A close-up photograph of a person's hand typing on a laptop keyboard. The person is wearing a textured, brown knit sweater and a black watch with a metal band. Overlaid on the image is a stylized world map composed of white geometric shapes (polygons) connected by thin white lines. Small orange dots are placed at various points on the map, and thin orange lines radiate from these dots across the map, suggesting a global network or digital connectivity. The background is a warm, textured surface, possibly wood or stone.

University of Johannesburg  

The best way to predict your future is to reimagine it.

The fourth industrial revolution (4IR) is transforming the world faster than the speed of life.

While its promises are limitless in possibility, it also has the potential to leave people behind. As we have learnt from the previous three industrial revolutions, the future belongs to those who embrace change (however uncomfortable) and equip themselves with the necessary knowledge and skill to emerge stronger, more relevant and sought-after.

At UJ we fully recognise the paradigm-shifting significance of 4IR in Africa and inculcate it into our vision for attaining global excellence and stature. This philosophy makes us more qualified than most to enhance the academic prowess of our students and faculty, intensify their learning experience, pioneer new forms of teaching and optimally prepare graduates, post-graduates and lecturers to thrive in this brave new world, to the benefit of all. It also ensures that we pursue relevant, practical academic research to contribute effectively to a 4IR society.

Because at UJ, we believe the future belongs to those who reimagine it.

**4IR will change
the world –
we're on it**
