee and hip pathologies. •Demonstrate, examine, and choose the appropriate techniques in padding, strapping and casting for treatment of foot and lower limb conditions. •Interpret, evaluate and demonstrate the clinical investigations essential for confirming the diagnosis of presenting pathologies. •Discuss pharmacological management of foot and lower limb conditions.
Podiatric Medicine 3	PDMNHY3	100%	0%	8	32	The purpose of Podiatric Medicine III is to introduce students to foot and lower limb pathologies due to or as a complication of communicable and non-communicable systemic conditions.	Systemic diseases are defined; their clinical presentation, pathological course, podiatric and medical management and manifestation in the lower limb and foot are accurately described. Ulcers are accurately categorised and defined with the student being able to explain precisely the various

							<p>pathophysiology.</p> <ul style="list-style-type: none"> •Describe or discuss an appropriate podiatric management of the conditions studied based on the general medical and pharmacological management. •Able to identify and demonstrate an ability to identify ethical issues in a particular scenario; and demonstrate an ability to think and write critically about ethical consideration •Able to differentiate between upper and lower motor neuron lesions and be able to recognize temporary, progressive and permanent neurological damage from presenting clinical features.
Podiatric Orthotics 2 (Practice)	PDOPH Y2	100%	0%	6	8	This module also aims to equip students with the practical skills to confidently prescribed devices for patients with any abnormal biomechanical ailments.	Competently manufacture orthotics and design for CAD-CAM orthotic manufacture.
Podiatric Orthotics 2 (Theory)	PDOTHY 2	100%	0%	5	8	Orthotics theory aims to provide knowledge and basis for the use of external foot devices used to treat certain foot and lower limb pathologies. This module	Students should demonstrate integration of their understanding of anatomy of the foot and lower limb and podiatric medicine I and II, in prescribing and manufacturing these external foot

						capacitates the student with necessary skills to recognize, accurately diagnosis and treat foot problems through the prescription of external foot devices.	devices.
Podiatric Surgery	PODSH Y3	100%	0%	8	12	The purpose of the Surgery module is to introduce students to surgery techniques of the foot and lower limb and to develop and enhance your understanding of podiatric theory as it applies to surgical management of foot complaints	<ul style="list-style-type: none"> •Students must be aware of specific procedures that patient may need and refer to appropriate specialists. •Demonstrate understanding of the effect of orthopaedic procedures on the lower limb and spine. •Discuss, describe and demonstrate ability to competently perform podiatric surgical procedures.
Private Practice Management	PPMPH A4	100%	0%	8	8	Private Practice Management aims to provide students with a clear understanding of Private practice in terms of: Starting up a business, appointment systems, recording keeping and ethical tariffs, taxation, and insurance The importance of CPD Health risks	<ul style="list-style-type: none"> •Demonstrate ability to ethically manage a clinical practice in a private sector within the legislative framework. •Demonstrate an entrepreneurial ability.
Research Methodology	REMPHY 3	100%	0%	8	12	Aims to introduce the student to the concept of	Develop research skills and be aware of methodologies for conducting

						research and provides an important foundation for the research elective in the fourth year. This subject becomes very important for future academic progression as well as the ability to critically appraise new findings and publications in the field of podiatric medicine.	research within a podiatric and health sector. Discern the role and contribution of research the development of the profession. Critically reflect on research ethics and the significance of being a lifelong learner and a reflective practitioner.
Research Project and Dissertation	REPPHY 4	100%	0%	8	30	Assist students develop critical evaluation, methods of enquiry and an extended knowledge of contemporary developments as they undertake a research project.	Conduct a research project within a podiatric context to demonstrate good design technique, initiative, original thinking, and analytical skills.

HS12.10 DEPARTMENT OF SPORT AND MOVEMENT STUDIES

HIGHER CERTIFICATE IN SPORT ADMINISTRATION (F9SA1Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Communication and Computer Literacy	CCLSAA1	100%	0%	5	5	The purpose of the module is to provide students with the foundational computer literacy and communication skills needed in the coaching domain. The course is introductory and focuses on the	Complete the UJ online Computer proficiency test. Apply basic computer skills using the UJ Learning Management system / MSWord, Excel and PowerPoint for communication with parents, sponsors, sport

						development of core skills.	administrators and the media. Use effective communication with with parents, sponsors, sport administrators and the media Identify Cyber issues Address common communication issues with stakeholders such as parents, sponsors, sport administrators and the media are clearly discussed. The major communication problems common to the coaching profession are accurately identified and addressed
First Aid Level 1	FALSAB1	100%	0%	5	5	Students will be required to complete an accredited Level 1 First Aid course. The Certificate of Completion is to be submitted prior to the completion of the programme.	The successful student will be able to identify, describe and appropriately manage the following: Generic principles of first aid Common infectious diseases Generic actions in an emergency situation Trauma, injuries and multiple casualty incidents Patient assessment and history taking Asphyxia Drowning and near-drowning Shock Unconsciousness Brain disorders Cardiac disorders Burns Poisoning, bites and stings Environmental conditions Pregnancy and emergency

							childbirth
Financial Administration in Sport	FASSAB1	100%	0%	5	10	This module deals with financial management in sport and addresses issues such as budgets, financial planning in sport, and basic accounting with reference to the sport industry. This module aims to provide students with the intellectual competencies in the acquisition, analysis, interpretation and application of basic accounting concepts, such as budgeting, financial planning, and financial statement analysis. Learners will be guided in terms of application as well as assessment of the principles, disciplines and practices of Sport Finance in a holistic context.	Distinguish between three different types of companies. Explain the various purpose of financial statements and the different users. Distinguish between industry comparative analysis and time-series analysis. What is the difference between fixed costs and variable costs? Distinguish between future value and present value. Explain the discounted cash flow techniques. Explain accounting as a system. Classify different items as noncurrent asset; current asset; noncurrent liability; current liability; owner's equity; income and or expense. Calculate VAT. Distinguish between manufacturing costs and nonmanufacturing costs.
Facility, Competition and Event Administration	FCESAY1	100%	0%	5	10	The purpose of the module is to introduce the student to the principles of facility and event management in sport. Effective events and facility management requires organisational abilities, multitasking,	Explain accurately the key requirement for effective events and facility management; Demonstrate an understanding of the organisational activities and requirements for a successful event; Demonstrate an understanding of the skills needed

						communication skills, creativity, problem-solving, attention to detail, the ability to work to deadline and negotiation and marketing skills. Students will be introduced to the various requirements in each of the areas.	to manage a sport facility or event. Develop an appropriate logistics event plan.
Human Resource Administration in a Sport Club	HRASAA1	100%	0%	5	10	The purpose of this module is to acquire the required knowledge and skills to administer the human resources of a sport club effectively. Topics covered are the human resources in sport clubs, volunteers and volunteerism, job design, staffing, recruitment, induction, appointment development and appraisal of performance of human resources.	Identify and describe the different human resources in a sport club or recreation organisation; Gain some insight into the economic significance of volunteer organisations such as a sports clubs; distinguish between job simplification, job rotation and job enlargement; Describe the purpose and focus of job analysis, job description and job specification; define leadership and describe forms of leader behaviour; Discuss the process by which individuals are motivated in an organisation; define and describe values and distinguish them from attitudes and norms; explain why human resource development should take place in an organisation; define the process of performance appraisal and explain its

							purpose;
Introduction to Sport Marketing and Administration	IMASAA1	100%	0%	5	10	Implement the administrative component of a marketing plan of a sport club, event and competition.	Provide a definition of sport marketing. Explain why doing marketing research is important to a business. Define a target market. Explain what the marketing mix is. List what elements of the marketing mix. Define sponsorship. Explain the reasons for sponsorship. Explain the term 'Ambush Marketing'
Principles and Administration of Coaching	PACSAA1	100%	0%	5	5	The purpose of Principles and ministration of coaching in Sport Administration is to provide learners with knowledge, skills and competencies to ensure professional, ethical and effective administration as well conducting of sport coaches accros various sporting codes. This module also has the purpose of teaching the	To be able to understand and explain the principles of coaching. To be able to understand and explain the role of a sport coach To to acknowledge and discuss the qualities of a good coach To be informed of how to deal with a rude coach. Have gained some insight regarding the role of the basic sport science in football

						students the basic skills and a way of understanding what it takes to be an excellent coach.	
People with Disability in Sport	PDSSAB1	100%	0%	5	5	The purpose of the module is to provide students with the basic principles of coaching athletes with disabilities. The module also introduces students to the sport code and event classification of athletes.	Demonstrate the ability to distinguish correctly between the different types of physical and intellectual disability and the classification thereof within a variety of sports codes. Identify correctly the key role players for disability sport at national and international level. The distinction between physical and intellectual disability is accurately identified and described. The various classifications required for athlete participation in sport are correctly differentiated and applied. National and international disability structures and organisations in sport are correctly identified and differentiated.
Sport and Club Administration	SCASAY1	100%	0%	5	20	The purpose of the module is to introduce students to the various areas of administration of a sport club. These include distinguishing between management and administration, identify stakeholders of	Debate the difference between management and administration within the context of a sport/recreation club. Identify and describe the different stakeholders and their roles in a community sport

						<p>a local sport club, develop a process to start a community sport club, plan and develop a basic sport club constitution, develop a committee structure for a local sport club, debate the role of meetings as well as that of the members of meetings, plan the administration of equipment in a sport club as well as developing a risk plan for a local sport club.</p>	<p>or recreation club. Explain the different steps and argue each to start a sport club. Describe the role and purpose of a sport club constitution. Compile a constitution for a sport club. Explain the different positions and their roles on a sport club committee. Describe the requirements and format of an agenda of a meeting and accompanied minutes. Distinguish between the different types of sport equipment and administration thereof in a club. Discuss and apply the principles of the development of a risk plan for a sport club.</p>
Sport Leadership and Ethics	SLESAB1	100%	0%	5	10	<p>The purpose of the module is to demonstrate to students the leadership skills and strategies required for coaching within an ethical framework. The module introduces students to a variety of leadership styles and approaches, with a view to developing an effective and proficient coach.</p>	<p>Demonstrate the ability to distinguish between and select from different types of leadership styles, indicating which is more effective and why. Demonstrate an understanding of the need for a personal coaching vision and the importance of a code of conduct. Demonstrate an understanding of the importance of the ethical framework within which a coach must operate.</p>
Self-Management	SMDSAA1	100%	0%	5	5	<p>The purpose of the module is to</p>	<p>Demonstrate the skills needed to</p>

and Personal Skills Development						develop the inter- and intra-personal skills needed for coaching within the four domains. The module provides for the development of a self-reflective approach to coaching and to coach as educator.	manage his or her time effectively; Demonstrate the techniques needed to manage communication effectively. Demonstrate an appreciation of the need for a personal coaching philosophy. Develop an appropriate coaching philosophy, and the components thereof.
Work Integrated Learning (WIL)	WILSAY1	100%	0%	5	15	The purpose of this module is to acquire the competency to apply sport administrative knowledge in practical situations effectively. Competencies relates to human resource, financial, marketing, leadership and event administration experiences in a sport club or recreation centre.	Take the minutes of a meeting correctly and that is in line with the agenda of the meeting. Describe how the sport organization plan and implement the selection and induction of a newly recruited staff member (coach, instructor). Develop a mascot as marketing instrument for a sport club/organization Explain why is budgeting important Indicate how often is the budget revised Indicate how employee contribution and leadership is acknowledged at the club / centre. Devise a plan on how the club / centre could have a small activity to acknowledge employee contribution and leadership every month during staff meetings. Reflect on the planning and

							implementation referring to the aspects when planning, implementing and evaluating an event.

DIPLOMA IN SPORT MANAGEMENT (D9S01Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Business Management 1A	BMA01A 1	50%	50%	5	12	The purpose of this module is to introduce students to the main themes and concepts of Business Management, the business environment and its interactive sub-environments. Furthermore, students will be provided with a global overview of general management as a management function and prepare them for challenges in the South African business environment. This module is designed to provide the student with intellectual competencies, practical skills and an understanding of management based on historical and modern approaches as well as the management tasks, namely planning, organising,	Students should be able to: explain the role of business in society, considering the needs and resources of the community, the main economic systems. identify and explain the internal and external business environment and the interaction between an organisation and its environment. introduce and elaborate corporate citizenship. identify and describe management activities. explain introductory entrepreneurship and the different types of entrepreneurs; and identify and explain the four primary management tasks

						leading and control.	
Business Management 1B	BMA01B 1	50%	50%	5	12	The purpose of this module is to develop the students' fundamental theoretical and academic knowledge to provide them with an overview of management functions and prepare them for challenges in the South African business environment. This module will also develop the student with fundamental academic knowledge, intellectual competencies, and practical skills on how to apply the functional areas of a business.	Students should be able to: Discuss and explain five different management functions: Finance; Human Resource Management; Information; Marketing; External Communication and Public Relations; and Operations and Supply Chain.
Business Management 2A	BMA02A 2	50%	50%	6	16	The purpose of the module is to promote an understanding of two tasks, planning and organising, within the interpretation and application of a systems approach.	Students should be able to discuss in detail: planning within the context of an organisation; implementation of planning within an organisation. organising within the context of an organisation. coordination within an organisation; and an organisational structure.
Business Management 2B	BMA02B 2	50%	50%	6	16	The purpose of the module is to promote an understanding of the two management	Students should be able to discuss in detail: different approaches in leadership;

						tasks, leading and control, in an organisation through the interpretation and application of a systems approach.	motivation; the approaches to communicating; the difference between business operations and quality management; and the performance measures, control and risk.
Business Management 3A	BMA03A 3	50%	50%	6	16	The purpose of this module is to introduce students to the main themes and concepts of strategic management and its functions within the corporate context. Students will be provided with intellectual competencies, practical skills and an understanding of the comprehensive strategic management processes, which will equip them to manage under VRIN (Valuable, Rare, Inimitable and Non-Substitutable) conditions in a global environment.	Students should be able to: appraise the term 'strategic management', its origin, what it encompasses and what its function is within the corporate context in a commercial or non-commercial setting. identify and compare the different types of philosophies concerning strategic management and motivate the main guidelines or considerations dictating its deployment; by using authoritative sources, select an appropriate comprehensive corporate strategic management framework or model and explain the essential phases or steps involved in this process; reflect upon VRIN capabilities necessary for changing environments; and explain how the strategy is implemented and evaluated in a business; and describe and reflect upon the macro-

							importance of building learning organisations and world class organisations in South Africa.
Business Management 3B	BMA03B 3	50%	50%	6	16	The purpose of this module is to provide the student with knowledge, interpretation, and an understanding of risk management in any organisation. This module will further develop an appropriate understanding of global trends in sustainability as well as the possibilities for responding and adapting to operating efficiently within dynamic environments.	Students should be able to: reflect upon the principles, concepts and practice of risk and risk management reflect on local and global trends in sustainability development distinguish between the priority areas for sustainability interventions. reflect upon the tenets of managing and leading in the face of complexity (change, stakeholder demands, requirement for operational efficiency, with limited resources); and demonstrate an ability to show flexibility, openness and a willingness to respond according to the situation.
End-User Computing A	EUC01A 1	50%	50%	5	16	The purpose of this module is to introduce the students to basic information technology (IT) terms, skills and the basic components of a computer. The students will be able to manipulate files and use word processing application to	Students should be able to: explain concepts and terms associated with information technology (IT); demonstrate the ability in using common functions of a pc and its operating system; demonstrate the ability to use a word processing application on a computer; and

						solve business problems and to use presentation software.	demonstrate the ability to use a presentation application on a computer.
End-User Computing B	EUC01B 1	50%	50%	5	16	The purpose of this module is to use spreadsheet applications and database application software to solve business problems. The students will also be able to search the internet and utilise e-mail.	Students should be able to: explain concepts and terms associated with using the internet. demonstrate the ability to use e-mail software on a computer; demonstrate the ability to use a spreadsheet application on a computer; and demonstrate the ability to use a database on a computer.
English 1A	PME1AA 1	50%	50%	6	16	To introduce students to the field of English literary studies, to the distinguishing characteristics and techniques associated with fiction, and to the fundamental critical thinking and essay writing skills required in literary analysis.	Upon completion of this module students should be able to: recognise a limited range of narrative techniques common in fiction; demonstrate basic skills in essay planning and writing; present the main ideas of a critical analysis, by means of close reading of passages from narrative texts.
English 1B	PME1BB 1	50%	50%	6	16	To introduce students to the field of English literary studies, to the distinguishing characteristics and techniques associated with poetry and drama, and to the fundamental critical thinking and essay writing skills required in literary analysis.	Upon completion of this module students should be able to: recognise a limited range of dramatic techniques common in modern and Shakespearean plays; recognise a limited range of poetic techniques common to poetry. demonstrate basic skills in essay planning and writing.

							present the main ideas of a critical
Marketing 1A	MAR01A 1	50%	50%	5	16	The purpose of this module is to introduce the student to the basic principles of marketing, mainly in a consumer product context. On a practical level, the student will have attained the necessary experience to identify environmental trends, understand basic consumer behaviour and market segmentation.	Students should be able to: understand the fundamental marketing concepts and philosophy, explain the interface between marketing management and the environment, identify customer needs and wants and determine which target markets the organisation can serve best, understand the decision-making process that consumers go through as they make a purchase, understand the role of segmentation, targeting and positioning in marketing, and recognise the importance of information to an organisation.
Marketing 1B	MAR01B 1	50%	50%	5	16	The purpose of this module is to introduce the student to the basic principles of marketing, mainly in a consumer product context. On a practical level, the student will be familiar with the product, pricing, distribution and promotion elements of the marketing mix.	Students should be able to: define and classify products, understand the nature and benefits of branding, identify the functional and psychological roles of packaging, understand the role of product in the marketing mix, explain the role and types of distribution channels,

							<p>understand the concept of pricing in marketing,</p> <p>understand the importance and role of a planned, integrated communication strategy in a marketing context, and</p> <p>explain how the marketing mix is integrated in the overall marketing philosophy.</p>
Marketing 2A	MAR02A 2	50%	50%	6	16	<p>The purpose of this module is to equip the student with the necessary knowledge to distinguish between the additional aspects of services and relationship marketing in service businesses. On a practical level, the student will be familiar with the people, process and physical evidence elements of the marketing mix as well as techniques to build relationships with employees and customers.</p>	<p>Students should be able to:</p> <p>describe the principles of consumer behaviour in a service environment.</p> <p>understand the role of people, process and physical evidence in the services marketing mix.</p> <p>understand and apply the principles of relationship marketing; and</p> <p>design services marketing mix.</p>
Marketing 2C	MAR02C 2	50%	50%	6	16	<p>The purpose of this module is to acquire knowledge, practical skills and competencies for applying the principles and concepts of marketing within a sport and recreational setting; to sport products, sport consumers and sport entities. On a</p>	<p>Students should be able to:</p> <p>identify and describe the unique characteristics of sport marketing;</p> <p>describe the difficulties of the exchange process in sport marketing;</p> <p>develop a basic operational marketing</p>

						practical level these will be applied to sport consumer behaviour, marketing communication and sponsorships, as well as carry out a basic research survey in a sport environment.	plan for a small sport enterprise; show the application of marketing instruments in a sport setting; and identify and apply the principles of marketing research.
Public Relations 1A	PRL1AA 1	50%	50%	5	16	To introduce the student to the principles and practice of Public Relations.	Upon completion of this module students should be able to: understand the concepts in the broader field of Communication Management; explain how Public Relations has evolved as a result of shifts in Public Relations approaches; understand the current approaches and their challenges.
Public Relations 1B	PRL1BB 1	50%	50%	5	16	To provide the student with an understanding of the environmental contexts in which Public Relations is practised.	Upon completion of this module students should be able to: understand systems thinking within the context of Public Relations practice; understand the impact of the different environmental contexts on the practice of Public Relations; identify the impact of trends on professional Public Relations practice.
Sport and Physical Recreation Studies 3A	SPR3AA 3	100%	0%	7	16	Didactical aspects of sport and Growth and Maturation is presented in this module.	During this module students will be introduced to clients, their needs and development and how it influences their leisure preferences.

							However, unique groups of people in our community and their specific requirements will be focuses on in the second semester module, Sport and Physical Recreation 3B.
Sport and Physical Recreation Studies 3B	SPR3BB 3	100%	0%	7	16	An aspect of Sport Psychology and Perceptual motor development is presented in this module.	During this module students will be introduced to the concepts of Sport Psychology and Perceptual motor development and how it related to special populations.
Sport Management 1A	STM1AA 1	100%	0%	5	16	The module focusses on General management in sport. The applied principle of Business Management is presented in this module. This module deals with aspects of sport as a business as well as how sport is administrated.	Be able to apply the knowledge and related general management skills such as planning, organising, leading and control in micro sport environments such as the management of a small sports enterprise such as a team or sports club.
Sport Management 1B	STM1BB 1	100%	0%	5	16	This module deals with Leisure and Recreation management. Aspects of recreation programming and creation of leisure activities are addressed.	The purpose of this module is to introduce students who are pursuing a career in Sport and Recreation to the various concepts of leisure and how the concepts connect with each other and interact.
Sport Management 1C	STM11Y 1	100%	0%	5	16	This is a practical module where first year students experience the rules, coaching	This year module, the first of three-year modules in your qualification,

						activities and presenting the activities of various sporting codes.	introduces students to six popular sporting codes in South Africa. Aspects such as rules, equipment and history of each sporting code will be focused on to provide students with the necessary basic knowledge which they need when pursuing a career in Sport and Recreation in South Africa
Sport Management 2A	STM2AA 2	100%	0%	6	16	This module addresses Human Resource and people management from a sport perspective	is to equip students with an in-depth grounding in Human Resource knowledge, theory, principles and skills so that they may contribute to the multi-functional, multinational public and business sectors, confidently executing analytical, interpretive, strategic and integrative skills relating to Human Resource
Sport Management 2B	STM2BB 2	100%	0%	6	16	This Module deals with financial management in sport and addresses issues such as budgets, financial planning in sport, and basic accounting with reference to the sport industry.	This module deals with Financial management in sport and addresses issues such as budgets, financial planning in sport, and basic accounting with reference to the sport industry. This module aims to provide students with the intellectual competencies in the acquisition, analysis, interpretation and application of basic accounting concepts, such as budgeting, financial planning, and financial statement analysis. Learners will

							be guided in terms of application as well as assessment of the principles, disciplines and practices of Sport Finance in a holistic context.
Sport Management 2C	STM22Y 2	100%	0%	6	16	Second year students present various aspects of different sporting codes.	This year module, the second of the three in the qualification, assists students in being able to demonstrate and teach six popular sporting codes in South Africa. Based on the knowledge gained in Sport Management 1C, the student will now be able to present these sporting codes to various participants.
Sport Management 3A	STM3AA 3	100%	0%	7	16	Event management is the focus of this module.	The purpose of these modules is to perform general middle management responsibilities in a sport and recreation environment. Learners must be able to apply the management functions in the fields of event management.
Sport Management 3B	STM3BB 3	100%	0%	7	16	Facility management is the focus of this module.	The purpose of these modules is to perform general middle management responsibilities in a sport and recreation environment. Learners must be able to apply the management functions in the fields of facility management.
Sport Management 3C	STM33Y 3	100%	0%	7	16	Third Year students manage the activities of the various sporting	This final year module assists students in being able to manage those sporting codes

						codes presented.	they have been taught over the course of two years (Sport Management 1 and 2C).

BACHELOR OF COMMERCE IN SPORT MANAGEMENT (B9S14Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Content
Accounting A	ACC0AA1	50%	50%	5	12	CBE module Purpose The purpose of this module is to cover the basic concepts of accounting, the recording of various elementary transactions and the accounting cycle. This forms the basis for further modules in the analysis, interpretation and application of accounting. The only further module for which Accounting A is an acceptable credit is Accounting B. Accounting A and Accounting B are not modules sufficient to allow entry into any accounting module on a second-year level.	CBE module Outcomes Students should be able to: <ul style="list-style-type: none"> • discuss and apply the basic concepts in accounting; • discuss and record simple transactions with reference to the accounting equation; • account for information in the general ledger; • journalise simple transactions; • prepare a trial balance and detect and correct trial balance errors; • discuss the accounting cycle; • discuss and apply the different inventory methods to calculate profit; • identify, measure, present, disclose and record the different asset categories in the annual financial statements for basic transactions; • calculate, journalise and disclose depreciation using different methods; • calculate, journalise and disclose the amortisation of intangible assets; • identify, measure, record, present and disclose the disposal

						<p>of assets;</p> <ul style="list-style-type: none"> • adjust the ledger accounts according to the accrual basis; • record transactions in the relevant subsidiary journals; • apply the basic principles of value-added tax; <p>discuss and record transactions in the receivables and payables control accounts;</p> <ul style="list-style-type: none"> • discuss and apply the reconciliation of receivables and payables with their respective lists; • identify, explain, calculate and record: sales or trade discount; settlement or cash discount; bad debts and allowance for credit losses; • present receivables and payables in the statement of financial position; • define inventories according to IAS 2 Inventories; name, discuss and apply the different methods to measure the cost of inventories; • define, calculate and measure net realisable value, fair value and lower of cost; • record transactions relevant to inventories; • present and disclose inventories in the financial statements; • discuss and record all cash transactions; and • reconcile the balance of the bank account per the general ledger with the balance per the bank statement.
--	--	--	--	--	--	--

Accounting B	ACC0BB 1	50%	50%	5	12	CBE module The purpose of this module is to further develop the basic principles of accounting taught in Accounting A with reference to specific scenarios and entities. Accounting A and Accounting B are not modules sufficient to allow entry into any accounting module on a second-year level.	CBE module Students should be able to: Non-trading entities: <ul style="list-style-type: none"> • prepare a statement of receipts and payments and financial statements in respect of non-trading entities; • account for transactions in the general ledger; and • identify, explain, calculate, record, present and disclose receivables, payables, inventories, cash and property, plant and equipment. Partnerships: <ul style="list-style-type: none"> • discuss and apply the principles of partnerships; account for information in the general ledger of a partnership; and • prepare financial statements of a partnership. Company financial statements: <ul style="list-style-type: none"> • discuss the company as a form of entity briefly; • discuss, calculate and record share transactions of a simple nature; and • prepare the following components of the annual financial statements of a company according to the minimum requirements of the Companies Act (71 of 2008) and International Financial Reporting Standards: statement of financial position; statement of comprehensive income; statement of changes in equity and accounting policies and explanatory
--------------	-------------	-----	-----	---	----	---	--

						<p>notes.</p> <p>Statement of Cash flow:</p> <ul style="list-style-type: none"> • a simple statement of cash flow with notes, under the following headings, is prepared in accordance with IAS 7 Statement of Cash Flows: - cash flows from operating activities; - cash flow from investing activities; - cash flow from financing activities; and - net change in cash and cash equivalents. <p>Budgets:</p> <ul style="list-style-type: none"> • calculate and prepare a cash budget, budgeted statement of comprehensive income, budgeted statement of changes in equity and budgeted statement of financial position; and • prepare cash budgets and budgeted financial statements.
Analytical Techniques A	ATE01A 1	50%	50%	5	15	<p>Science module A</p> <p>A student credited with this module will have developed a basic ability to define terms commonly used in Statistics, to show how a set of data can be organised in a meaningful way and presented to reveal or enhance its fundamental properties. The student will also be able to measure and model the linear relationship between two variables. A</p> <p>Science module</p> <p>Students should be able to:</p> <ul style="list-style-type: none"> • demonstrate the ability to use statistical terminology in the appropriate way and distinguish between different measurement scales; • show how the raw data can be tabulated and presented graphically; • calculate and interpret measures of central tendency and spread for a set of data and perform elementary probability calculations; • identify different methods used to gather sample data and understand the

						student credited with this module will have developed a basic ability to analyse a time series, understand and implement the basic concepts of probability, probability distributions, sampling distributions and elementary matrix operations.	basic concepts of sampling distributions and statistical inference; • show how to analyse a time series and forecast values for future time periods; and • determine and use least squares regression lines and the coefficients of correlation.
Analytical Techniques B	ATE01B 1	50%	50%	5	15	Science module To develop a basic understanding of inferential statistics and the ability to apply the methodology to a variety of business oriented problems. This module is also intended to equip students with mathematical skills involving the differential and integral calculus and the optimisation of functions subject to constraints and to apply these to understand modern theories about the functioning of the economy	Science module Students should be able to: • apply various inferential methods to data; • apply the rudiments of the differential and integral calculus to business applications; and • find the maximum or minimum of a multivariable function subject to linear constraints on the variables.
Anatomy & Physiology 1A	ANP01A 1	100%	0%	5	8	The purpose of this module is for the learner to develop intellectual competencies and practical skills in the analysis, interpretation and application of the neuromuscular	<ul style="list-style-type: none"> • Describe in detail the structural and functional divisions of the nervous system. • Define the neuron; name the important structural components as well as their functional role. • Describe the

						<p>and cardiorespiratory systems in the field of Anatomy and Physiology.</p>	<p>importance of the myelin sheath and classify the neurons according to structure and function.</p> <ul style="list-style-type: none"> • Understand the role of the membrane ion channels. Describe the resting membrane potential and define depolarization, hyperpolarization and action potential. Describe the initiation of an action potential as well as the threshold value and “all-or-none” law. • Name the main regions of the brain and their functions, the subdivisions of the brain stem, protective layers of the brain and the anatomical structure of the spinal cord. • Define the peripheral nervous system and its components. • Classify the sensory receptors according to its structure, registered stimulus and where they are located in the body. • Describe the roles of the parasympathetic and sympathetic divisions. • Discuss the microscopic anatomy of skeletal muscle, the motor unit and the sliding filament theory. • Discuss the stretch reflex, and force, velocity and
--	--	--	--	--	--	--	---

							<p>duration of skeletal muscle contraction.</p> <ul style="list-style-type: none"> • Describe in detail the structural and functional units of the cardiovascular system. • Describe the events of cardiac muscle cell contraction, and the physiological systems at work in the heart. • Describe the structural components of blood vessels and explain the various physiological aspects of blood vessel function and circulation. • Describe the structural and functional units of the respiratory system. • Describe the physiological mechanisms involved in breathing and gaseous exchange in the body; and explain the transport of oxygen and carbon dioxide by blood.
Anatomy & Physiology 1A	ANP01B 1	100%	0%	5	8	<p>The purpose of this module is for the learner to develop intellectual competencies and practical skills in the analysis, interpretation and application of the renal and endocrine systems, hematology, buffer systems and digestion in the</p>	<ul style="list-style-type: none"> • Describe the gross anatomy of the kidneys and its coverings, trace the blood supply through the kidney and describe the anatomy of a nephron. • Describe the mechanisms of urine formation. • Briefly describe the physiology of the ureters, bladder, urethrae as well as micturition.

						field of Anatomy and Physiology.	<ul style="list-style-type: none"> • Describe water, electrolyte and acid-base balance in the body. • Understand the roles of various electrolytes on maintaining the acid-base environment in the kidneys. • Chemically classify hormones, describe two major mechanisms by which hormones bring about their effects on their target tissues, and explain how hormone release is regulated. • Name the major endocrine organs, the hormones they secrete and name their physiological effects. • Relate the composition and functions of blood. • Describe the process of haemostasis. • Describe the blood group types. • Give an overview of the digestive system.
Business Management 1A	BMA11A 1	50%	50%	5	12	CBE module The purpose of this module is to introduce students to the main themes and concepts of Business Management, the business environment and its interactive sub-environments. Furthermore,	CBE module Students should be able to: <ul style="list-style-type: none"> • explain the role of business in society, considering the needs and resources of the community, the main economic systems; • identify and explain the internal and external business environment and the interaction between an organisation and its

						<p>students will be provided with a global overview of general management as a management function and prepare them for challenges in the South African business environment. Sport and Exercise Science Practice 3B	SEPSH3 B	100%	0%	7	15	The purpose of this module is to acquire the knowledge needed to diligently conduct measurement and evaluation techniques in sport with the comprehensive application of exercise science theories, principles and concepts to the result findings. The programme serves to develop your understanding and integration of theory into tangible application within a sporting context.	Students should be able to apply knowledge on, and conduct measurement and evaluation techniques in sport with the comprehensive application of exercise science theories, principles and concepts to the result findings.
Talent Identification and Long-Term Athlete Development 3A	TIDSH3 A	100%	0%	7	15	<p>Purpose: aims to introduce students to talent identification and development and how it has been historically approached and misused</p> <p>Focus on the reconciliation of both mass participation and talent development.</p>	<ul style="list-style-type: none"> • Demonstrate and understanding of natural gift and talent • Distinguish between what talent ID from a multi-disciplinary perspective • Define and discuss ethical challenges of long-term athlete development.

BACHELOR OF BIOKINETICS (B9S15Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Content
Anatomy 1	ANNA01Y1	100%	0%	5	20	The purpose of this module is to provide in-depth information regarding the different anatomical structures within the human body, including various systems, such as osteology, the nervous system, cardiovascular system, endocrine system, respiratory system, digestive system, urinary system and muscular system.	Anatomical Terminology 1. Describe the origins of anatomical terms and explain the significance of “ Terminologia Anatomica 2. Describe different body regions, body sections and relative positions by utilizing anatomical terms. 3. Identify the major body cavities of the trunk and subdivisions 4. Define body and joint movements using correct anatomical terms Basic Histology 5. Identify the four major types of tissues in the body and describe the function 6. Discuss the types and function of epithelium 7. Describe the three main categories and function of connective tissue (connective tissue proper, fluid

						<p>and supporting connective tissue)</p> <p>8. Describe the three types of muscle tissue and the special structural features of each type</p> <p>9. Discuss the basic structure and role of the nervous system</p> <p>Introduction to Osteology</p> <p>10. Describe a structural overview of the skeleton</p> <p>11. Describe the anatomy of the axial and appendicular skeleton (identification, classification, bone markings and muscles attachments)</p> <p>12. Describe the anatomy of the joints of the human body (structure, classification, characteristics, structures stabilizing joints including ligaments and cartilage and joint movement)</p> <p>Nervous System</p> <p>13. Describe the structural and functional divisions of the nervous system</p> <p>14. Describe the structure and</p>
--	--	--	--	--	--	---

						<p>function of the components of a typical neuron and classify neurons on the basis of the structure and function</p> <p>15. Discuss the location and functions of the various types of neuroglia</p> <p>16. Identify the major brain regions, vesicles and ventricles, and describe the location of each</p> <p>17. Explain how the brain is protected and supported and discuss the formation and circulation CSF</p> <p>18. Identify the primary sensory, motor and association areas of the brain and relate these to their functions</p> <p>19. List the main components of medulla oblongata, pons, midbrain, cerebellum, spinal cord, diencephalon and limbic system</p> <p>20. Discuss the location, names and function of the twelve pairs of cranial nerves</p> <p>21. Describe the structure and functions of the</p>
--	--	--	--	--	--	--

						<p>sympathetic and parasympathetic division of the autonomic nervous system</p> <p>22. Specify the components of the afferent and efferent divisions of the somatic nervous system</p> <p>23. Discuss the structure of the spinal cord and spinal meningeal layers and describe the components of the spinal nerves</p> <p>24. Explain the roles of white and grey matter in processing and relaying sensory information and motor commands of the spinal cord</p> <p>Endocrine System</p> <p>25. Briefly describe the structure and function of the major endocrine glands and tissues and provide the location of each</p> <p>Senses</p> <p>26. Identify the internal and accessory structures of the eye and explain the anatomy of each</p> <p>27. Describe the structure of the external, middle and internal ear</p>
--	--	--	--	--	--	--

						<p>28. Explain the location, structure and function of joint, muscle and tendon receptors, e.g. the Golgi-tendon organ and muscle spindles</p> <p>Cardiovascular System</p> <p>29. Describe the anatomy of the heart (including nerve and vascular supply, pericardium structure, layers of heart walls, chambers and heart valves)</p> <p>30. Describe the flow path of blood through the heart and lungs</p> <p>31. Identify and describe the structure of the major blood vessels</p> <p>Respiratory System</p> <p>32. List the components of the respiratory airways and describe the structural and functional classification of these components</p> <p>33. Describe the gross anatomy and histology of the following respiratory airways: nasal cavity, pharynx, larynx, trachea, bronchi,</p>
--	--	--	--	--	--	---

							<p>bronchioles, alveoli</p> <p>Digestive System</p> <p>34. Identify the organs of the digestive system</p> <p>35. Describe the histology of the digestive tract</p> <p>36. Discuss the anatomy of the oral cavity, pharynx, oesophagus, stomach, small and large intestines and accessory organs of the digestive system (liver, pancreas and gallbladder)</p> <p>Urinary System</p> <p>37. Identify the organs of the urinary system</p> <p>38. Describe the location and structure of the kidneys</p> <p>39. Identify major blood vessels associated with each kidney and describe the structure of a nephron</p> <p>40. Describe the structures of the ureters, urinary bladder and urethra</p> <p>Reproductive System</p>
--	--	--	--	--	--	--	---

						<p>41. Introduction to the Muscular System</p> <p>42. Apply the correct terminology related to skeletal muscle</p> <p>43. Describe the arrangement of fascicles in the various types of muscles and explain the functional differences</p> <p>44. Explain how the names of muscles can assists in identifying the location, appearance and function</p> <p>45. Identify the muscles of the axial and appendicular skeleton and name the muscle or group of muscles innervated by the cranial nerves or somatic nerve plexuses</p>
Biokinetics 1	BIK01Y1	100%	0%	5	30	<p>The purpose of this module is to introduce the student/learner to the field of Biokinetics, the human body, health and fitness.</p> <ul style="list-style-type: none"> · Describe where and how the Biokinetics profession developed and how it fits into the SA health care industry. · Identify selected ethical and legal issues involved in being a Biokineticist. · Demonstrate a functional understanding of

							<p>the neuro-musculoskeletal system.</p> <ul style="list-style-type: none"> · Perform simple anatomical analyses of common movements. · Explain the role of exercise and screening in promoting wellness and in preventing certain non-communicable diseases. · Conduct and interpret basic health and physical fitness assessments. · Apply the FITT-VP principle to exercise prescription for healthy populations · Identify the symptoms, aetiology and treatment of common sports injuries. · List basic prevention strategies used to prevent different sports injuries. · Explain the 3 different rehabilitation phases used in Biokinetics.
Biokinetics 2	BIK01Y2	100%	0%	6	30	The purpose of this module is to learn more about the fields of wellness, chronic conditions, and	1. Explain the importance of the 17 sustainable development goals (SDGs) and explain how SDGs apply in the context of

						<p>lower limb conditions.</p> <p>Biokinetics in South Africa.</p> <p>2. Demonstrate an understanding of the impact that the social determinants of health has in the context of Biokinetics in South Africa.</p> <p>3. Reflect on the importance of corporate wellness programs from a Biokinetics perspective and how corporate environments incorporate these.</p> <p>4. Discuss the benefits and applications of the different types of therapeutic modalities within orthopaedics</p> <p>5. Explain the injury pathology, prevalence, symptoms, aetiology and treatment of lower limb injuries/conditions.</p> <p>6. Perform Biokinetic assessments of various lower limb orthopaedic injuries.</p> <p>7. Interpret the results of Biokinetic assessments of various lower limb injuries and design appropriate exercise rehabilitation programmes for patients with lower</p>
--	--	--	--	--	--	--

							<p>limb injuries by applying the FITT-VP principle for each of the three different phases of Biokinetic rehabilitation.</p> <p>8. Explain the criteria used to discharge a patient or to return an athlete to his/her sport.</p> <p>9. Discuss injury prevention strategies for the lower limb in Biokinetics.</p> <p>10. Explain the prevalence, symptoms, aetiology and treatment of chronic conditions (Hypertension/CAD ; Diabetes Mellitus; Obesity).</p> <p>11. Explain the Biokinetic assessment of various chronic conditions.</p> <p>12. Interpret the results of assessments of various chronic conditions.</p> <p>13. Discuss appropriate exercise programmes for patients with chronic conditions taking the FITT-VP principle into account.</p>
Biokinetics 3	BIK01Y3	100%	0%	7	30	The purpose of this module is to develop theoretical and clinical reasoning	<ul style="list-style-type: none"> Recognize the causes, symptoms and prevalence of different conditions Understand the

						skills in the different fields of Biokinetics (Chronic Conditions, Wellness and Orthopaedics).	different evaluations available for each condition <ul style="list-style-type: none"> • Design rehabilitation interventions for different conditions • Screening and prevention of non-communicable diseases • Promotion of health • Reflect on the effectiveness of exercise and other therapeutic interventions.
Biokinetics 4	BIK01Y4	100%	0%	8	30	The purpose of this module is for the learner to develop intellectual competencies related to the fields of Wellness, Orthopaedic Conditions and Chronic Diseases, and to reflect on the effectiveness of exercise in the prevention and treatment of these conditions. Learners should also become familiar with the analysis and discussion of case studies. In addition, learners should be able to integrate their knowledge during the interpretation and analysis of complex case studies to suggest appropriate assessments and interventions. Learners should have a detailed	<ul style="list-style-type: none"> • Discuss the approaches and involvement of a multidisciplinary team in Biokinetics rehabilitation. • Discuss the Biokinetics treatment of different orthopaedic case studies presented. • Discuss the different rehabilitation modalities and protocols to follow pre- and post-operatively in various surgeries. • Discuss the role of exercise in special populations groups. • Analyse various chronic case studies (cardiovascular disease, diabetes type 1 & 2, cardiopulmonary disease, HIV/AIDs, neurological diseases and cancer, use sound clinical reasoning and make informed decisions regarding the correct treatment required.

						working knowledge of exercise in its different forms and which type of exercise to prescribe.	
Biomechanics 2A	BMS01A 2	100%	0%	6	15	<p>The purpose of this module is for the learner to develop intellectual competencies and clinical skills in biomechanics and the assessment of health and fitness. The learner should be able to solve biomechanical problems, perform basic biomechanical analyses and be able to assess basic health and fitness components.</p>	<p>Explain the concepts of static and dynamic biomechanics.</p> <p>Solve biomechanical calculations, using scalar and vector quantities:</p> <ul style="list-style-type: none"> - Displacement, velocity and acceleration (projectile motion) - Momentum - Torque - Energy and work <p>Differentiate between the three types of lever systems in terms of their structure and function.</p> <p>Describe the influence of centre of gravity on balance and stability.</p> <p>Understand how biomechanics integrates with the disciplines of exercise physiology, ergonomics, physical therapy and sports medicine.</p>

							<p>Explain the interactions between the neuromuscular system and movement.</p> <p>Perform basic biomechanical analyses of movement-related tasks.</p>

							<p>principles throughout.</p> <p>Apply strategic planning skills and knowledge in a biokinetics context.</p> <p>Discuss the most important financial aspects of establishing and running a Biokinetics practice.</p> <p>Reflect on human resources and supervision/mentoring of individuals, teams and subordinates within the value system of the profession.</p> <p>Demonstrate knowledge of the basic management functions and competencies in different biokinetic practice/health care facility contexts.</p> <p>Reflect on entrepreneurial skills required for establishing of a Biokinetics practice.</p>
Perceptual Motor Learning and Control 2B	PML01B2	100%	0%	6	10	<p>The purpose of this module is to analyse motor development across the life span from infancy through older adulthood. Movement patterns and their developmental sequences, and</p>	<p>Describe the theories associated with motor development and identify the basic tools used by researchers in motor development.</p>

						<p>the underlying mechanisms that are related to changes in these aspects will be studied. The processes of acquiring new skills and movement patterns and the correction of faulty movement patterns will be addressed. Learning will be facilitated with class discussions and examples; this will allow the learner to implement theory in real-life.</p>	<p>Outline the principles of motion and stability that lead to proficient motor performance and explain how skilled performers take advantage of these principles.</p> <p>Describe the course of body growth and aging over the life span, review the role of genes during early physical growth and development, identify typical patterns of growth while recognizing individual differences in the timing of growth, and distinguish between growth and maturation.</p> <p>Consider the individual, environmental, and task constraints interacting during infancy and describe how both task and environmental constraints can have a profound effect on the emergence of motor skills.</p> <p>Define the concept of locomotion in humans, describe the types of locomotion and discuss the development of</p>
--	--	--	--	--	--	--	--

							<p>specific locomotor patterns.</p> <p>Identify developmental changes in throwing, kicking, punting, and striking movements.</p> <p>Discuss developmental changes in the vision, audition, and kinaesthetic systems that occur with aging.</p> <p>Discuss the role of sociocultural constraints in motor development and define the role of specific social agents, such as parents and schools, in individual development.</p> <p>Explain the relationship between social influences and an individual's feeling of self-esteem and discuss the effect of self-esteem on motivation to participate in sport and physical activity.</p>
Psycho-Social Aspects of Physical Activity	PSA01B 1	100%	0%	5	15	The purpose of this module is to acquire the knowledge of various theories utilized within psychology and sociology, and how these theories and	1.List important foundational theories about psychology and sociology and explain how they are linked to Biokinetics

						<p>human behavior impact on physical activity. The module also focus on the wellness aspect and related physical activity performance.</p> <p>2. Explore the human psyche and health behaviour, health promotion (wellness), human functioning and performance</p> <p>3. Describe basic motivational and interviewing skills used within a therapeutic or Biokinetics context</p> <p>4. Describe the role of negative psycho-social factors on an individual in terms of therapeutic exercise adherence</p> <p>5. Explain the psycho-social stratification within the South African community</p> <p>6. List and explain the different phases of grief following a catastrophic life event</p> <p>7. Describe selected coping strategies related to trauma, pain and loss</p> <p>8. Explain the long-term effects of stress/distress on health and wellness</p> <p>9. Discuss diversity in terms of culture, gender, income.</p>	
Research Methodology	RME01A 3	100%	0%	7	15	<p>This module is aimed at encouraging the student to</p>	Describe and apply the scientific method.

						<p>conduct research by giving them the required knowledge of specific approaches and methods (qualitative and quantitative) and skills employed in applied research.</p>	<p>Explain the terminology used in research and source academic publications.</p> <p>Identify components of a literature review and analyse published research.</p> <p>Describe and discuss qualitative, quantitative and mixed-methods approaches to research.</p> <p>Contrast a range of research designs and methods in terms of their strengths and weaknesses.</p>
Therapeutic Recreation 1B	TPR01B 1	100%	0%	5	15	<p>The purpose of this module is to provide an overview of therapeutic recreation and its position within Biokinetics. Included in the module is the assessment and exercise prescription within therapeutic recreation for special populations and to inform on the processes to utilise to overcome barriers within this context.</p>	<p>1. Explain the historical development of therapeutic recreation</p> <p>2. Describe selected evidence-based models and approaches to therapeutic recreation</p> <p>3. Explain assessment and documentation in therapeutic recreation</p> <p>4. Perform basic assessments in the context of therapeutic recreation</p>

							<p>5. Develop a therapeutic intervention program for apparently healthy and for different special populations (e.g. obese patients)</p> <p>6. Explain basic concepts of leisure education and how to eliminate barriers to participation</p> <p>7. Describe how adherence to therapeutic exercise could be facilitated from a behaviour change perspective</p> <p>8. Participate in at least one therapeutic recreation program and reflect on your experiences</p> <p>9. Describe the different dynamics at play for group therapy vs individual rehabilitation</p>
Work Integrated Learning 1	WIL01Y1	100%	0%	5	10	<p>The purpose of this module is to learn practical clinical skills in the following field: Wellness, Orthopaedic Conditions, and Chronic Conditions. Learners should learn clinical skills in assessment techniques, intervention strategies and the</p>	<p>1. Document a minimum of 100 hours of clinical observation and the prescribed number of skills and patient case studies in a portfolio of evidence</p> <p>2. Obtain written proof for the hours worked (signed log sheet)</p>

						re-assessment of patients.	<p>3. Observe or participate in screening, assessments and exercise prescription for apparently healthy and low-risk individuals and groups</p> <p>4. Assist with administrative duties and observe practice management strategies (e.g. patient bookings, admin and referrals, ...)</p> <p>5. Demonstrate professional behaviour during clinical rotations</p> <p>6. Reflect on your experiences by writing a summary report; comment on positive and negative experiences, what you learned and any ethical dilemmas you experienced</p> <p>7. Complete Basic Life Support Level 1 certification</p>
Work Integrated Learning 2	WIL01Y2	100%	0%	6	10	<p>The purpose of this module is to learn practical clinical skills in the following fields of biokinetics: Wellness, Orthopaedic Conditions, and Chronic Conditions. BACHELOR OF COMMERCE HONOURS IN SPORT MANAGEMENT (H9S05Q)
BACHELOR OF ARTS HONOURS IN SPORT SCIENCE (H9S03Q)

Name	Code	SM Weight	EM Weight	Level	Credits	Purpose	Outcome
Exercise Physiology	HMS8X08	100%	0%	8	18	The purpose of this module is to acquire knowledge and develop your understanding and intellectual competencies of relevant physiological	Learners should develop intellectual competencies in the analysis, interpretation and application of physiological principles in the

						theories, principles and concepts relevant to the sport phenomenon.	fitness and health-, coaching and teaching sectors of the sport industry.
Exercise Science	HMS8X09	100%	0%	8	18	The purpose of this module is to acquire knowledge and develop your understanding and intellectual competencies of relevant exercise science theories, principles and concepts relevant to the sport phenomenon.	Learners should develop intellectual competencies and practical skills in the analysis, interpretation, and application of exercise science principles in the fitness and health-, coaching and teaching sectors of the sport industry.
Facility and Event Management	HMS8X12	100%	0%	8	15	To obtain relevant knowledge, skills, competencies and attitudes in the development and management of sport facilities.	Learners should be able to debate factors that should be concerned in the development of a sport facility; Describe and analyse the different systems and operational aspects of a sport facility. Develop an event management plan at a sport facility; Argue the components of an effective facility administration system; and to design a risk plan as well as a monitoring and evaluation system for a sport facility.
Human Resource Management in Sport	HMS8X13	100%	0%	8	12	To obtain relevant knowledge, skills, competencies, and attitudes in the management of human resources in sport.	Learners should be able to discuss and argue the different human resources in the sport industry; Debate the roles of volunteers and volunteerism in sport; Apply leadership and motivational

							theories in the sport context; Position the human resources environment within the legislative environment in South Africa; and to apply the concepts of talent identification, recruitment, induction, and remuneration within the context of sport.
Research Methodology	HMS8X03	100%	0%	8	30	This module is aimed at encouraging the student to conduct research by giving them the required knowledge of specific approaches and methods (qualitative and quantitative) and skills employed in applied research.	<p>Learners should be able to describe and debate the principles underpinning a successful research proposal; Apply techniques when searching and reading scientific literature; Differentiate and apply principles of quantitative and qualitative research methods.</p> <p>Discuss the importance and implications of research ethics.</p> <p>Formulate and conduct sound research presentations using PowerPoint slides; Perform data analysis in various methodologies; and debate the concepts of a null hypothesis, alternative hypothesis, type I error and type II error.</p>

Sport Finance	HMS8X15	100%	0%	8	12	To obtain relevant knowledge, skills, competencies, and attitudes in the management of financial resources in the sport industry.	Learners should be able to develop and analyse financial statements; Develop strategies for financing sport organisations and/or initiatives; Describe and develop the time value of money; and compile and analyse budgets, including current and capital budgets.
Sport Management Practice	HMS8X16	100%	0%	8	18	To obtain relevant knowledge, skills, competencies, and attitudes in the practice of the management of sport.	Learners should be able to experience sport environments that relates to the theoretical training of the programme; Apply theoretical knowledge in a practical sport situation; Shadow experienced sport managers in different sport contexts; Engage in discussions with peers on the practical application of learned theory; and reflect on the practical environment of a sport manager.
Sport Marketing	HMS8X14	100%	0%	8	12	To obtain relevant knowledge, skills, competencies, and attitudes in the marketing of and through sport.	Learners should be able to develop a marketing plan for a sports organisation and/or project; Assess and evaluate the effects of a marketing plan in sport and recreation environments; Distinguish between marketing

							of sport and marketing through sport; and describe and debate disciplines and practices of Sport Marketing in a holistic context of marketing
Sport Psychology	HMS8X10	100%	0%	8	12	The purpose of this module is to introduce students to the basic tenants of sport psychology including psychological readiness for peak performance (including competition and training), social facilitation, stress, anxiety and motivation as interventions for performance. Students will also examine antidoping and mental toughness in sport.	Learners should understand the major sport psychological themes, the psychology of peak performance, talent detection and development, exercise psychology, intervention strategies for exercise adherence, drug abuse in sport, and career termination/transiti on in sport.
Sport Science Practice	HMS8X11	100%	0%	8	30	The purpose of this module is to acquire the knowledge needed to diligently conduct measurement and evaluation techniques in sport with the comprehensive application of exercise science theories, principles and concepts to the result findings. The programme serves to develop your understanding and integration of theory into tangible application within a sporting context.	Students should be able to apply knowledge on and conduct measurement and evaluation techniques in sport with the comprehensive application of exercise science theories, principles and concepts to the result findings.

Sport Sociology	HMS8X17	100%	0%	8	12	To obtain relevant knowledge, skills, competencies, and attitudes in the context of sport related to sport in society, politics, gender, race, ability, commercialization, and different models in sport.	Learners should be able to reflect on the value of the study of sport in society within the context of production; Argue the theoretical approaches to different issues in sport and society – politics of sport, sport nationalism and national identity, economy in sport and its relationship with transnational companies, sponsorships and commercialization; Debate the reciprocal role of the media in sport within the global context; Explain sport related violence in the context of society utilizing case studies; and distinguish between the sport+ and +sport models.
Sport Vision	HMS8X19	100%	0%	8	15	After completion of this module learners should be able to recognise and differentiate the various visual-perceptual and visual-motor abilities. They should be able to appreciate inter-relationships of ocular and motor systems and recognise and identify underlying systemic deficiencies on the basis of their visual manifestations. From this they should	Learners will be capable of independently demonstrating: The identification of visually related problems in sport and promote solving by improving visual requirements in sport. Work effectively with all stakeholders to promote effective vision in sport. Designing,

						<p>be able to design and implement different visual enhancement programs.</p>	<p>organizing and managing interventions in practice as well as in the community.</p> <p>Skills as a consultant who can integrate scientific knowledge with clinical insight to diagnose and manage visual-motor disorders.</p> <p>Communication skills in effectively improving visual aspects involved in sport.</p> <p>The use of science and technology effectively for promoting the assessment and visual enhancement of participants in sport.</p> <p>Reflecting on and exploring various strategies in the practice, fieldwork, internet, and other sources, to learn more effectively.</p> <p>A contribution to a full range of opportunities in the sports science environment.</p>
--	--	--	--	--	--	---	---

Strategic Management in Sport	HMS8X18	100%	0%	8	12	To obtain relevant knowledge, skills, competencies, and attitudes in the strategic management of sport.	Learners should be able to develop and analyse strategic approaches in sport organisations; A argue the relationship between the strategy, vision, mission, core values of the strategic plan of a sport organisation; Complete an environmental scanning and analysis as basis for a strategic analysis of a sport organisation; Debate and discuss the value and proposition of managing change in a sport organisation, utilizing examples from the recent decade; and to distinguish between leadership and organizational culture.
-------------------------------	---------	------	----	---	----	---	---
