

SHORT LEARNING PROGRAMME

INTRODUCTION TO ETHICS IN HEALTH RESEARCH

This short learning programme is designed to introduce fundamental principles, practices and procedures of health research ethics for health Research Ethics Committee (REC) members (or prospective members) so that they can fulfil their role on a REC effectively. This programme is also suitable for members of Departmental Research Committees (or other research committees) who would like greater insight into health research ethics.

Topics covered: Day 1 - History and guiding principles of research ethics, informed consent, benefits, risks and harms, research involving minors and laboratory research. Day 2 – Vulnerability and incapacity, privacy and confidentiality, ethics and law, retrospective data use, clinical trials and integrity in health research. Passing a written assessment is a requirement for successful completion of this programme.
