

KAGISO MABE

CAREER OBJECTIVE

My short-term objective is to obtain my PhD in Information Management (September 2023), as I would love to make a telling contribution to the field. Moreover, I look to be one of the best researchers in the field by continuing to explore the ever changing field and implications of emerging environments. My objective in the long-term includes serving as one of the premier consultants in data management, analysis and governance, management information systems development, producing insights and intelligence using data and big data, social media data analytics, and records and knowledge management. The doctorate will further elevate me, in future, to a Professorial position in the institution I currently work for, or other academic institutions.
